Edward Jackson Scott, 28 Public drunkenness, open container, possession of paraphernalia (LPD)

Daniel Kevin Snell, 44 Public drunkenness (LPD)

Andrew Jordan Vermilyea, 20 Forgery- over $100 (LPD)

Terrance Walker, 30 Domestic violence- 2 counts, contempt of court (LPD)

Roland M. Wilkinson, 39 Possession of paraphernalia, open container, public drunkenness (LPD)

Rose Lee Williams, 29 Probation violation (MDOC)

This is a list of suspects who were arrested by local law enforment officials for serious offenses over the past few days:
JCSD: Jones County Sheriff's Department; LPD: Laurel Police Department; EPD: Ellisville Police Department; SPD: Sandersville Police Department; MDOC: Miss. Department of Corrections; MHP: Miss. Highway Patrol

Expungement Clinic at Cameron Center

People who have suffered a setback because of their criminal record are invited to attend an expungement clinic from 10 a.m.-noon Saturday at the Cameron Center (711 N. 10th Ave., Laurel). Many people who have been arrested and/or convicted of a misdemeanor or felony have been denied jobs, access to public housing or public benefits because of a criminal record.

The clinic is an opportunity for them to learn more about the expungement process so that they remove convictions from their records and move on. Participants should bring a valid I.D., a copy of their criminal record and an adjudication certification.

GUNS

Chief Stewart wanted to make it a high priority," said officer Layne Bounds of the LPD Special Op-

stolen from Laurel. One of the weapons was reported stolen from Ohio, where it is believed that an organization is stealing guns from residents and pawn shops, then ferrying them to the Laurel area, where they are being sold on the

tenced July 27, 2010 to two years' probation and a year on house arrest for cocaine possession. He was released to probation on July 27, 2011 for the crime that he committed in 2007.

In 2013, he was sen-

2013 Annual Drinking Water Quality Report
Oak Grove Water Association
PWS ID: 0340011
June 2015

We are pleased to present this year's Annual Water Quality Report. This report is designed to inform you about the quality w and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking w We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water comes from three (3) deep wells that draw w from the Catahoula Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its dr water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibili determinations were made has been furnished to our public water system and is available for viewing upon request. The wel the Oak Grove Water Association have received lower to moderate rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Teresa Robertson at 601-477-926 want our valued customers to be informed about their water utility. If you want to learn more, please join us at any of our re scheduled meetings on the second Monday of the month at 7:00 p.m. at the Oak Grove Water Association well site.

We routinely monitor for constituents in your drinking water according to Federal and State laws. The table below lists all of drinking water contaminants that were detected during the period of January 1 to December 31, 2014. In cases where monit wasn't required in 2014, the table reflects the most recent results. As water travels over the surface of the land or through th ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from s treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and met which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil a production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urba storm-water runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, are by-products of industrial processes and petroleum production, and can also come from gas stations, and septic systems; a radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water pr by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indic that the water poses a health risk.

In the table below you will find many terms and abbreviations with which you might not be familiar. To help you better understand these t we've provided the following definitions:

AL: Action Level - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system m follow.

MCL: Maximum Contaminant Level - The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLG feasible using the best available treatment technology.

MCLG: Maximum Contaminant Level Goal - The level of a contaminant in drinking water below which there is no known or expected risk to MCLGs allow for a margin of safety.

MRDLG: Maximum Residual Disinfection Level - The highest level of a drinking water disinfectant allowed in drinking water. There is convin evidence that addition of a disinfectant is necessary for control microbial contaminants.

ppm: parts per million, or milligrams per liter (mg/L) - one part per million corresponds to one minute in two years or a single penny in $10,

ppb: parts per billion, or micrograms per liter (µg/L) – one part per billion corresponds to one minute in 2,000 years, or a single penny in $10,000,000.

TEST RESULTS

Contaminants	Violation Y/N	Date Collected	Level Detected Your Water	Range of Detects or # of Samples Exceeding	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
8. Arsenic	N	2014	1	0.6 [illegible]	ppb	n/a	10	Erosion of natural deposits; runoff from
