Rockhill Community Water Association
Public Water Supply Name

0530017
List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH.** ***Please check all boxes that apply.***

Customers were informed of availability of CCR by: ***(Attach copy of publication, water bill or other)***

- ☒ Advertisement in local paper (attach copy of advertisement)
- ☐ On water bills (attach copy of bill)
- ☐ Email message (MUST Email the message to the address below)
- ☐ Other_____

Date(s) customers were informed: 05/30/2015, ___/___/___, ___/___/___

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used_____

Date Mailed/Distributed:___/___/___

CCR was distributed by Email (MUST Email MSDH a copy) Date Emailed:___/___/___

- ☐ As a URL (Provide URL _____)
- ☐ As an attachment
- ☐ As text within the body of the email message

CCR was published in local newspaper. ***(Attach copy of published CCR or proof of publication)***

Name of Newspaper: Starkville Daily News

Date Published: 05/30/2015

CCR was posted in public places. ***(Attach list of locations)*** Date Posted:___/___/___

CCR was posted on a publicly accessible internet site at the following address (**DIRECT URL REQUIRED**):

_____

CERTIFICATION

I hereby certify that the 2014 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

Lane joins Cadence Bank advisory board

Staff reports

Local businesswoman Pat Lane has joined Cadence Bank's advisory board, according to a news release issued by the bank.

"I am extremely honored to have the opportunity to serve an organization that has been a part of this community for more than 100 years," Lane said. "Cadence has a seasoned team of bankers who have deep roots in this community and are experts in their fields. I look forward to being a part of their outstanding advisory board."

Lane

Lane has been a real estate broker in the Starkville area for nearly 40 years. Lane was recognized as Coldwell Banker's top producer in Mississippi from 1998 to 2001.

The board is lead by Jimmy Abraham, vice chairman of client and business relations and Jerry Toney, Mississippi bank president and senior financial consultant. Members on the advisory board include Jeff Adkerson, Nelle Cohen, Alveria Crump, Dr. Wesley Ferguson, Jack Forbus, Dr. John Forde, William Hilbun, Dr. Andrew Martin, Markeeta Outlaw, Dr. Allison Pearson, Jeff Read and Dr. Roy Ruby.

Cadence Bank has three locations in Starkville.

For more information on Cadence Bank, visit www.cadencebank.com

Thousands view B.B. King on eve of funeral

By EMILY W. PETTUS
Associated Press

INDIANOLA — Blues guitarist Buddy Guy says he always intended to tour the B.B. King Museum while its namesake, his longtime friend, was still living.

The 78-year-old Guy was among more than 4,000 people who filed past King's open casket at the museum Friday, the eve of the blues legend's funeral in the Mississippi Delta.

"His left hand was a special effect," Guy said, describing King's talent for bending strings to make the guitar sing.

"These young people playing, you punch a button and you get a vibration," Guy said. "He didn't need that. He invented that."

King was 89 when he died May 14 at his home in Las Vegas. A public viewing and invitation-only memorial service were held in that city before his body was flown to Memphis, Tennessee, for a tribute Wednesday.

A funeral is set for Saturday at a Baptist church in the King's hometown of Indianola, Mississippi. He is scheduled to be buried during a private service at B.B. King Museum and Delta Interpretive Center.

King's public viewing Friday was almost like a state funeral, with Mississippi Highway Patrol officers in dress uniform standing at each end of the casket. Two of his black electric guitars — each named Lucille — stood among sprays of flowers.

Music fans Stuart and Anita Caven of Edinburgh, Scotland, had already planned their vacation in the United States before King died. After visiting New Orleans, they drove to Indianola and stood among the throngs outside the museum as King's casket was rolled out to a hearse after the public viewing.

"We have a deep respect for what came from the blues," Stuart Caven said.

George "Buddy" Guy, a Chicago blues and electric blues guitarist speaks about B.B. King's technique with reporters after filling past the casket during a public viewing on Friday in the B.B. King Museum and Delta Interpretive Center in Indianola. **(Photo by Rogelio V. Solis, AP)**

Horse park to host 4-H show today

By Jim Gaines
editor@starkvilledailynews.com

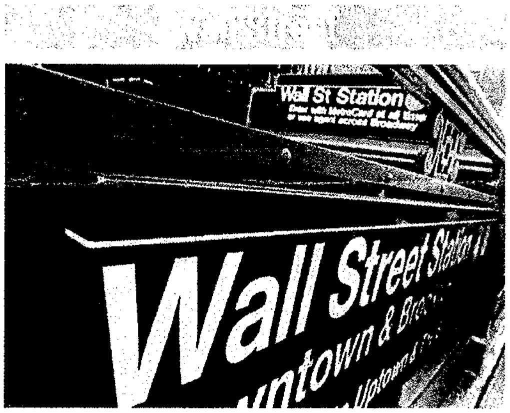
The Oktibbeha County 4-H Horse Show, at which 4-H members ages 8 to 18 will show off their speed, skill and style, will be at the MS Horse Park on Saturday.

The competition, which starts at 8:30 a.m., is free and open to the public, according to a news release from Dana Traywick, marketing and communications director for the horse park. The horse park is at 869 East Poor House Road, and the competition will be in the covered arena and indoor arena, ending in early afternoon.

Winners of Saturday's competitions in halter, Western, gaited, English and speed trials will come back to the horse park June 10 through 13 for the 4-H Northeast District Horse Show. That event, also free to the public, draws young competitors from 22 northeast Mississippi counties, Traywick said.

District winners will move on to the state show in Jackson, and first-place winners there can advance to 4-H Regionals, according to the news release.

The Oktibbeha County 4-H Horse Show will be the 648th event held at the horse park, for an average of 41 per year, Traywick said. The horse park is a division of Mississippi State University Extension Service. For more information go to www.mshorsepark.com.



This Oct. 2, 2014 file photo shows the Wall Street subway stop on Broadway, in New York's Financial District. The U.S. economy went into reverse in the first three months of this year as a severe winter and a widening trade deficit took a harsher toll than initially estimated. The overall economy as measured by the gross domestic product contracted at an annual rate of 0.7 percent in the January-March period, the Commerce Department reported on Friday. **(Photo by Richard Drew, AP)**

Stocks end week lower following disappointing economic data

NEW YORK (AP) — Stocks sank Friday following news that the U.S. economy shrank in the first three months of the year.

The revised data showed that gross domestic product contracted 0.7 percent in the first quarter. That was worse than the government's initial estimate of growth of 0.2 percent.

The Dow Jones industrial average lost 115.44 points, or 0.6 percent, to 18,010.68. The Standard & Poor's 500 index lost 13.40 points, or 0.6 percent, to 2,107.39 and the Nasdaq composite lost 27.95 points, or 0.6 percent, to 5,070.03.

All three indexes ended the week lower. It was the first weekly loss for the S&P 500 following three weeks of gains.

Investors had two other disappointing pieces of economic news to work through. A Chicago manufacturing survey fell to 46.2, well below the 53 that economists were anticipating, and a measure of consumer sentiment fell to a six-month low in May.

Along with the disappointing economic data, investors continued to watch developments out of Greece.

Greek Prime Minister Alexis Tsipras has said a deal with the country's creditors could be ready by the weekend, but it appears other key officials are less confident.

"With it being a Friday and the uncertainty around the Greece situation and the disappointing economic data, naturally investors are taking some of their positions off the table," said JJ Kinahan, a strategist at TDAmeritrade.

2014 Annual Drinking Water Quality Report
Rock Hill Community Water Association
PWS#: 0530017
May 2015

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Gordo Formation Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Rock Hill Community Water Association have received a lower susceptibility ranking to contamination.

If you have any questions about this report or concerning your water utility, please contact Donna Sims at 662.418.6485. We want our valued customers to be informed about their water utility. If you want to learn more, please attend the annual meeting scheduled for the [illegible] Monday of November at 7:30 PM at the Rockhill United Methodist Church.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2014. In cases where monitoring wasn't required in 2014, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level – the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) – The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) – The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) – one part per million corresponds to one minute in two years or a single penny in $10,000.

Parts per billion (ppb) or Micrograms per liter – one part per billion corresponds to one minute in 2,000 years, or a single penny in $10,000,000.

TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
[illegible] Arsenic	N	2014	6	No Range	ppb	n/a	10	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes
10. Barium	N	2014	.056	No Range	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2014	2.9	No Range	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2009/11*	.3	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
17. Lead	N	2009/11*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Disinfection By-Products								
Chlorine	N	2014	.9	.6 – 1.3	ppm	0	MRDL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2014.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Rock Hill Community Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
