APPROVED

**BUREAU OF PUBLIC WATER SUPPLY**

**CALENDAR YEAR 2008 CONSUMER CONFIDENCE REPORT  
CERTIFICATION FORM**

HARMONY RIDGE WATER ASSN.  
Public Water Supply Name

0150006  
List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each *community* public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

**Please Answer the Following Questions Regarding the Consumer Confidence Report**

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper
  - On water bills
  - Other \_\_\_\_\_

Date customers were informed: 6/3/09

CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:

Date Mailed/Distributed:  / /

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: The Meteor

Date Published: 6/3/09

CCR was posted in public places. *(Attach list of locations)*

Date Posted:  / /

CCR was posted on a publicly accessible internet site at the address: www. \_\_\_\_\_

**CERTIFICATION**

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

PROOF OF PUBLICATION

**The METEOR**, INC.

ESTABLISHED 1881  
Crystal Springs, Mississippi 39059  
State of Mississippi, Copiah County

Personally appeared before the undersigned NOTARY  
PUBLIC in and for said County and State, HENRY  
CARNEY, Publisher of The Crystal Springs Meteor, a newspaper  
published at Crystal Springs, Mississippi, who on oath says the  
notice a copy of which is hereto attached, was printed  
ONE consecutive times in said paper as follows:

	Cost
<u>JUNE 3 2006</u>	<u>\$ 155.25</u>
_____	\$ _____
_____	\$ _____
_____	\$ _____
_____	\$ _____
_____	\$ _____

Notary \$ 3.00  
Total Cost \$ 158.25

Henry Carney Publisher

Sworn to and subscribed before me this 3RD day of  
JUNE, 2006

Gale Gallman  
Notary Public

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our overall goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from two wells drawing from the Catskills formation Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to various potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided immediately below. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Harmony Ridge Water Association have received moderate to higher susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Cass C. Berry at 801-882-4788. We want you valued customers to be informed about their water utility. If you want to learn more, please attend the annual meeting scheduled annually for the second Tuesday in March at 7:00 PM at the Public Station Courthouse.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the water quality parameters that we detected during the period of January 1 to December 31, 2008. In cases where monitoring was not required in 2008, the table reflects the most recent results. As water travels over the surface of contaminants from the presence of various inorganic materials and can pick up substances from the atmosphere, such as pesticides and herbicides, which can be naturally occurring or from human activity, microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as lead and nitrate, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, and petroleum production, which may come from a variety of sources such as refineries, urban storm-water runoff, and other industrial processes and petroleum production, which may also come from gas stations and other organic solvents; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water supplied by public water systems. All drinking water included bottled drinking water may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

**Action Level** - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**Maximum Contaminant Level (MCL)** - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLG as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG)** - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**TEST RESULTS**

Contaminant	Violation TN	Date Collected	Level Detected	Range of Detects Exceeding MCL/MCLG	Unit Measure	MCLG	MCL	Likely Source of Contamination
<b>Inorganic Contaminants</b>								
10 Barium	N	2008	224	No Range	ppm	2	2	Discharge of drilling wastes, erosion of natural deposits, production of natural deposits
11 Boron	N	2008	13	No Range	ppm	4	4	Discharge from oil refineries and chemical processing, agriculture, and defense industries
14 Copper	N	2008	3	0	ppm	1.3	1.3	Corrosion of brass and other metal pipes, erosion of natural deposits, leaching from wood preservatives

16 Fluoride	N	2008	14	No Range	ppm	4	4	Erosion of natural deposits, water additive which promotes strong teeth, discharge from fertilizer and aluminum industries
17 Lead	N	2008	1	0	ppm	0	AL: 0.05	Corrosion of lead-based plumbing systems, erosion of natural deposits
18 Nitrate (as Nitrogen)	N	2008	10	No Range	ppm	10	10	Runoff from fertilizer use, leaching from septic tanks, sewage, erosion of natural deposits
21 Selenium	N	2008	9	No Range	ppb	50	50	Discharge from petroleum and metal refineries, erosion of natural deposits, discharge from mines

**Disinfection By-Products**

Contaminant	Y	2008	3.3	2.15 - 3.3	ppm	0 <th>MORL: 4 <th>Water additive used for control </th></th>	MORL: 4 <th>Water additive used for control </th>	Water additive used for control
*Not recent sample. No sample required for 2008.								

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected. However, the EPA has determined that your water is SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. Beginning January 1, 2004, the Massachusetts State Department of Health (MDH) required public water systems to monitor chlorine as a primary disinfectant to meet monitoring requirements in Act 465 required by the Stage 1 Disinfection By-Product Rule. Our water system failed to complete these monitoring requirements in April of 2004. We are currently reviewing the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to

### Disinfection By-Products

Chlorine	Y	2008	3.3	2.15 - 3.3	ppm	0	MCRRL = 4	Water additive used to control microbes
----------	---	------	-----	------------	-----	---	-----------	---

\* Most recent sample. No sample required for 2008.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected, however, the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. Beginning January 1, 2004, the Mississippi State Department of Health (MSDH) required public water systems that use chlorine as a primary disinfectant to monitor/test for chlorine residuals as required by the Stage 1 Disinfection By-Products Rule. Our water system failed to complete these monitoring requirements in April of 2004. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 601.576.7682 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

#### \*\*\*\*\*A MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING\*\*\*\*\*

In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007 - December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice.

Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. The Bureau of Public Water Supply is taking action to resolve this issue as quickly as possible. If you have any questions, please contact Melissa Parker, Deputy Director, Bureau of Public Water Supply, at 601.576.7516.

The Harmony Ridge Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
