BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2008 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

USUUOU 6
List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each *community* public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

2008 Annual Drinking Water Quality Report Noxapater Water Department PWS#: 0800006 May 2009

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day, Our constant goal is to provide you with a sade and dependable supply of drinking water. We want you to understand the efforts we make to condinually improve the water treatment process and preceded our water resources. We are committed to enturing the quality of your water, Our water source is from wells drawing from the Lover Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contemination. The general susceptibility rankings assigned to each wall of the ayalam are provided inmediately below. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public venter system and is available for viewing upon request. The waits for the Nosspaler Violer Department have neceled moderness susceptibility annihings to certain market.

If you have any questions about this report or concerning your water utility, please contact J.W. McBrayer at 052-724-4478. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tousday of the month at 750 PM at the Notespiete Town Hall.

We routinely movilor for consistents in your distriling value according to Federal and State leve. This table below list all of the driving writer containments that we detected during for the period of Jenuary 1° to December 31° 2008. In cases where mortifioning writer containments that we detected during for the period of Jenuary 1° to December 31° 2008. In cases where mortifioning water to require the 2009, his table relevant on the representation of the surface of tends of the surface of the surface of the surface of the surface of tends of the surface of the surf

In this table you will find many terms and abbreviations you might not be familiar with. To help you belter understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as fessible using the best available treatment technology.

Maximum Conteminant Lovel Goal (MCLG) - The "Goal" (MCLG) is the level of a conteminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Parts per million (ppm) or Milligrams per liter (mgd) - one part per million corresponds to one minute in two years or a single panny is \$10,000.

Parts per hillion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

| | | | | TEST RES | ULTS | | | |
|---|------------------|-------------------|-------------------|---|--------------------------|------|-------------------|--|
| Conteminant | Violation Y/N | Date Collected | Level Detected | Range of Detects or # of Samples Exceeding MCL/ACL | Unit Measurs -mant | MCLG | MCL | Likely Source of Contamination |
| Inorganic | Contan | inants | | | | | | |
| 10. Barium | N | 2006* | .033 | No Range | ppm | 2 | 5 | Discharge of drilling wastes; discharge from metal refinerie erosion of natural deposits |
| 14. Copper | N | 2008 | 1 | ٠ | ppm | 1.3 | AL=1.3 | Corrosion of household plumble systems; erosion of natural deposits; beaching from wood preservatives |
| 17. Lead | N | 2008 | Allive | | ppb | 0 | AL+15 | Compsion of household plumbs systems, erosion of natural deposits |
| Disinfection | a By-Pı | oducts | | | | | e e | |
| 82. TTritil [Total trihalomethanes] | N : | 2007* 1 | N | Range ppb | | 0 1 | BO By-pr shlor | roduct of drinking water instion. |
| Chiorina | N | 2008 1 | 2 | 05-1.2 pom | ppm 0 Mi | | -AIW | ster additive used to control |

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS ASF at these believes.

We are required to monitor your drinking water for specific constituents on a roombly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. Beginning January 1, 2004, the Misshaeppi State Department of Teath (MSDN) required public water systems that use childrines as privary districtant to monitorinest for childrine realization as previously stated by the Stage 1 Distrinction By-Products Rule. We did complete the monitoring requirements for bacteriological sampling that shawed no colling present, in an effort to ensure systems complete all monitoring requirements, MSDN now notifies systems of any missing sampless prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materies and components associated with service times and home plumbing. Our Water Association is reagonable to the providing high quality drinking water, but cannot control the variety of materiests used in prunting components. When you water has been sitting for several hours, you can minimize the potential for lead exposure by flushing over less for 30 exceeds to 25 minutes before using water for detecting or cooking. If you are concerned about lest in your water, you may wish to have your water tested. Information on lead in drinking water, setting methods, and steps you can take to minimize exposure is evaluable from the Stafe Diskings Water Hotiline or at high-planw aper powerselevationed. The diskination of lead to flexify the property of the prop

All sources of diriking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbise, incogenic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least mail amounts of come contaminants. The presence of contaminants does not nocessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Sallo Printing Water Hollers at 1-500-424-475.

Some people may be more vulnerable to contaminants in drinking water than the general population, immuno-comprenised persons such as presents with cancer undergoing chemotherapy, presents who have undergone organ beneglants, people with HRWAIDS or other immune system disorders, some allowly, and infrants can be particularly of risk from infractions. These people should exist advice about disting water from their health carse providers. EPA/DC quidelines on appropriate meets to lessen the risk of infection by cryptosperidium and other microbiological contaminants are available from the Salle Drinking Water Holland + 100-024-074.

****A MESSAGE FROM M8DH CONCERNING RADIOLOGICAL SAMPLING****

In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for redionuclides beginning. January 2007 - December 2007, Your public water supply completed sampling by the scheduled deadline, however, during an audior of the Missessippli State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) supplied analyses and reporting of radiological compliance samples and results until further notice.

Although this was not the result of inaction by the public vester supply, MSDH was required to hause a violation. The Burreau of Public Water Supply is taking solion to resolve this serve as qualchy as possible. If you have any questions, please contact fieldsee Parker, Depthy Director, Sumsus of Public Visters Supply, all 607.379.7318,

The Noxapater Water Department works around the clock to provide top quality water to every tap. We sek that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
