

RECEIVED-WATER SUPPLY
2010 JUN 28 PM 1:47

MISSISSIPPI STATE DEPARTMENT OF HEALTH

BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2009 CONSUMER CONFIDENCE REPORT
CERTIFICATION FORM

Walls Water Association, Inc.
Public Water Supply Name

0170019 + 0170043
List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each *community* public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

Please Answer the Following Questions Regarding the Consumer Confidence Report

- Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*
 - Advertisement in local paper
 - On water bills
 - Other _____

Date customers were informed: / /

- CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:

Date Mailed/Distributed: / /

- CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: DeSoto Times Tribune

Date Published: 6/15/10

- CCR was posted in public places. *(Attach list of locations)*

Date Posted: / /

- CCR was posted on a publicly accessible internet site at www._____

CERTIFICATION

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

Wade A. Carter (Manager)
Name/Title (President, Mayor, Owner, etc.)

Date

Mail Completed Form to: Bureau of Public Water Supply/P.O. Box 1700/Jackson, MS 39215
Phone: 601-576-7518

570 East Woodrow Wilson • Post Office Box 1700 • Jackson, MS 39215-1700

Equal Opportunity in Employment/Services

PROOF OF PUBLICATION

THE STATE OF MISSISSIPPI
 COUNTY OF DESOTO

Diane Smith personally appeared before me the undersigned in and for said County State and states on oath that she is the **CLERK** of the DeSoto Times-Tribune, a newspaper published in the town of Hernando, State and County aforesaid, and having a general circulation in said county, and that the publication of the notice, a copy of which is hereto attached has been made in said paper 1 consecutive times, as follows, to-wit:

Water Quality Report
 0170019 & 0170043 May 2010

This report is designed to inform you about the quality water you receive with a safe and dependable supply of drinking water. We describe the water treatment process and protect our water resources. We encourage you to be our best allies. Our water source is from wells drawing from the aquifer system to determine the overall susceptibility of its drinking water system to contamination. This report contains detailed information on how the susceptibility of the aquifer system is determined and is available for viewing upon request. The wells for the aquifer system are our best allies. Our water source is from wells drawing from the aquifer system to determine the overall susceptibility of its drinking water system to contamination.

If you have a concern, you can meet with the board, by request of the month at 4:00 PM at the Walls Water Office. The annual fee is \$15.00. For more information, please contact Wade Carter, Manager at 662.781.3722.

Federal and State laws. This table below lists all of the drinking water contaminants that are regulated under the SDWA. Contaminants that are not listed are not regulated under the SDWA. In cases where monitoring was not required, the MCLG is 0.1 mg/L. In cases where monitoring was required, the MCLG is 0.1 mg/L. The MCL is the maximum level of a contaminant that is allowed in drinking water. The MCLG is the highest level of a contaminant that is allowed in drinking water based on available treatment technology. The MCL is the maximum level of a contaminant in drinking water below which there is no known or expected health risk. The MCL is based on the amount of a disinfectant allowed in drinking water. There is convincing evidence that a disinfectant level of 1.0 mg/L in drinking water is necessary to control microbial contaminants. The MCL is based on the amount of a disinfectant allowed in drinking water. There is convincing evidence that a disinfectant level of 1.0 mg/L in drinking water is necessary to control microbial contaminants. The MCL is based on the amount of a disinfectant allowed in drinking water. There is convincing evidence that a disinfectant level of 1.0 mg/L in drinking water is necessary to control microbial contaminants.

Contaminant	MCLG	MCL	Likely Source of Contamination
Asbestos	0.1	0.1	Older buildings
Bacteria	0	0	Untreated surface water
Chlorine	0.1	0.1	Water treatment process
Chlorine Dioxide	0.1	0.1	Water treatment process
Lead	0.01	0.01	Lead pipes, solder, and fittings
Nitrate	10	10	Fertilizers, animal manure
Radon	3	3	Natural occurrence in groundwater
Turbidity	1	1	Soil erosion, construction activities
Volatile Organic Compounds (VOCs)	0.1	0.1	Gasoline, oil, and other petroleum products

NOTARY PUBLIC STATE OF MISSISSIPPI AT LARGE
 MY COMMISSION EXPIRES: JANUARY 16, 2013
 BONDED THRU DIXIE NOTARY SERVICE, INCORPORATED

4 x 16 @ 5.30

A. Single first insertion of _____ words @ .12 \$ 339.20

B. _____ subsequent insertions of _____ words @ .10 \$ _____

C. Making proof of publication and depositing to same \$ 3.00

TOTAL PUBLISHER'S FEE: \$ 342.20

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies. Our water source is from wells drawing from the Lower Wilcox and Sparta Sand Aquifers.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Walls Water Association have received a lower to moderate ranking in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Wade Carter, Manager at 662.781.3722. We want our valued customers to be informed about their water utility. If you have a concern, you can meet with the board, by request at our regularly scheduled meetings. They are held on the first Tuesday of the month at 4:00 PM at the Walls Water Office. The annual meeting will be held on the fourth Thursday of July at 7:00 PM at the Walls Public Library.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2009. In cases where monitoring wasn't required in 2009, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Picocuries per liter (pCi/L) - picocuries per liter is a measure of the radioactivity in water.

PWS ID # 0170019 TEST RESULTS									
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL/MRDL	Unit Measurement	MCLG	MCL	Likely Source of Contamination	
Microbiological Contaminants									
1. Total Coliform Bacteria	N	October	Positive	1	NA	0	0	presence of coliform bacteria in 5% of monthly samples	Naturally present in the environment
Inorganic Contaminants									
10. Barium	N	2008*	.009	.001 - .009	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits	
13. Chromium	N	2008*	1.2	1 - 1.2	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits	
14. Copper	N	2008*	.001	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives	
16. Fluoride**	N	2008*	.489	.103 - .489	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories	
17. Lead	N	2008*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems; erosion of natural deposits	
21. Selenium	N	2008*	.821	No Range	ppb	50	50	Discharge from petroleum and metal refineries; erosion of natural deposits; discharge from mines	
Disinfection By-Products									
Chlorine	N	2009	1	6 - 1	ppm	0	MRDL = 4	Water additive used to control microbes

TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL/MRDL	Unit Measure (ment)	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
10. Barium	N	2008*	.036	No Range	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
14. Copper	N	2007*	.8	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride**	N	2008*	.12	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2007*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems; erosion of natural deposits

Disinfection By-Products

22. TTHM (Total trihalomethanes)	N	2008*	7.88	No Range	ppb	0	60	By-product of drinking water chlorination.
Chlorine	N	2008	1.25	.82 - 1.25	ppm	0	MRDL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2009.

** Fluoride level is routinely adjusted to the MS State Dept of Health's recommended level of 0.7 - 1.3 mg/l.

Microbiological Contaminants

(1) Total Coliforms: Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, bacteria may be present. Coliforms were found in more samples than allowed and this was a warning of potential problems.

As you can see by the table, our system had no contaminant violations, however in October of 2009 on system # 0170019 one sample tested positive for total coliform. In cooperation with the Mississippi Department of Health, the necessary measures were taken to return the system to compliance. We are pleased to report that the re-samples were free of the bacteria.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 801.576.7682 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Walls Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
