MISSISSIPPI STATE DEPARTMENT OF HEALTH

BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2009 CONSUMER CONFIDENCE REPORT  
CERTIFICATION FORM

Naval Construction Battalion Center  
Public Water Supply Name

ID # 0240060  
List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each *community* public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

Please Answer the Following Questions Regarding the Consumer Confidence Report

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper
- On water bills
- Other posted in high traffic buildings on base, website

Date customers were informed:     /    /    

CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:

Date Mailed/Distributed:     /    /    

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: Seabee Courier

Date Published: 06/17/2010

CCR was posted in public places. *(Attach list of locations)*

Date Posted: 06/24/2010

CCR was posted on a publicly accessible internet site at the address: www.

https://www.cnio.navy.mil/Gulfport/Service\_Organizations/Environmental/index.htm

**CERTIFICATION**

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

CHRIS KNUDSEN / PUBLIC WORKS OFFICER  
Name/Title (President, Mayor, Owner, etc.)

24 JUN 10  
Date

Mail Completed Form to: Bureau of Public Water Supply/P.O. Box 1700/Jackson, MS 39215  
Phone: 601-576-7518

# 2009 NCBC Consumer Confidence Report

## **Is my water safe?**

CBC Gulfport has water quality sampling and laboratory analysis performed in accordance with Environmental Protection Agency (EPA) and the Mississippi State Department of Health (MSDH).

Last year, as in years past, your tap water met all EPA and state drinking water health standards. Local water vigilantly safeguards its water supplies and once again we are proud to report that our system has not violated a maximum contaminant level or any other water quality standard. Throughout the year continuous sampling is performed on the drinking water system and the analysis is completed by the state water laboratory. The state performs annual inspections of drinking water systems. No significant deficiencies were observed during the 2009 inspection. The base received a rating of 5.0, the highest rating.

## **Do I need to take special precautions?**

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

## **Where does my water come from?**

NCBC Gulfport receives raw water from the Graham Ferry aquifer. The Graham Ferry aquifer is part of the Miocene aquifer system that consists of multiple layers of sand separated by beds of clay. A U.S. Geological Survey study of groundwater in Harrison County found that aquifers deeper than 500 feet were artesian. The groundwater for the NCBC Gulfport water supply is pumped from three wells. Each well is in excess of 700 feet.

## **Source water assessment and its availability**

Our source water assessment was prepared by the MSHD and is available for review. If you would like to review this report, please call the Environmental Division or visit our webpage: [https://www.cnic.navy.mil/Gulfport/Service\\_Organizations/Environmental/index.htm](https://www.cnic.navy.mil/Gulfport/Service_Organizations/Environmental/index.htm)

### **Why are there contaminants in my drinking water?**

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA Safe Drinking Water Hotline (800-426-4791).

### **How can I get involved?**

The best mechanism to get involved consists of participating in Housing Residence meetings. The most current information about the meetings may be obtained by contacting the Housing Office at 228-871-2586.

The consumer confidence report will not be mailed to NCBC customers, but is posted on the NCBC Environmental webpage. The Environmental Division encourages all customers that have concerns or questions to contact us directly, 228-871-2485 or visit our website.

### **Conservation Tips**

Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference – try one today and soon it will become second nature.

- Take short showers - a 5 minute shower uses 4 to 5 gallons of water compared to up to 50 gallons for a bath.
- Shut off water while brushing your teeth, washing your hair and shaving and save up to 500 gallons a month.
- Use a water-efficient showerhead. They're inexpensive, easy to install, and can save you up to 750 gallons a month.
- Run your clothes washer and dishwasher only when they are full. You can save up to 1,000 gallons a month.
- Water plants only when necessary.
- Fix leaky toilets and faucets. Faucet washers are inexpensive and take only a few minutes to replace. To check your toilet for a leak, place a few drops of food coloring in the tank and wait. If it seeps into the toilet bowl without flushing, you have a leak. Fixing it or replacing it with a new, more efficient model can save up to 1,000 gallons a month.
- Adjust sprinklers so only your lawn is watered. Apply water only as fast as the soil can absorb it and during the cooler parts of the day to reduce evaporation.
- Teach your kids about water conservation to ensure a future generation that uses water wisely. Make it a family effort to reduce next month's water bill!
- Visit [www.epa.gov/watersense](http://www.epa.gov/watersense) for more information.

## Source Water Protection Tips

Protection of drinking water is everyone's responsibility. You can help protect your community's drinking water source in several ways:

- Eliminate excess use of lawn and garden fertilizers and pesticides – they contain hazardous chemicals that can reach your drinking water source.
- Pick up after your pets.
- If you have your own septic system, properly maintain your system to reduce leaching to water sources or consider connecting to a public water system.
- Dispose of chemicals properly; take used motor oil to a recycling center.
- Volunteer in your community. Find a watershed or wellhead protection organization in your community and volunteer to help. If there are no active groups, consider starting one. Use EPA's Adopt Your Watershed to locate groups in your community, or visit the Watershed Information Network's How to Start a Watershed Team.
- Organize a storm drain stenciling project with your local government or water supplier. Stencil a message next to the street drain reminding people "Dump No Waste - Drains to River" or "Protect Your Water." Produce and distribute a flyer for households to remind residents that storm drains dump directly into your local water body.

## Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. NCBC Gulfport is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. Lead in the drinking water has not posed a problem in the past.

---

## Water Quality Data Table

The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently.

<u>Contaminants</u>	<u>MCLG or MRDLG</u>	<u>MCL, TT, or MRDL</u>	<u>Your Water</u>	<u>Range</u>		<u>Sample Date</u>	<u>Violation</u>	<u>Typical Source</u>
				<u>Low</u>	<u>High</u>			
<b>Disinfectants &amp; Disinfectant By-Products</b>								
(There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants)								

Chlorine (as Cl <sub>2</sub> ) (ppm)	4	4	0.72	0.58	0.94	2009	No	Water additive used to control microbes
<b>Inorganic Contaminants</b>								
Nitrate [measured as Nitrogen] (ppm)	10	10	0.2	0.2	0.2	2009	No	Runoff from fertilizer use; Erosion of natural deposits
Nitrite [measured as Nitrogen] (ppm)	1	1	0.05	0.05	0.05	2009	No	Erosion of natural deposits
<b>Volatile Organic Contaminants</b>								
1,2,4-Trichlorobenzene (ppb)	70	70	0.5	NA		2009	No	Discharge from textile-finishing factories
cis-1,2-Dichloroethylene (ppb)	70	70	0.5	NA		2009	No	Discharge from industrial chemical factories
Xylenes (ppm)	10	10	0.0005	0.0005	0.0005	2009	No	Discharge from petroleum factories; Discharge from chemical factories
Dichloromethane (ppb)	0	5	0.5	NA		2009	No	Discharge from pharmaceutical and chemical factories
o-Dichlorobenzene (ppb)	600	600	0.5	NA		2009	No	Discharge from industrial chemical factories
p-Dichlorobenzene (ppb)	75	75	0.5	NA		2009	No	Discharge from industrial chemical factories
1,1-Dichloroethylene (ppb)	7	7	0.5	NA		2009	No	Discharge from industrial chemical factories
trans-1,2-Dichloroethylene (ppb)	100	100	0.5	NA		2009	No	Discharge from industrial chemical factories
1,2-Dichloroethane (ppb)	0	5	0.5	NA		2009	No	Discharge from industrial chemical factories
1,1,1-Trichloroethane (ppb)	200	200	0.5	NA		2009	No	Discharge from metal degreasing sites and other factories
1,2-Dichloropropane (ppb)	0	5	0.5	NA		2009	No	Discharge from industrial chemical factories
Trichloroethylene (ppb)	0	5	0.5	NA		2009	No	Discharge from metal degreasing sites and other factories
1,1,2-Trichloroethane (ppb)	3	5	0.5	NA		2009	No	Discharge from industrial chemical factories
Tetrachloroethylene (ppb)	0	5	0.5	NA		2009	No	Discharge from factories and dry cleaners
Toluene (ppm)	1	1	0.0005	NA		2009	No	Discharge from petroleum factories
Ethylbenzene (ppb)	700	700	0.5	NA		2009	No	Discharge from petroleum refineries
Styrene (ppb)	100	100	0.5	NA		2009	No	Discharge from rubber and plastic factories; Leaching from landfills

Vinyl Chloride (ppb)	0	2	0.5	0.5	0.5	2009	No	Leaching from PVC piping; Discharge from plastics factories
Carbon Tetrachloride (ppb)	0	5	0.5	NA		2009	No	Discharge from chemical plants and other industrial activities
Benzene (ppb)	0	5	0.5	NA		2009	No	Discharge from factories; Leaching from gas storage tanks and landfills
<b><u>Contaminants</u></b>	<b><u>MCLG</u></b>	<b><u>AL</u></b>	<b><u>Your Water</u></b>	<b><u>Sample Date</u></b>	<b><u># Samples Exceeding AL</u></b>	<b><u>Exceeds AL</u></b>	<b><u>Typical Source</u></b>	
<b>Inorganic Contaminants</b>								
Copper - action level at consumer taps (ppm)	1.3	1.3	0.2	2009	0	No	Corrosion of household plumbing systems; Erosion of natural deposits	
Lead - action level at consumer taps (ppb)	0	15	5	2009	0	No	Corrosion of household plumbing systems; Erosion of natural deposits	

#### Unit Descriptions

Term	Definition
ppm	ppm: parts per million, or milligrams per liter (mg/L)
ppb	ppb: parts per billion, or micrograms per liter (µg/L)
NA	NA: not applicable
ND	ND: Not detected
NR	NR: Monitoring not required, but recommended.

#### Important Drinking Water Definitions

Term	Definition
MCLG	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
MCL	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.
MRDLG	MRDLG: Maximum residual disinfectant level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

MNR	MNR: Monitored Not Regulated
MPL	MPL: State Assigned Maximum Permissible Level

# 2009 NCBC Consumer Confidence Report

**Is my water safe?**  
 CBC Gulfport has water quality sampling and laboratory analysis performed in accordance with Environmental Protection Agency (EPA) and the Mississippi State Department of Health (MSDH). Last year, as in years past, your tap water met all EPA and state drinking water health standards. Local water vigilantly safeguards its water supplies and once again we are proud to report that our system has not violated a maximum contaminant level or any other water quality standard. Throughout the year continuous sampling is performed on the drinking water system and the analysis is completed by the state water laboratory. The state performs annual inspections of drinking water systems. No significant deficiencies were observed during the 2009 inspection. The base received a rating of 5.0, the highest rating. Do I need to take special precautions? Some people may be more vulnerable to contaminants in drinking water than the general population: Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections.

These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791). Where does my water come from? NCBC Gulfport receives raw water from the Graham Ferry aquifer. The Graham Ferry aquifer system that consists of multiple layers of sand separated by beds of clay. A U.S. Geological Survey study of groundwater in Harrison County found that aquifers deeper than 500 feet were artesian. The groundwater for the NCBC Gulfport water supply is pumped from three wells. Each well is in excess of 700 feet. Source water assessment and its availability Our source water assessment was prepared by the MSDH and is available for review. If you would like to review this report, please call the Environmental Division or visit our webpage: [https://www.cbc.navy.mil/Gulfport/Service\\_Organizations/Environmental/index.htm](https://www.cbc.navy.mil/Gulfport/Service_Organizations/Environmental/index.htm) Why are there contaminants in my drinking water? Drinking water, including bottled water, may reasonably be

expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA Safe Drinking Water Hotline (800-426-4791). How can I get involved? The best mechanism to get involved consists of participating in Housing Residence meetings. The most current information about the meetings may be obtained by contacting the Housing Office at 228-871-2586. The consumer confidence report will not be mailed to NCBC customers, but is posted on the NCBC Environmental webpage. The Environmental Division encourages all customers that have concerns or questions to contact us directly, 228-871-2485 or visit our website. Conservation Tips Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference - try one today and soon it will become second nature. Take short showers - a 5 minute shower uses 4 to 5 gallons of water. See WATER page 25

Table with columns: MCLG, MCL, MTR, MFL. Definitions for Maximum Contaminant Level Goal, Maximum Contaminant Level, Maximum Residual Disinfectant Level, and Maximum Residual Disinfectant Level.

- Source Water Protection Tips**  
 Protection of drinking water is everyone's responsibility. You can help protect your community's drinking water source in several ways:
  - Eliminate excess use of lawn and garden fertilizers and pesticides - they contain hazardous chemicals that can reach your drinking water source.
  - Pick up after your pets.
  - If you have your own septic system, properly maintain your system to reduce leaching to water sources or consider connecting to a public water system.
  - Dispose of chemicals properly, take used motor oil to a recycling center.
  - Volunteer in your community. Find a watershed or wellhead protection organization in your community and volunteer to help. If there are no active groups, consider starting one.

- Visit the Watershed Information Network's How to Start a Watershed Team.
- Organize a storm drain stenciling project with your local government or water supplier. Stencil a message next to the street drain reminding people "Dump No Waste - Drains to River" or "Protect Your Water". Produce and distribute a flyer for households to remind residents that storm drains dump directly into your local water body.
- Additional Information for Lead**  
 If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. NCBC Gulfport is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking.

your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe

Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. Lead in the drinking water has not posed a problem in the past.

**Bringing them all home**  
BILOXI, Miss. - A horse-drawn caisson with 19th Century style coffins draped in period flags carries the remains of

unknown U.S. Soldiers from the Mexican-American War. Four soldiers whose remains were discovered on Greenwood Island in Pascagoula, Miss. were given full military honors during the Biloxi National Cemetery Memorial Day Ceremony May 31, 2010. More than 160 years ago, Greenwood Island was the site of Camp Jefferson Davis at the end of the Mexican-American War. According to data collected by the Jackson County Historical and Genealogical Society, Greenwood Island was occupied by 1,800 troops in June 1848. A total of 90 soldiers died at Greenwood Island during the six-month period of June 1848 through November 1849. To date, JCHGS has successfully identified the names of 44 of the 90 soldiers. Since April 2008, members of the Department of Anthropology and Sociology at Southern Mississippi University made numerous visits to recover the soldiers' remains from Greenwood Island.

## NewsRoom

### Today at NCBC

**Gulfport Official takes 'Voyage' with CDC**  
Dr. John Kelly, chief administrative officer for the city of Gulfport, visited the Child Development Center on board NCBC, June 23, to read to four and five-year-olds as part of the "Voyage to Book Island" reading program. The Department of Defense-wide program is designed to keep children engaged in reading throughout the summer months. Today at NCBC Archives

### Pine Bayou Farewell Tournament

There will be a Pine Bayou Farewell golf tournament June 25 beginning at noon and it is FREE to enter. Format will be a 4-Man Scramble. Team sign ups have ended; however several individual slots remain open. This will be the last golf tournament prior to the beginning of the course's transition into Seabee Park June 30. For more info contact 228-871-2494.

## Command Info

### Disaster Preparedness

Hurricane season

**Do you know what you and your family will do if a hurricane is headed toward the Gulf Coast? -- Visit Emergency Management to help you answer the question. Do you know how to get info about current tropical cyclone conditions and base actions? -- There are several avenues to get accurate info quickly including the Base Website, Facebook (sign up for SMS alerts), Twitter, Base Marquess, ATHoc (CAC holders only), and 228-871-4777.**

### Skipper's Log

**June 17  
Greatest Strengths**  
By Capt. Ed Brown  
CO, CBC/CMR 20TH SRG

Hopefully you all know what your greatest strengths are. Some people are athletic, some are smart and some are great negotiators. Every one of you has a special talent. I have watched the most junior
