BUREAU OF PUBLIC WATER SUPPLY 10 JUL -2 AM 9: 08

CALENDAR YEAR 2009 CONSUMER CONFIDENCE REPORT CERTIFICATION REPORT

BLUE LAKE WATER ASSOCIATION PWS ID # ('s):0420041

The Federal Safe Drinking Water Act requires each *community* public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

Please	Answer the	Following Ques	tions Regarding the	Consumer Con	nfidence Report				
	Customers were informed of availability of CCR by: (Attach copy of publication, water bill, or other)								
	0	Advertisement in On water bills Other	n local paper		_				
	Date customer	s were informed:							
	CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:								
	Date	mailed/distributed:	10-29-10-	Hand Del.	very				
	Name	of Newspaper:	paper. (Attach copy of pa		proof of publication)			
	CCR was poste	ed in public places.	(Attach list of locations, 9-10 200 Li) inophrey StI	HA Benc C	ty Half			
	CCR was poste	ed on a publicly acc	essible internet site at th	e address: www:_					
CERT	IFICATION:								
form and the wate of Publi	d manner identiter quality monitory. Water Supply.	fied above. I further oring data provided	to the public water syste	ion included in this m officials by the N	CCR is true and cor	rect and is consistent with artment of Health, Bureau			
			CR) was completed by certified only to be as			nformation provided by ovided.

Annual Drinking Water Quality Report Blue Lake Water Association PWS ID # 0420041 June, 2010

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water is purchased from the City of Itta Bena.

A source water assessment has been completed for the water supply to determine the overall susceptibility of its drinking water to identify potential sources of contamination. A report containing detailed information has been received by our office and will be made available for review upon request.

We're pleased to report that our drinking water meets all federal and state requirements.

If you have any questions about this report or concerning your water utility, please contact Ollie Seals at 662-254-7943. We want our valued customers to be informed about their water utility. If you want to learn more, please contact Ollie Seals at the above number or 662-254-7231 for meeting date and time.

Blue Lake Water Association routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1st to December 31st, 2009. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

TEST RESULTS											
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination			
Inorganic C	Contami	nants									
10. Barium	N		0.013	No Range	Ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits			
13. Chromium	N		1.6	No Range	Ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits			
14. Copper	N	2008*	0.1	None	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives			
16. Fluoride	N		0.22	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories			
17. Lead	N	2008*	1	None	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits			
19. Nitrate (as Nitrogen)	N		0.26	No Range	ppm	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits			
Disinfectar	ıts & Di	sinfectio	n By-Pr	oducts							
Chlorine (as Cl2)	N		0.51 to 0.64	None	ppm	4	4	Water additive used to control microbes			

^{*}Most recent sample results available

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Blue Lake Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Please call our office if you have questions.
