MISSISSIPPI STATE DEPARTMENT OF HEALTH

BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2009 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

TOWN OF INVERNESS

Public Water Supply Name

#0670007

List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each community public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

Please Answer the Following Questions Regarding the Consumer Confidence Report

- Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)
[X] Advertisement in local paper
[] On water bills
[] Other

Date customers were informed: / /

- CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:

Date Mailed/Distributed: / /

- CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)

Name of Newspaper: ENTERPRISE-TOCSIN

Date Published: 06 / 10 / 2010

- CCR was posted in public places. (Attach list of locations)

Date Posted: / /

- CCR was posted on a publicly accessible internet site at www.

CERTIFICATION

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

David Smith Mayor
Name/Title (President, Mayor, Owner, etc.)

2009 Annual Drinking Water Quality Report
Town of Inverness
PWS#: 0670007
June 2010

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from two wells drawing from the Sparta Sand Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided immediately below. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Town of Inverness have received lower to moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact David Smith at 662.265.5741. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of each month at 5:30 PM at the Town Hall.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2009. In cases where monitoring wasn't required in 2009, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								

10. Barium	N	2006*	.001	.0008 - .001	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
12. Cadmium	N	2006*	.159	.119 - .159	ppb	5	5	Corrosion of galvanized pipes; erosion of natural deposits; discharge from metal refineries; runoff from waste batteries and paints
13. Chromium	N	2006*	1	.9 - 1	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2008*	.1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride**	N	2006*	.229	.135 - .229	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2008*	7	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits

Disinfection By-Products

81. HAA5	N	2005*	16	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2005*	16	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2009	1.51	.49 - 1.51	ppm	0	MDRL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2009.

** Fluoride level is routinely adjusted to the MS State Dept of Health's recommended level of 0.7 - 1.3 mg/l.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected, however, the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The Town of Inverness works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

AFFIDAVIT OF PUBLICATION

STATE OF MISSISSIPPI
COUNTY OF SUNFLOWER
CITY OF INDIANOLA:

The Enterprise-Tocsin

Personally appeared before me, a Notary Public, in and for said County and State,

Quadrine McDonald of The Enterprise-Tocsin, a newspaper published in said City, County and State, who upon being duly sworn, deposes and says: The notice, of which a copy is hereunto annexed,

was published in said newspaper 1 weeks, as follows:

10 Day of June, 2010 Vol. CXXXI, No. 23
____ Day of _____, 20____ Vol. _____, No. _____
____ Day of _____, 20____ Vol. _____, No. _____
____ Day of _____, 20____ Vol. _____, No. _____
____ Day of _____, 20____ Vol. _____, No. _____

Signed Quadrine McDonald

And I further certify that I have examined the several copies of The Enterprise-Tocsin, above referred to, and find that the said notice has been published as stated.

Subscribed and sworn to before me this 10 day of June, 2010

Cost: \$ 305.62

2009 Annual Drinking Water Quality Report
Town of Inverness
FWOR 0070007
June 2010

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality of your water and the actions we've taken to provide you with a safe and dependable supply of drinking water. We've also included information on how you can help us improve the water treatment process and protect our water resources. We've also included information on how you can help us improve the water treatment process and protect our water resources.

If you have any questions about the report or concerning your water quality, please contact David Smith at 662.255.8741. We want our customers to be informed about their water quality. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of each month at 5:30 PM at the Town Hall.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. The table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2009. In cases where monitoring wasn't required in 2009, the table reflects the most recent results. As water flows through the various stages of treatment, it naturally picks up minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of natural or synthetic materials, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural fertilizers, animal waste, industrial or domestic wastewater discharges, oil and gas production, mining, and other sources. Some of these contaminants are naturally occurring and some are the result of human activity. Some of these contaminants can be harmful to human health.

In the table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

- Action Level** - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
- Maximum Contaminant Level (MCL)** - The "Maximum Allowable" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- Maximum Contaminant Level Goal (MCLG)** - The "Ideal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- Maximum Residual Disinfectant Level (MRDL)** - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- Maximum Residual Disinfectant Level Goal (MRDLG)** - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants in control microbial contaminants.

Parts per million (ppm) or milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.00.

Pounds per million (ppm) or milligrams per liter (mg/l) - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Contaminant	Volume Treated	Date Collected	Level Detected	Range of Detects or if Above MCLG	Unit Measured	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
TB Barium	N	2009	501	2009-2001	ppm	5	5	Discharge of drilling wastes, discharge from metal refineries.
12 Cadmium	M	2009	150	119 - 150	ppb	5	5	Leachate from metal refineries, discharge from metal refineries, acid mine drainage, and other sources.
14 Chromium	N	2009	1	0 - 1	ppb	100	100	Discharge from steel and other metal refineries, discharge from steel and other metal refineries.
14 Copper	N	2009	4	0 - 4	ppm	1.5	1.5	Discharge from metal refineries, discharge from metal refineries.
16 Fluoride	N	2009	229	130 - 229	ppm	4	4	Discharge from metal refineries, discharge from metal refineries, discharge from metal refineries.
17 Lead	N	2009	0	0	ppb	0	0	Discharge from metal refineries, discharge from metal refineries.
Disinfection By-Products								
H1THAA	N	2009	15	No Range	ppb	0	80	By-product of drinking water disinfection.
H1THAL	N	2009	18	No Range	ppb	0	80	By-product of drinking water disinfection.
H1THAM	N	2009	1.41	0.8 - 1.41	ppm	0	MCLG: 4	By-product of drinking water disinfection.

Lead and copper (ppb) or milligrams per liter (mg/l) - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Chloride level is routinely adjusted to the MS State Dept of Health's recommended level of 0.1 - 1.0 mg/l.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected, however, EPA has determined that your water is SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are available to you on our website or by contacting our office. If you are concerned about the quality of your water, please contact us at 662.255.8741.

Some people may be more vulnerable to contaminants in drinking water than the general population. Infants and young children, pregnant women, and the elderly are particularly vulnerable to contaminants in drinking water. These people should consult with their health care providers about drinking water and health risks. EPA/CDC guidelines on appropriate means to lessen the risk of illness about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of illness about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of illness about drinking water from their health care providers.

The Town of Inverness works around the clock to provide the quality water to every tap. We ask that all our customers help us by conserving water, which is the heart of our community, the way of life and our children's future.
