MISSISSIPPI STATE DEPARTMENT OF HEALTH

BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2009 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

Cypress Creek Water Assn Inc
Public Water Supply Name

810003 #1 810035 #2
List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each community public water system to develop and distribute a consumer confidence report (CCR) to its customers each year.

Please Answer the Following Questions Regarding the Consumer Confidence Report

- Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)
Advertisement in local paper
On water bills
Other

Date customers were informed: 5/27/10

- CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:

Date Mailed/Distributed: / /

- CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)

Name of Newspaper: The Coffeeville Courier

Date Published: 5/27/10

- CCR was posted in public places. (Attach list of locations)

Date Posted: / /

- CCR was posted on a publicly accessible internet site at www.:

CERTIFICATION

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above.

John W. Puidy - Pres.
Name/Title (President, Mayor, Owner, etc.)

2009 Annual Drinking Water Quality Report
 Cypress Creek Water Association, Inc.
 PWS# 0810003 & 0810035
 May 2010

RECEIVED - WATER SUPPLY
 2010 MAY 32 AM 8:59

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Meridian-Upper Wilcox Aquifer and also purchases water from the Town of Coffeeville that has wells drawing from the Lower Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided immediately below. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Cypress Creek Water Association and the Town of Coffeeville have received moderate to higher susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact John W. Purdy at 862-675-2681. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the third Tuesday of February, May, August and November at 7:00 PM at the office located at 1682 CR 211, Coffeeville, MS.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during for the period of January 1st to December 31st, 2009. In cases where monitoring wasn't required in 2009, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity, microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife, inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions.

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

| PWS ID#: 0810003 | | TEST RESULTS | | | | | | |
|-------------------------------|---------------|----------------|----------------|---|------------------|------|-------|--|
| Contaminant | Violation Y/N | Date Collected | Level Detected | Range of Detects or # of Samples Exceeding MCL/AL | Unit Measurement | MCLG | MCL | Likely Source of Contamination |
| Inorganic Contaminants | | | | | | | | |
| 10 Barium | N | 2009 | .009 | No Range | ppm | | 2 | Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits |
| 14 Copper | N | 2009 | .1 | 0 | ppm | | 1.3 | Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives |
| 17 Lead | N | 2009 | 2 | 0 | ppb | | AL=15 | Corrosion of household plumbing systems; erosion of natural deposits |

| | | | | | | | | |
|-------------------------|---|------|----|----------|-----|----|----|---|
| 19. Nitrate as Nitrogen | N | 2009 | 44 | No Range | ppm | 10 | 10 | Runoff from fertilizer use, leaching from septic tanks, sewage, erosion of natural deposits |
|-------------------------|---|------|----|----------|-----|----|----|---|

Disinfection By-Products

| | | | | | | | | |
|----------|---|------|-----|---------|-----|---|----------|---|
| Chlorine | N | 2009 | 1.3 | 0 - 1.3 | ppm | 0 | MDRL = 4 | Water additive used to control microbes |
|----------|---|------|-----|---------|-----|---|----------|---|

* Most recent sample. No sample required for 2009.

PWS ID#: 0810035

TEST RESULTS

| Contaminant | Violation Y/N | Date Collected | Level Detected | Range of Detects or # of Samples Exceeding MCL/ACL | Unit Measurement | MCLG | MCL | Likely Source of Contamination |
|-------------|---------------|----------------|----------------|--|------------------|------|-----|--------------------------------|
|-------------|---------------|----------------|----------------|--|------------------|------|-----|--------------------------------|

Inorganic Contaminants

| | | | | | | | | |
|----------------|---|-------|-----|-----------|-----|-----|--------|---|
| 10. Barium | N | 2006* | 009 | 004 - 009 | ppm | 2 | 2 | Discharge of drilling wastes, discharge from metal refineries, erosion of natural deposits |
| 13. Chromium | N | 2006* | 2 | 1 - 2 | ppb | 100 | 100 | Discharge from steel and pulp mills, erosion of natural deposits |
| 14. Copper | N | 2008* | 2 | 0 | ppm | 1.3 | AL=1.3 | Corrosion of household plumbing systems, erosion of natural deposits, leaching from wood preservatives |
| 16. Fluoride** | N | 2006* | 140 | 127 - 140 | ppm | 4 | 4 | Erosion of natural deposits, water additive which promotes strong teeth, discharge from fertilizer and aluminum factories |
| 17. Lead | N | 2008* | 1 | 0 | ppb | 0 | AL=15 | Corrosion of household plumbing systems, erosion of natural deposits |
| 21. Selenium | N | 2006* | 5 | No Range | ppb | 50 | 50 | Discharge from petroleum and metal refineries, erosion of natural deposits, discharge from mines |

Disinfection By-Products

| | | | | | | | | |
|---------------------------------|---|------|-------|----------|-----|---|----------|---|
| 82. THM (Total trihalomethanes) | N | 2009 | 11.09 | No Range | ppb | 0 | 80 | By-product of drinking water chlorination |
| Chlorine | N | 2009 | 1.4 | 1 - 1.4 | ppm | 0 | MRDL = 4 | Water additive used to control microbes |

* Most recent sample. No sample required for 2009.

As you can see by the table, our system had no contaminant violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 601.578.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population: Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk.
