## MISSISSIPPI STATE DEPARTMENT OF HEALTH

## BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2009 CONSUMER CONFIDENCE REPORT  
CERTIFICATION FORM

CENTRAL YAZOO WATER Association Inc  
Public Water Supply Name

820004, 820029, 820030, 820031, 820033  
List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each *community* public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

**Please Answer the Following Questions Regarding the Consumer Confidence Report**

Customers were informed of availability of CCR by: (*Attach copy of publication, water bill or other*)

- Advertisement in local paper  
 On water bills  
 Other \_\_\_\_\_

Date customers were informed: 5/26/10

CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:

Date Mailed/Distributed: \_\_\_ / \_\_\_ / \_\_\_

CCR was published in local newspaper. (*Attach copy of published CCR or proof of publication*)

Name of Newspaper: THE YAZOO HERALD

Date Published: \_\_\_ / \_\_\_ / \_\_\_

CCR was posted in public places. (*Attach list of locations*)

Date Posted: \_\_\_ / \_\_\_ / \_\_\_

CCR was posted on a publicly accessible internet site at www. \_\_\_\_\_

**CERTIFICATION**

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

Polly Carter / office Manager

2009 Annual Drinking Water Quality Report  
Central Yazoo Water Association, Inc.  
PWS#: 0820004, 0820029, 0820030, 0820031 & 0820033  
May 2010

2010 JUN -2 AM 7: 25

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Sparta Sand and the Meridian Upper Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided immediately below. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Central Yazoo Water Association, Inc. have received lower to moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Michael Laborde at 662-746-7531. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Monday of each month at 5:00 PM at the main office located at 37 Witherspoon Rd.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during for the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2009. In cases where monitoring wasn't required in 2009, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

*Action Level* - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

*Maximum Contaminant Level (MCL)* - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

*Maximum Contaminant Level Goal (MCLG)* - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

*Maximum Residual Disinfectant Level (MRDL)* - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

*Maximum Residual Disinfectant Level Goal (MRDLG)* - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

*Parts per million (ppm) or Milligrams per liter (mg/l)* - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

As you can see by the table, our system had no contaminate violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC

guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The Central Yazoo Water Association, Inc. works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

2009 Annual Drinking Water Quality Report  
 Central Yazoo Water Association, Inc.  
 PWS# 0820004, 0820029, 0820030, 0820031 & 0820033  
 May 2010

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality of the water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells tapping from the Sparta Sand and the Madison Upper Wilcox Aquifer.

The water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided immediately below. A report detailing detailed information on how the susceptibility rankings were determined has been prepared about public water system and is available for viewing upon request. The results for the Central Yazoo Water Association, Inc. have received lower to moderate susceptibility rankings to wells in the region.

If you have any questions about this report or concerning your water utility, please contact Michael Laborde at 662-748-7631. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our public water system meetings. These are held on the second Monday of each month at 5:00 PM at the main office located at 37 Wilkerson Rd.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detect during the period of January 1<sup>st</sup> to December 31<sup>st</sup> 2009. In cases where monitoring wasn't required in 2009, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials, such as viruses and bacteria, that may come from surface treatment plants, septic systems, agricultural operations, and wildlife. Other contaminants, such as pesticides, herbicides, and gas production, mining, or farming, pesticides and other pollutants, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential use; household products, including synthetic and natural organic chemicals, which are by-products of industrial processes and various consumer products, may also come from the surface and subsurface. In order to ensure that you are getting the best quality of water possible, we use a variety of treatment processes to remove contaminants in water provided by public water systems. All drinking water facilities should drinking water, especially those responsible for ensuring that the water does not necessarily contain any of the contaminants listed in this table.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

**Action Level** - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**Maximum Contaminant Level (MCL)** - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as possible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG)** - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL)** - The highest level of a disinfectant allowed in drinking water. There is strong evidence that addition of a disinfectant is necessary for control microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG)** - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Parts per million (ppm) or Milligrams per liter (mg/l)** - one part per million corresponds to one minute in two years, or a single penny in \$10,000.

**Parts per billion (ppb) or Micrograms per liter** - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS									
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Levels or % of Samples Exceeding MCL/MCLG	Unit Measurement	MCLG	MCL	MRDL	Likely Source of Contamination
<b>Inorganic Contaminants</b>									
10. Selenium	N	2009	0.07	No Range	Ppm		2	2	Discharge of drilling wastes, discharge from metal refineries, erosion of natural deposits
13. Chloride	N	2009	1	No Range	ppb	100	100		Discharge from steel and pulp mills, erosion of natural deposits
14. Copper	N	2009/08	0	0	ppm	1.3	AL=1.3		Corrosion of household plumbing systems, erosion of natural deposits, leaching from wood preservatives
Lead	N	2009/08	2	0	ppb	0	AL=15		Corrosion of household plumbing systems, erosion of natural deposits
<b>Disinfection By-Products</b>									
21. THM4	N	2009	0	No Range	ppb	0	0	60	By-product of drinking water disinfection
22. THM5	N	2009	14	No Range	ppb	0	0	60	By-product of drinking water disinfection
23. Total Trihalomethanes	N	2009	1.8	1.07 - 1.8	ppm	0	MRDL = 4		Water additive used to control microorganisms

As you can see by the table, our system had no contaminant violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected, however the EPA has determined that your water is safe at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We do complete the monitoring requirements for hazardous contaminants that should not occur in our water. In an effort to ensure system compliance, we monitor for hazardous contaminants. We do not monitor for all hazardous contaminants. If any hazardous contaminants are detected in your water, we will immediately notify you by mail and by phone. You may also receive a notice of violation if you are a lead service line customer. If you are a lead service line customer, you may want to have your service line tested. A list of approved testing laboratories is available from the Safe Drinking Water Act. If you are not a lead service line customer, you may want to have your service line tested. A list of approved testing laboratories is available from the Missouri State Department of Health Public Health Laboratory. Please contact 601-570-7502 if you wish to have your water tested.

All drinking water is subject to potential contamination by substances that are naturally occurring in our water. These substances include inorganic or organic chemicals and radioactive substances. All drinking water contains these substances in trace amounts. However, some natural substances, such as radon, are known to be carcinogenic. More information about these substances and their potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-453-3030.

Some people may be more vulnerable to contaminants in drinking water than the general population. Infants and young children, pregnant women, and the elderly are particularly vulnerable. Some people with compromised immune systems, such as those with kidney disease, may also be particularly vulnerable to contaminants in drinking water. Some infants and young children who are fed bottled water may be particularly vulnerable to contaminants in drinking water from their health care providers. For more information about these substances and their potential health effects, please call the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-453-3030.
