

MISSISSIPPI STATE DEPARTMENT OF HEALTH

BUREAU OF PUBLIC WATER SUPPLY
CALENDAR YEAR 2010 CONSUMER CONFIDENCE REPORT
CERTIFICATION FORM

Town of Ackerman
Public Water Supply Name

0100001
List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each community public water system to develop and distribute a consumer confidence report (CCR) to its customers each year.

Please Answer the Following Questions Regarding the Consumer Confidence Report

- Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)
- Advertisement in local paper
- On water bills
- Other

Date customers were informed: / /

- CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:
Date Mailed/Distributed: / /

- CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)
Name of Newspaper: Choctaw Plaindealer
Date Published: 5/25/11

- CCR was posted in public places. (Attach list of locations)
Date Posted: / /

- CCR was posted on a publicly accessible internet site at the address: www. /

CERTIFICATION

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

2010 Annual Drinking Water Quality Report
 Town of Ackerman
 PWS#: 0100001
 May 2011

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Middle Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided immediately below. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Town of Ackerman have received a moderate to higher susceptibility ranking to contamination.

If you have any questions about this report or concerning your water utility, please contact Dick Cain 662-285-6251. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of the month at 6:00 PM at the Town Hall, 45 E. Main.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during the period of January 1st to December 31st, 2010. In cases where monitoring wasn't required in 2010, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								

10. Barium	N	2008*	.078	No Range	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
11. Beryllium	N	2008*	.124	No Range	ppb	4	4	Discharge from metal refineries and coal-burning factories; discharge from electrical, aerospace, and defense industries
16. Fluoride	N	2010	1	.19 - 1	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
19. Nitrate (as Nitrogen)	N	2010	1.7	No Range	ppm	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
21. Selenium	N	2008*	.64	No Range	ppb	50	50	Discharge from petroleum and metal refineries; erosion of natural deposits; discharge from mines

Disinfection By-Products

Chlorine	N	2010	.91	.08 – 1.3	ppm	0	MDRL = 4	Water additive used to control microbes
----------	---	------	-----	-----------	-----	---	----------	---

* Most recent sample. No sample required for 2010.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", the TOWN OF ACKERMAN is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year that average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 3. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 25%.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The Town of Ackerman works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

2011 JUN -2 AM 9:17

opole to Susan on 5/25/11
needs to be larger next year.
at least as large as what
I approved!

PROOF OF PUBLICATION

THE STATE OF MISSISSIPPI COUNTY CHOCTAW

Before the undersigned authority of said county and state personally appeared Chasatie Fisher, County of Choctaw, State of Mississippi, Choctaw Plaindealer duly sworn, both depose and say that the publication of the notice hereto affixed has been made in said newspaper for 1 Consecutive week(s), to-wit:

Vol. 124, No. 21, on the 25 day of May, 2011
Vol. , No. , on the day of , 2011

2010 Annual Drinking Water Quality Report

Town of Achenman

PWS# 0100001

May 2011

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply and want you to understand the efforts we make to continually improve the water treatment process and protect and are committed to ensuring the quality of your water. Our water source is from wells drawing from the Middle W.

The source water assessment has been completed for our public water system to determine the overall water supply to identified potential sources of contamination. The general susceptibility rankings assigned to are provided immediately below. A report containing detailed information on how the susceptibility determined furnished to our public water system and is available for viewing upon request. The wells for the Town of A moderate to higher susceptibility ranking to contamination.

If you have any questions about this report or concerning your water utility, please contact Dick Cain 802 valued customers to be informed about their water utility. If you want to learn more, please attend any of meetings. They are held on the first Tuesday of the month at 9:00 PM at the Town Hall, 45 E. Main.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This is drinking water contaminants that we detected during the period of January 1st to December 31st, 2010. is wasn't required in 2010, the table reflects the most recent results. As water travels over the surface of land or naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contact of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals occurring of result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas drilling, pesticides and herbicides, which may come from a variety of sources such as agriculture, urban residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are processed and petroleum production, and can also come from gas stations and septic systems; radioactive be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water by including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. Remember that the presence of these constituents does not necessarily indicate that the water poses a health

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial co

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two 10,000.

Parts per billion (ppb) or Micrograms per liter (µg/l) - one part per billion corresponds to one minute in 2,000 or 10,000,000.

TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/MCLG	Units Measure (Test)	MCLG	MCL	Notes
-------------	---------------	----------------	----------------	---	----------------------	------	-----	-------

Inorganic Contaminants

10. Barium	N	2008*	.078	No Range	ppm	2	2	Discharge discharge erosion of
11. Beryllium	N	2008*	.129	No Range	ppb	4	4	Discharge and coal discharge se/coal/ industries
10. Fluoride	N	2010	1	10 - 1	ppm	4	4	Erosion of acidic water from and other
19. Nitrate (as Nitrogen)	N	2010	1.2	No Range	ppm	10	10	Runoff from washing of septic/ livestock
21. Selenium	N	2008*	.6A	No Range	ppb	60	60	Discharge from coal mining

Disinfection By-Products

Chlorine	N	2010	91	0.5 - 1.3	ppm	0	MCLG = 4	Water system microbes
----------	---	------	----	-----------	-----	---	----------	-----------------------

* Most recent sample. No sample required for 2010.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or is State requirements. We have learned through our monitoring and testing that some constituents have been detected has determined that your water is SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular indicator of whether or not our drinking water meets health standards. We did complete the monitoring required sampling that showed no violations present. In an effort to ensure systems complete all monitoring requirements systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young drinking water is primarily from materials and components associated with service lines and home plumbing. Our responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may be tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is
