

MISSISSIPPI STATE DEPARTMENT OF HEALTH

BUREAU OF PUBLIC WATER SUPPLY
CALENDAR YEAR 2010 CONSUMER CONFIDENCE REPORT
CERTIFICATION FORM

Mississippi State University

Public Water Supply Name

MS 0530012

List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each *community* public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

Please Answer the Following Questions Regarding the Consumer Confidence Report

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

Advertisement in local paper

On water bills

Other http://www.msstate.edu/web/water/

Date customers were informed: 05 / 15 / 2011

CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:

Date Mailed/Distributed: / /

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: Starkville Daily News

Date Published: 05 / 15 / 11

CCR was posted in public places. *(Attach list of locations)*

Date Posted: / /

CCR was posted on a publicly accessible internet site at the address: www.msstate.edu/web/water/

CERTIFICATION

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

R. Nobles/Associate Director, Utilities
Name/Title (President, Mayor, Owner, etc.)

Radioactive Contaminants									
5. Gross Alpha	N	2008*	1.196	.36 – 1.19	pCi/L	0	3	Erosion of natural deposits	
6. Radium – 228 Radium - 226	N	2008*	1.8 .334	.474 – 1.8 .085 - .334	pCi/l	0	1	Erosion of natural deposits	
Inorganic Contaminants									
10. Barium	N	2010	.087	.048 - .087	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits	
13. Chromium	N	2010	1.2	.6 – 1.2	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits	
14. Copper	N	2010	.3	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives	
16. Fluoride	N	2010	.108	.1 - .108	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories	
17. Lead	N	2010	7	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits	
Disinfection By-Products									
Chlorine	N	2010	.87	.85 - .92	ppm	0	MDRL = 4	Water additive used to control microbes	

* Most recent sample. No sample required for 2010.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The Mississippi State University works around the clock to provide top quality water to every tap. We ask that all our students help us protect our water sources, which are the heart of our community, our way of life and our children's future.

The State of Mississippi
OKTIBBEHA COUNTY

AFFIDAVIT OF PUBLICATION

Before me, in and for said county, this day personally came the undersigned representative of the Starkville Daily News, a newspaper published in the City of Starkville, of said county and state, who being duly sworn deposes and says that the publication of a certain notice, a true copy of which, is hereto affixed has been made for 1 weeks consecutively, to wit:

Dated May 15, 2011
 Dated _____, 20____
 Dated _____, 20____
 Dated _____, 20____
 Dated _____, 20____

Said representative further certifies that the several numbers of the newspaper containing the above mentioned notice have been produced and compared with the copy affixed; and that the publication thereof has been correctly made.

WITNESS MY HAND AND SEAL OF OFFICE, this the 7 day of May, A.D., 2011

2010 Annual Drinking Water Quality Report
 Mississippi State University
 FWS#: MS 0530012
 May 2011

We are pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality of the water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of water and services. We want you to understand the efforts we make to continuously improve the water treatment process and protect our resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Goode Form Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its distribution system to identify potential sources of contamination. The general susceptibility rankings assigned to each well of the distribution system are provided below. A report containing detailed information on how the susceptibility determinations were made has been sent to the public water system and is available for viewing upon request. The wells for Mississippi State University have not been ranked to higher susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Ralphi Nobles at 662-325-1859. We are pleased to provide you with information about your water utility. This report will be published on the following Mississippi State University website: <http://www.msstate.edu/water/>

We routinely monitor for constituents in your drinking water according to Federal and State laws. The table below lists all the constituents required in 2010, the table reflects the most recent results. As water travels over the surface of land or underground, it can pick up substances or contaminants from the presence of animals or from human activity. Microbial contaminants, such as viruses and bacteria, that may come from septic treatment plants, sewage systems, agricultural livestock operations and wildlife; inorganic contaminants, such as nitrates and nitrites, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, or air water runoff and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are products of industrial processes and petroleum production; and radon, which can also come from gas stations and septic systems; and radon gas which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that drinking water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of these contaminants. It is important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations that you might not be familiar with. To help you better understand these we have provided the following definitions:

Action Level - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is current evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Micrograms per liter (µg/L) - One part per million corresponds to one minute in two years or a single part in 10,000,000.

Parts per billion (ppb) or Micrograms per liter (µg/L) - One part per billion corresponds to one minute in 2,000 years or a single part in 10,000,000,000.

Contaminant	Violation 2010	Unit	Level Detected	Range of Detects for 2010	Unit Measure	MCL	MCLG	MRDL	MRDLG	Other	Health Effects
Radioactive Contaminants											
5. Gross Alpha	N	2010	1.160	0.6 - 1.16	ppm	5	5	0	0	3	Exposure of natural deposits
5. Radium-226	N	2010	1.8	0.74 - 1.8	ppm	5	5	0	0	1	Exposure of natural deposits
Inorganic Contaminants											
16. Boron	N	2010	287	248 - 287	ppm	2	2	0	0	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2010	1.2	0.74 - 1.2	ppm	100	100	100	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2010	0.3	0	ppm	1.3	1.3	AL-13	AL-13	0	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
18. Fluoride	N	2010	1.08	1 - 1.08	ppm	4	4	4	4	4	Exposure of natural deposits; erosion of natural deposits; erosion of natural deposits
17. Lead	N	2010	0	0	ppb	0	0	AL-15	AL-15	0	Corrosion of household plumbing systems; erosion of natural deposits
Disinfection By-Products											
Chlorine	N	2010	37	25 - 37	ppm	0	0	MERL = 4	0	0	Water additive used to control microbes

* Most recent sample. All samples required for 2010.

As you can see by the table, our system had no violations. We are proud that your drinking water meets or exceeds all Federal State requirements. We have learned through our monitoring and testing that some constituents have been detected; however, EPA has determined that your water is SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring at a frequency of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSUH now notifies systems of any missing samples prior to the end of the compliance period.

In present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water but cannot control the variety of materials used in plumbing components. If your water has been sitting for several hours, you can reduce the potential for lead exposure by flushing your tap for 30 seconds before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have the Safe Drinking Water Hotline or at <http://www.epa.gov/lead>. The Mississippi State Department of Health, Division of Laboratory offers lead testing. Please contact 601.378.7562 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. It is important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by using the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS, and other immune system disorders, some elderly and infants can be particularly at risk from infections. These people should seek advice from their health care providers. EPA's guidelines on microorganisms means to lessen the risk of disease. Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

Mississippi State University works around the clock to provide top quality water to every tap. We ask that all faculty, staff and students help us protect our water sources which are the heart of our community, our way of life and our children's future.
