MISSISSIPPI STATE DEPARTMENT OF HEALTH

BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2010 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

HWY 28 WATER ASSN. Public Water Supply Name

0640005 List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each community public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

Please Answer the Following Questions Regarding the Consumer Confidence Report

Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)

- Advertisement in local paper
On water bills
Other

Date customers were informed: 6/23/11

CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:

Date Mailed/Distributed: / /

CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)

Name of Newspaper: MAGEE COURIER

Date Published: 6/23/11

CCR was posted in public places. (Attach list of locations)

Date Posted: 6/23/11 MAGEE LIBRARY

CCR was posted on a publicly accessible internet site at the address: www.

CERTIFICATION

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

BOBBY SELMAW / OPERATOR Name/Title (President, Mayor, Owner, etc.)

Mail Completed Form to: Bureau of Public Water Supply/P.O. Box 1700/Jackson, MS 39215 Phone: 601-576-7518

# HIGHWAY 28 WATER ASSOCIATION

JUNE 12, 2011  
PWS ID # 640005

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from three wells drawing water from the Citronelle formation Aquifer.

Our source water assessment has been conducted and it shows our wells have a higher susceptibility to contamination.

I'm pleased to report that our drinking water meets all federal and state requirements.

This report shows our water quality and what it means.

If you have any questions about this report or concerning your water utility, please contact HWY 28 Water Assn. at 601-849-4795. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Tuesday of the month at the Highway 28 water office at 7:00 P.M.

Highway 28 Water Association routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2010. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

*Non-Detects (ND)* - laboratory analysis indicates that the constituent is not present.

*Parts per million (ppm) or Milligrams per liter (mg/l)* - one part per million corresponds to one minute in two years or a single penny in \$10,000.

*Parts per billion (ppb) or Micrograms per liter* - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

*Action Level* - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

*Treatment Technique (TT)* - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

*Maximum Contaminant Level* - The Maximum Allowed (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

*Maximum Contaminant Level Goal* - The Goal (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCL G	MCL	Likely Source of Contamination
<b>Disinfectants &amp; Disinfection By-Products</b>								
(There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.)								
Chlorine (as CL2)	N	2010	0.99 (RAA) Running Annual Average	0.96-low 1.05-high	ppm	4.0	4.0	Water additive used to control microbes
<b>Inorganic Contaminants</b>								
10. Barium*	N	04/10/06*	0.0137	0	Ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
14. Copper	N	01/01/08 TO 12/31/08*	0.20	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
17. Lead	N	01/01/08 TO 12/31/08*	0.030	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
19. Nitrate	N	9-27-2010	0.80	0	ppm	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits.

\* **MOST RECENT SAMPLE**

***Inorganic Contaminants:***

(10) Barium. Some people who drink water containing barium in excess of the MCL over many years could experience an increase in their blood pressure.

(14) Copper. Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time could experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years could suffer liver or kidney damage. People with Wilson's Disease should consult their personal doctor.

(17) Lead. Infants and children who drink water containing lead in excess of the action level could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure.

(19) Nitrate. Infants below the age of six months who drink water containing Nitrate in excess of the MCL could become seriously ill and if untreated may die. Symptoms include shortness of breath and blue-baby syndrome.

\*\*\*\*\* Additional Information for Lead \*\*\*\*\*

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Highway 28 Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

\*\*\*\*\* A MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING \*\*\*\*\*

In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007 - December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice.

Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. The Bureau of Public Water Supply is taking action to resolve this issue as quickly as possible. If you have any questions, please contact Melissa Parker, Deputy Director, Bureau of Public Water Supply, at 601-576-7518.

Please call our office if you have questions.

# PROOF OF PUBLICATION

2011 JUN 29 PM 2: 25

THE STATE OF MISSISSIPPI  
COUNTY OF SIMPSON

Personally appeared before me, the undersigned Notary Public, in and for the County and State aforesaid Shelley Fairchild who being by me duly sworn states on oath, that she is Leswick of The Magee Courier a newspaper published in the City of Magee, State and County aforesaid, and that the publication of the notice, a copy of which is hereto attached, has been made in said paper 1 times, as follows:

In Vol. 114 No. 8 Date 23 day of June 2011.

In Vol. \_\_\_\_\_ No. \_\_\_\_\_ Date \_\_\_\_\_ day of \_\_\_\_\_ 2011.

# The amazing grace of our Lord

"But where sin abounded, grace did much more abound" (Romans 5:20). God's grace is indeed amazing! What an amazing thing that God would save the undeserving, the ill deserving, the hell deserving. God goes not save the good folks, He saves sinners. Now, if you know yourself to be a sinner, that is most welcome news! (I know in good writing you are not supposed to use many exclamation points, but I am not trying to be an accomplished writer, I am publishing the gospel for sinners, and that gets me excited!)

**THE NARROW WAY**  
Thomas Ray Floyd

horrible idolater and even sacrificed his own children. What a wretch. But God saved that old sinner and he is in heaven right now.

Then I think of the woman in Luke seven that washed the Saviour's feet with her tears. She had been a filthy harlot, but the Saviour's grace was greater than her sins, and He said "thy faith hath saved thee." Then I think of the dying thief (Luke 23:39-43). All he had was a life of crime and sin to recommend himself to the dear Saviour. He could not go back and change anything. He was nailed to a cross, and he couldn't go and get baptized.

It was too late to reform and start living a good moral life. All he could do was beg the dear Saviour "Lord remember me." He did not try to pray a long elaborate prayer, he just said "Lord, remember me." And the Saviour remembered him and that thief was a Christian for only a few hours at the most, but he has been in heaven for over two thousand years, and no one can throw him out. And then I think of that old self righteous persecutor, Saul of Tarsus.

He hated Christ and His gospel and His Church. But God had mercy on that blasphemer and saved him on the Damascus road while he was yet breathing out threatening

and slaughter against Christ.

But mostly when I think of God's grace abounding to me the chief of sinners, worse than all these I have mentioned. I see how amazing God's grace is. I was as vile as sinner could be. I was worse than Manasseh and the harlot in Luke seven, and the dying thief and Saul of Tarsus put together. But God set His affection on

me in the eternities and saved the vilest of the vile.

The blood of Christ availed for me. "I once was lost, but now am found!"

Are any of my readers vile sinners who are in agony of soul? Is there some soul out there broken hearted because you know you have offended such a good and holy God? Well, I have the gospel for you. God's grace

is greater than all our sin. God justifies the ungodly.

You may come to Christ as you read these words. You don't have to wait until you get to the church this Sunday.

You may be saved from your sin as Manasseh, the harlot in Luke seven, the dying thief, Saul of Tarsus, and millions of other sinners to whom God's grace abounded. As dear

Joseph Hart wrote, "come ye sinners, poor and needy, weak and wounded, sick and sore, Jesus ready stands to save you, full of pity, joined with power." Plee to the Saviour of sinners. Your sin is not as great as His grace and you will find that His grace is indeed amazing. May the Holy Spirit draw you to Christ this very moment.

## 2010 Annual Drinking Water Quality Report Highway 28 Water Association PWS ID#: 640005

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from three wells drawing water from the Citronelle formation Aquifer.

Our source water assessment was conducted and it shows our wells have a higher susceptibility to contamination.

For pleased to report that our drinking water meets all federal and state requirements.

This report shows our water quality and what it means.

If you have any questions about this report or concerning your water utility, please contact HWY 28 Water Assn. at 601.4795. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Tuesday of the month at the Highway 28 water office at 7:00 PM.

Highway 28 Water Association routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2010. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It is important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Non-Detects (ND) - laboratory analysis indicates that the constituent is not present.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000,000.

Action Level - the concentration of a constituent which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a constituent in drinking water.

Maximum Contaminant Level - The Maximum Allowed (MCL) is the highest level of a constituent that is allowed in drinking water. MCLs are set as close to the MCLs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - The Aesthetic (MCLG) is the level of a constituent in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

TEST RESULTS									
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/AEL	Unit Measurement	MCL G	MCL	Likely Source of Contamination	
<b>Disinfectants &amp; Disinfection By-Products</b>									
(There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants)									
Chlorine (as CL <sub>2</sub> )	N	2010	0.99 (RAA) Running Annual Average	0.96-low 1.05-high	ppm	4.0	4.0	Water additive used to control microbes	
<b>Inorganic Contaminants</b>									
10. Barium*	N	04/10/06*	0.0137	0	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits	
14. Copper	N	01/01/08 TO 12/31/08*	0.20	0	ppm	1.3	AL-1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives	
17. Lead	N	01/01/08 TO 12/31/08*	0.030	0	ppb	0	AL-15	Corrosion of household plumbing systems; erosion of natural deposits	
19. Nitrate	N	9-27-2010	0.80	0	ppm	10	10	Runoff from fertilizer use; leaching from septic tanks; sewage; erosion of natural deposits.	

\* Not tested in 2010. No sample required for 2010.  
 (10) Barium. Some people who drink water containing barium in excess of the MCL over many years could experience an increase in their blood pressure.  
 (14) Copper. Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over many years could suffer liver or kidney damage. People with Wilson's Disease should restrict their intake of copper.  
 (17) Lead. Excess lead in drinking water can cause lead poisoning in children. Lead in excess of the action level could also cause reproductive effects in their physical or mental development. Children could also suffer effects in their attention span and learning ability. Adults who drink this water every day may develop kidney problems or high blood pressure.  
 (19) Nitrate. Infants below the age of six months who drink water containing Nitrate in excess of the MCL could become seriously ill and if untreated may die. Symptoms include: shortness of breath and lack of energy.

\*\*\*\*\* Additional Information for Lead \*\*\*\*\*  
 If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components used in water pipes and home plumbing. Highway 28 Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline at 1-800-426-4791.  
 \*\*\*\*\* A MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING \*\*\*\*\*  
 In accordance with the Radiological Protection Act, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007 - December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of an action by the public water supply, MSDH was required to issue a violation. The Bureau of Public Water Supply is taking action to resolve this issue as quickly as possible. ### BID NOTICE

**FIVE COUNTY CHILD DEVELOPMENT PROGRAM, INC. POST OFFICE BOX 1195 1118 3RD STREET PRENTISS, MISSISSIPPI 39474**

Five County Child Development Program, Inc. is soliciting sealed bids for health insurance coverage to include:

- 1) Health
- 2) Vision
- 3) Life
- 4) Dental
- 5) Long-Term Disability

For the period of October 1, 2011 through September 30, 2012. All interested bidders should contact Sherry Smith at (601) 792-5191, or email [ssmith@fivecountys.org](mailto:ssmith@fivecountys.org) for further information. Sealed bids should be received at the above address by 4:00 pm on Thursday, August 18, 2011.

Official bids must be clearly marked "BID ENCLOSED" on the outside of the envelope. Five County Child Development Program, Inc. reserves the right to accept/reject any and/or all bids, and waive any informality.

Jonathan Bines
