

MISSISSIPPI STATE DEPARTMENT OF HEALTH

BUREAU OF PUBLIC WATER SUPPLY

CALENDAR YEAR 2010 CONSUMER CONFIDENCE REPORT CERTIFICATION FORM

CITY OF FAYETTE

Public Water Supply Name

0320001

List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each community public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

Please Answer the Following Questions Regarding the Consumer Confidence Report

Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)

- Advertisement in local paper
On water bills
Other

Date customers were informed: 5 / 19 / 11

CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:

Date Mailed/Distributed: / /

CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)

Name of Newspaper: The Fayette Chronicle & The Glory Journal

Date Published: 5 / 19 / 11 & 5-25-11

CCR was posted in public places. (Attach list of locations)

Date Posted: 5 / 19 / 11

CCR was posted on a publicly accessible internet site at the address: www.

CERTIFICATION

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

James Primon
Name/Title (President, Mayor, Owner, etc.)

2010 Annual Drinking Water Quality Report
 Town of Fayette
 PWS ID #: 0320001
 May 2011

2011 MAY 18 PM 1:03

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Catahoula Formation Aquifer.

If you have any questions about this report or concerning your water utility, please contact James Simon at 601- 786-3621. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of each month at 6:00 PM at the Fayette City Hall.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided immediately below. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Town of Fayette have received a lower to moderate susceptibility ranking to contamination.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during for the period of January 1st to December 31st, 2010. In cases where monitoring wasn't required in 2010, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
10. Barium	N	2009*	.165	No Range	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits

14. Copper	N	2008*	.2	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2009*	.162	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2008*	15	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Disinfection By-Products								
Chlorine	N	2010	1.18	.8 – 1.6	ppm	0	MDRL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2010.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

Significant Deficiencies

During a sanitary survey conducted on 5/17/10, the Mississippi State Department of Health cited the following deficiency:

1). Inadequate security measures

Corrective actions: The system is currently under a Bilateral Compliance Agreement with the Mississippi State Department of Health to have the fences repaired by 6/02/11.

2). Lack of redundant mechanical components where treatment is required

Corrective actions: The system is currently under a Bilateral Compliance Agreement with the Mississippi State Department of Health to have the redundant chlorination installed by 12/31/2012.

3). Inadequate internal cleaning/maintenance of storage tanks

Corrective actions: The system is in a Bilateral Compliance Agreement with the Mississippi State Department of Health to have the tanks inspected, cleaned, and painted by 6/30/2013.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

We at the Town of Fayette work around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

2010 Annual Drinking Water Quality Report
 Town of Fayette
 PWSID # 0520041
 May 2011

With pleasure we present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water we provide to you every day. Our overall goal is to provide you with a safe and dependable supply of drinking water. We are committed to providing the highest quality water possible. We are committed to providing the highest quality water possible. We are committed to providing the highest quality water possible.

The annual water assessment has been completed for our public water system to determine the overall acceptability of its drinking water supply to identify potential sources of contamination. The general microbiological testing conducted to each well of the system are water supply to identify potential sources of contamination. The general microbiological testing conducted to each well of the system are water supply to identify potential sources of contamination.

We routinely monitor for contaminants in your drinking water according to the following table. This table lists the maximum contaminant level (MCL) for each contaminant. The MCL is the highest level of a contaminant that is allowed in drinking water.

Maximum Contaminant Level (MCL) - The "Maximum Allowable" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLG as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Maximum Contaminant Level Goal" (MCLG) is the highest level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs do not apply to all contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Contaminant	Unit	Date Established	MCL	MCLG	MRDLG	MRDL	MCLL	LSE	Source of Contamination
Inorganic Contaminants									
Asbestos	N	2006	100	No Report	ppm	2	2	2	Discharge of drilling wastes, erosion of natural deposits
Copper	N	2006	1.3	0	ppm	1.3	AL-13	4	Corrosion of household plumbing system, erosion of natural deposits, leaching from wood pipes/tubing
Fluoride	N	2006	1.0	No Report	ppm	4	4	4	Erosion of natural deposits, water intake which promotes strong leach, discharge from fertilizer and aluminum fixtures
Lead	N	2006	1.5	0	ppm	0	AL-15	4	Corrosion of household plumbing system, erosion of natural deposits
Disinfection By-Products									
Chlorine	N	2010	1.0	0-1.5	ppm	0	MRDL-4	4	Water residue used in control chamber

Most recent sample. No sample required for 2010.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to assure systems complete all monitoring requirements, MSDH now holds systems of any existing samples prior to the end of the compliance period.

Recent Deficiencies
 A violation report was issued on 07/17/10 by the Mississippi State Department of Health cited the following deficiencies:
 1. Inadequate security measures.
 2. The system is currently under a Biennial Compliance Agreement with the Mississippi State Department of Health in accordance with 6500211.

3. The system is currently under a Biennial Compliance Agreement with the Mississippi State Department of Health in accordance with 6500212.
 4. The system is currently under a Biennial Compliance Agreement with the Mississippi State Department of Health in accordance with 6500213.

5. The system is currently under a Biennial Compliance Agreement with the Mississippi State Department of Health in accordance with 6500213.
 6. The system is currently under a Biennial Compliance Agreement with the Mississippi State Department of Health in accordance with 6500213.

7. The system is currently under a Biennial Compliance Agreement with the Mississippi State Department of Health in accordance with 6500213.
 8. The system is currently under a Biennial Compliance Agreement with the Mississippi State Department of Health in accordance with 6500213.

9. The system is currently under a Biennial Compliance Agreement with the Mississippi State Department of Health in accordance with 6500213.
 10. The system is currently under a Biennial Compliance Agreement with the Mississippi State Department of Health in accordance with 6500213.

11. The system is currently under a Biennial Compliance Agreement with the Mississippi State Department of Health in accordance with 6500213.
 12. The system is currently under a Biennial Compliance Agreement with the Mississippi State Department of Health in accordance with 6500213.
