

2011 JUN -2 AM 9: 24

MISSISSIPPI STATE DEPARTMENT OF HEALTH

BUREAU OF PUBLIC WATER SUPPLY

**CALENDAR YEAR 2010 CONSUMER CONFIDENCE REPORT
CERTIFICATION FORM**

City of Eupora
Public Water Supply Name

0780005

List PWS ID #s for all Water Systems Covered by this CCR

The Federal Safe Drinking Water Act requires each *community* public water system to develop and distribute a consumer confidence report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed to the customers, published in a newspaper of local circulation, or provided to the customers upon request.

Please Answer the Following Questions Regarding the Consumer Confidence Report

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper
 On water bills
 Other _____

Date customers were informed: 5/26/11

CCR was distributed by mail or other direct delivery. Specify other direct delivery methods:

Date Mailed/Distributed: / /

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: Webster Progress

Date Published: 5/26/11

CCR was posted in public places. *(Attach list of locations)*

Date Posted: / /

CCR was posted on a publicly accessible internet site at the address: www. _____

CERTIFICATION

I hereby certify that a consumer confidence report (CCR) has been distributed to the customers of this public water system in the form and manner identified above. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

[Signature] - Mayor
Name/Title (President, Mayor, Owner, etc.)

2010 Annual Drinking Water Quality Report
City of Eupora
PWS#: 0780005
May 2011

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies. Our water source is from wells drawing from the Lower Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the City of Eupora have received a moderate ranking in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Benny Neal at 662.258.2291 or 662.258.3565. We want our valued customers to be informed about their water utility. If you want to learn more, please join us at any of our regularly scheduled meetings. They are held on the first Monday of the month at 6:00 PM at the Eupora City Hall.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2010. In cases where monitoring wasn't required in 2010, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL/MRDL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
10. Barium	N	2010	.01	.009 - .01	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits

13. Chromium	N	2010	2.2	2.1 – 2.2	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2010	.1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2010	.58	.09	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2010	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits

Disinfection By-Products

82. TTHM [Total trihalomethanes]	N	2010	6.36	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2010	.41	.33 - .78	ppm	0	MRDL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2010.

** Fluoride level is routinely adjusted to the MS State Dept of Health's recommended level of 0.7 - 1.3 mg/l.

Our system received a monitoring violation for not sending in our 2009 Consumer Confidence Report into the MS State Dept of Health by the deadline of July 1, 2010.

As you can see by the table, our system had no contaminant violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

Significant Deficiencies

During a sanitary survey conducted on 12/29/10, the Mississippi State Department of Health cited the following deficiency:

Inadequate internal cleaning/maintenance of storage tanks

Corrective actions: The system is in a Bilateral Compliance Agreement with the Mississippi State Department of Health to complete the inspection of storage tanks located at Lagrange Hill, Walthall Hill and Bellefontaine. Additionally, the painting of the 5000,000 gallon tank. All deficiencies are scheduled to be completed by 8/01/11.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", the CITY OF EUPORA is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year that average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 0. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 4%.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The City of Eupora works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

PROOF OF PUBLICATION

THE STATE OF MISSISSIPPI COUNTY WEBSTER

Before the undersigned authority of said county and state personally appeared Chasatie Fisher, County of Webster, State of Mississippi, Webster Progress Times duly sworn, both depose and say that the publication of the notice hereto affixed has been made in said newspaper for 1 Consecutive week(s), to-wit:

Vol 84, No 21, on the 26 day of May, 2011
Vol _____, No. _____, on the _____ day of _____, 2011
Vol. _____, No. _____, on the _____ day of _____, 2011
Vol. _____, No. _____, on the _____ day of _____, 2011
Vol. _____, No. _____, on the _____ day of _____, 2011
Vol. _____, No. _____, on the _____ day of _____, 2011

Sworn to and subscribed to this the 27 day of May 2011
me the undersigned Notary Public of said County and State.

2010 Annual Drinking Water Quality Report
 City of Eugene
 PWS# 0780005
 May 2011

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We need you to understand the science we use to consistently improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies. Our water comes from lands draining from the Lower Willamette River.

The annual water treatment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been forwarded to our public water system and is available by request upon request. The water for the City of Eugene has been processed in accordance with the requirements of the Safe Drinking Water Act.

If you have any questions about the report or concerning your water utility, please contact Barry Neal at 503.259.2201 or 503.259.2000. We would be pleased to answer your questions. If you are a resident customer, please call us at 503.259.2000. If you are a business customer, please call us at 503.259.2000. They are held on the first Monday of the month at 10:00 AM or 1:00 PM at the Eugene City Hall.

We strongly encourage for consumers to their drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2010. It details when monitoring occurred, the results of the tests, the table reflects the most recent results. As water flows over the surface of land or underground, it dissolves naturally occurring minerals and in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activities. Industrial discharges, such as, waste and sewage, can be naturally occurring, such as, pesticides and herbicides, which may come from agricultural operations and urban activities. Other contaminants, such as, lead and copper, can be naturally occurring, such as, lead and copper, which may come from natural sources. Other contaminants, such as, lead and copper, can be naturally occurring, such as, lead and copper, which may come from natural sources.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Maximum Contaminant Level (MCL) - The "Maximum Allowable" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLG as feasible using the best available treatment technology.
Maximum Contaminant Level Goal (MCLG) - The "Ideal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that additional disinfectant is necessary for control microbial contaminants.
Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Fluoride (ppm) or Arsenic (ppm) per year (ppm) - one part per million compounds to add fluoride in two years or a single penny in \$10,000,000. Fluoride (ppm) or Arsenic (ppm) per year (ppm) - one part per million compounds to add fluoride in 2,000 years or a single penny in \$10,000,000.

TEST RESULTS

Contaminant	Year	Date Collected	Level Detected	Range of Values or # of Samples Exceeding MCL/MCLG/ARL	Use	MCLG	MCL	MRDL	MRDLG	Lawy Source of Contamination
Inorganic Contaminants										
10. Barium	N	2010	01	009 - 011	ppm	2	2			Discharge of drilling wastes, discharge from metal refineries, erosion of natural deposits
13. Chromium	N	2010	2.3	0.1 - 2.3	ppm	100	100			Discharge from steel and other metal refineries, erosion of natural deposits
14. Copper	N	2010	1	0	ppm	1.5	1.5	AL=1.5		Corrosion of household plumbing systems, erosion of natural deposits, leaching from wood preservatives
16. Fluoride	N	2010	08	08	ppm	1	4			Leaching of natural deposits, water additive which promotes strong bone, discharge from fertilizer and uranium facilities
17. Lead	N	2010	1	0	ppm	0	AL=4			Corrosion of household plumbing systems, erosion of natural deposits
Disinfection By-Products										
22. THM5	N	2010	1.08	No Range	ppb	0	80			By-product of disinfection water disinfection
Chloroform	N	2010	41	33 - 76	ppb	0	100			Water additive used to control microbes

* Based on 100 samples. No sample exceeded for THM5.
 † Fluoride level is routinely adjusted to the AASD State Dept of Health's recommended level of 0.7 - 1.3 ppm.
 ‡ Our system received a monitoring violation for not sending in our 2009 Consumer Confidence Report filed the MS State Dept of Health by the deadline of July 1, 2010.

All you can see by the table, our system had no contaminant violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water is SAFE to drink.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems continue all monitoring requirements, MCLG's are notified systems of any testing samples prior to the rest of the compliance period.

Significant Determinations
 During a drinking water compliance audit on 12/29/10, the Massachusetts State Department of Health and the MS State Dept of Health by the deadline of July 1, 2010. The system is in a Minor Compliance Agreement with the Massachusetts Department of Health to complete the compliance audit. The system is in a Minor Compliance Agreement with the Massachusetts Department of Health to complete the compliance audit. The system is in a Minor Compliance Agreement with the Massachusetts Department of Health to complete the compliance audit.

A general elevated level of lead can cause serious health problems, especially for pregnant women whose fetuses are exposed to lead. Lead in drinking water is primarily from lead pipes and components associated with service lines and home plumbing. Our water system is responsible for water quality. We strongly encourage for consumers to their drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2010. It details when monitoring occurred, the results of the tests, the table reflects the most recent results. As water flows over the surface of land or underground, it dissolves naturally occurring minerals and in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activities. Industrial discharges, such as, waste and sewage, can be naturally occurring, such as, pesticides and herbicides, which may come from agricultural operations and urban activities. Other contaminants, such as, lead and copper, can be naturally occurring, such as, lead and copper, which may come from natural sources. Other contaminants, such as, lead and copper, can be naturally occurring, such as, lead and copper, which may come from natural sources.

To comply with the "Reduction of Drinking Water Fluoridation of Community Water Supplies," the CITY OF EUGENE is required to report certain results regarding its fluoridation of its water system. The number of months in the previous calendar year that average fluoride service results were within the optimal range of 0.7-1.3 ppm was 9. The percentage of service areas collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 94%.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be inorganic, organic or chemical in nature and can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The City of Eugene works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water resources, which are the heart of our community, our way of life and our children's future.
