assessment has been completed for the water supply to determine the overall susceptibility of its potential sources of contamination. The water supply for the Town of Florence received its ranking to contamination.

a copy of which is hereto attached, was published in said newspaper One (1) week, as follows, to-wit:

report that our drinking water meets all federal and state requirements.

Vol 164 No. 49 on the 27th day of June, 2012

For questions about this report or concerning your water utility, please contact Jacob Walker at 601-371-1111. We want our valued customers to be informed about their water utility. If you want to learn more, please call or attend one of our regularly scheduled meetings. They are held on the first and third Tuesday of each month at 7:00 p.m.

Marcus Bowers
MARCUS BOWERS, Publisher

Since we routinely monitor for constituents in your drinking water according to Federal and State laws, the results of our monitoring for the period of January 1st to December 31st, 2011, show that the water is safe to drink. However, if the land or underground, it can pick up substances or contaminants such as microbes, inorganic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

Sworn to and subscribed before me by the aforementioned Marcus Bowers this 27th day of June, 2012

Since you will find many terms and abbreviations you might not be familiar with. To help you better understand the terms we've provided the following definitions:

Frances Conger
FRANCES CONGER
My Commission Expires: January 25, 2014

Maximum Contaminant Level (MCL) - The maximum concentration of a contaminant which, if exceeded, triggers treatment or other requirements that the water utility must follow.

Maximum Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Allowable Level (MAL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
