MISSISSIPPI STATE DEPARTMENT OF HEALTH
BUREAU OF PUBLIC WATER SUPPLY
CCR CERTIFICATION FORM
CALENDAR YEAR 2012 2013

City of New Albany

Public Water Supply Name

0730006

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. Since this is the first year of electronic delivery, we request you mail or fax a hard copy of the CCR and Certification Form to MSDH. Please check all boxes that apply.

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper (attach copy of advertisement)
- On water bills (attach copy of bill)
- Email message (MUST Email the message to the address below)
- Other _____

Date(s) customers were informed: ____ / ____ / ____

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: ____ / ____ / ____

CCR was distributed by Email (MUST Email MSDH a copy) Date Emailed: ____ / ____ / ____

- As a URL (Provide URL _____)
- As an attachment
- As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: New Albany Gazette *↳ will be sent ASAP per memo*

Date Published: 06 / 18 / 2014

CCR was posted in public places. *(Attach list of locations)* Date Posted: ____ / ____ / ____

CCR was posted on a publicly accessible internet site at the following address **(DIRECT URL REQUIRED)**:

CERTIFICATION

I hereby certify that the 2012 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

2013 Annual Drinking Water Quality Report
City of New Albany
PWS ID 0730006
April 9, 2014

Corrected CCR

Is my water safe?

Last year, as in years past, your tap water met all U.S. Environmental Protection Agency (EPA) and state drinking water health standards. Local Water vigilantly safeguards its water supplies and once again we are proud to report that our system has not violated a maximum contaminant level or any other water quality standard.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

Our water comes from 7 deep wells located in the Eutaw-McShan and Ripley Aquifer.

Source water assessment and its availability

Our source water assessment has been completed. Our wells were ranked lower in terms of susceptibility to contamination. For a copy of the report, please contact our office at 662-534-1041.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewerage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges,

which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Other Information

April 1, 2013 MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING

In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007 - December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that as of this date, your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any questions, please contact Karen Walters, Deputy Director, Bureau of Public Water Supply, at 601-576-7518

Additional information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and your children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. CITY OF NEW ALBANY is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Additional Information for Arsenic

While your drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effect against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems. 'Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes'.

Water Quality Data Table

The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. The presence of contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently.

Contaminants	MCLG or MRDLG	MCL, TT, or MRDL	Your Water	Range Low High	Sample Date	Violation	Typical Source
Disinfectants & Disinfection By-Products							
(There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.)							
Chlorine (as Cl ₂) (ppm)	4	4	1.00	0.80 1.300	2013	No	Water additive used to control microbes
TTHMs [Total Trihalomethanes] (ppb)	NA	80	16.5	NA	2013	No	By-product of drinking water disinfection
HAA5's [Haloacetic Acids] (ppb)	NA	60	2.0	NA NA	2013	No	By-products of drinking water disinfection
Inorganic Contaminants							
Arsenic (ppb)	0	6	0.5	NA	2013	No	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
Barium (ppm)	2	2	0.1487	NA	2013	No	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Chromium (ppb)	100	100	2.5	NA	2013	No	Discharge from steel and pulp mills; Erosion of natural deposits
Cyanide [as Free Cn] (ppb)	200	200	.000071	NA	2013	No	Discharge from plastic and fertilizer factories; Discharge from steel/metal factories
Fluoride (ppm)	4	4	0.863	NA	2013	No	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
Nitrate [measured as Nitrogen] (ppm)	10	10	0.08	NA	2013	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
Nitrite [measured as Nitrogen] (ppm)	1	1	0.02	NA	2013	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
Selenium (ppb)	50	50	2.50	NA	2013	No	Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines

<u>Contaminants</u>	<u>MCLG</u>	<u>AL</u>	<u>Your Water</u>	<u>Sample Date</u>	<u># Samples Exceeding AL</u>	<u>Exceeds AL</u>	<u>Typical Source</u>
Inorganic Contaminants							
Copper - action level at consumer taps (ppm)	1.3	1.3	0.5	2013	0	No	Corrosion of household plumbing systems; Erosion of natural deposits
Lead - action level at consumer taps (ppb)	0	15	2.0	2013	0	No	Corrosion of household plumbing systems; Erosion of natural deposits

Unit Descriptions	
<u>Term</u>	<u>Definition</u>
ppm	ppm: parts per million, or milligrams per liter (mg/L)
ppb	ppb: parts per billion, or micrograms per liter (µg/L)
positive samples/month	positive samples/month: Number of samples taken monthly that were found to be positive
NA	NA: not applicable
ND	ND: Not detected
NR	NR: Monitoring not required, but recommended.

Important Drinking Water Definitions	
<u>Term</u>	<u>Definition</u>
MCLG	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
MCL	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
MNR	MNR: Monitored Not Regulated
MPL	MPL: State Assigned Maximum Permissible Level

Violations and Exceedances

For more information please contact:

The 2013 Annual Drinking Water Quality Report will not be mailed.
For additional information contact our office at 662-534-1041 or fax 662-534-0864.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies". The CITY OF NEW ALBANY is required to report certain results pertaining to the fluoridation of our water system. The number of months in the previous calendar year that average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 12. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 99%.

2013 Annual Drinking Water Quality Report
City of New Albany
PWS ID 0730006
April 9, 2014

Is my water safe?
Last year, as in years past, your tap water met all U.S. Environmental Protection Agency (EPA) and state drinking water health standards. Local Water vigilantly safeguards its water supplies and once again we are proud to report that our system has not violated a maximum contaminant level or any other water quality standard.

Do I need to take special precautions?
Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?
Our water comes from 7 deep wells located in the Butav-McShan and Ripley Aquifer.

Source water assessment and its availability
Our source water assessment has been completed. Our wells were ranked lower in terms of susceptibility to contamination. For a copy of the report, please contact our office at 662-534-1041.

Why are there contaminants in my drinking water?
Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewerage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater runoff, industrial, or domestic wastewater discharges,

which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. fees and expenses of sale; NOW, THEREFORE, I, Les Alvis, as Substitute Trustee under said deeds of trust, will on the 26th day of June, 2014, offer for sale at public outcry for cash to the highest and best bidder, and sell within legal hours (being between the hours of 11:00 A.M. and 4:00 P.M.), at the North front door of the Union County Courthouse, in New Albany, Union County, Mississippi, the following described property and land lying and being situated in Union County, Mississippi, being more particularly described as follows, to-wit:

LOT 27 NORTH SHERMAN ESTATES; Commencing at a p.k. nail (found) that is recognized as being at the Southwest corner of the Southwest Quarter of Section 23, Township 8 South, Range 4 East, Union County, Mississippi; thence run East 1329.09 feet; thence run North for 2057.82 feet to a point on the West right of way of the Burlington Northern & Santa Fe Railroad, said point being South for 588.90 feet from a point given to be the Northeast corner of the West Half of the Southwest Quarter of Section 23, Township 8 South, Range 4 East, Union County, Mississippi, as is recorded by Instrument Number: 060008; thence run North 41 degrees 05 minutes 00 seconds West for 1382.02 feet; thence run North 41 degrees 16 minutes 00 seconds West for 285.78 feet to a three eighth's inch rebar (found) on the West right of way of the Burlington Northern & Santa Fe Railroad; thence leaving said railroad right of way run South 11 degrees 39 minutes 00 seconds West for 374.38 feet to a half inch rebar (set) for a point of beginning; thence run South 11 degrees 39 minutes 00 seconds West for 70.00 feet to a half inch rebar (set); thence run North 78 degrees 21 minutes 00 seconds West for 207.55 feet to a half inch rebar (set) on the East line of North Sherman Drive; thence run North 11 degrees 39 minutes 00 seconds East along the East line of said street for 70.00 feet to a half inch rebar (set); thence leaving said street run South 78 degrees 21 minutes 00 seconds East for 207.55 feet to the point of beginning.

Lying partly in the Northwest Quarter of Section 23, Township 8 South, Range 4 East, Town of Sherman, Union County, Mississippi, and partly in the Northeast Quarter of Section 22, Township 8 South, Range 4 East, Town of Sherman, Union County, Mississippi, and contains 0.334 acres.

Bearings are based on record description and monuments found at the northeast and southeast corner of said subdivision.

ALSO AN EASEMENT FOR INGRESS AND EGRESS OVER AND ACROSS NORTH SHERMAN

ESTATES DRIVE DESCRIBED AS FOLLOWS:

Commencing at a p.k. nail (found) that is recognized as being at the Southwest corner of the Southwest Quarter of Section 23, Township 8 South, Range 4 East, Union County, Mississippi; thence run East for 1329.09 feet; thence run North for 2057.82 feet to a point on the west right-of-way of the Burlington Northern & Santa Fe Railroad, said point being South for 588.90 feet from a point given to be the Northeast corner of the West Half of the Southwest Quarter of Section 23, Township 8 South, Range 4 East, Union County, Mississippi as is recorded by Instrument No. 060008; thence run North 41 degrees 00 minutes 00 seconds West for 1382.02 feet; thence run North 41 degrees 16 minutes 00 seconds West for 285.78 feet to a three eighth's inch rebar (found) on the west right-of-way of the Burlington Northern & Santa Fe Railroad; thence leaving said railroad right-of-way run South 11 degrees 39 minutes 00 seconds West for 1464.00 feet to a three eighth's inch rebar (found) on the north right-of-way of Mississippi Highway No. 178; thence run along said right-of-way with a curve to the right, having a radius of 2691.26 feet, a chord bearing of North 69 degrees 54 minutes 40 seconds West for a chord distance of 209.82 feet to a point on the east line of North Sherman Drive for a point of beginning; thence run along said right-of-way with a curve to the right, having a radius of 2691.26 feet, a chord bearing of North 67 degrees 08 minutes 04 seconds West for a chord distance of 59.97 feet to a point on the west line of North Sherman Drive; thence leaving said right-of-way run North 11 degrees 39 minutes 00 seconds East along the west line of said street for 1480.80 feet; thence run with a curve to the left, having a radius of 30.00 feet, a chord bearing of North 24 degrees 09 minutes 08 seconds West for a chord distance of 35.10 feet; thence run with a curve to the right, having a radius of 50.00 feet, a chord bearing of North 48 degrees 37 minutes 59 seconds East for a chord distance of 94.78 feet; thence run with a curve to the right, having a radius of 77.14 feet, a chord bearing of South 5 degrees 37 minutes 11 seconds East for a chord distance of 45.53 feet to a point on the east line of North Sherman Drive; thence run South 11 degrees 39 minutes 00 seconds West along the east line of North Sherman Drive for 1551.42 feet to the point of beginning.

Lying and being in the Southwest Quarter and Northwest Quarter of Section 23, Township 8 South, Range 4 East, Town of Sherman, Union County, Mississippi and the Southeast Quarter and Northeast Quarter of Section 22, Township 8 South, Range 4 East, Town of Sherman, Union County, Mississippi, and contains 0.334 acres.

MISSISSIPPI

Bearings are based on record description and monuments found at the northeast and southeast corners of said subdivision.

I WILL CONVEY only such title as is vested in me as Substitute Trustee.

WITNESS MY SIGNATURE, this the 27th day of May, 2014.

2013 Annual Drinking Water Quality Report
Alpine Water Association
PWS#: 0730001
June 2014

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Eulaw Formation Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Alpine Water Association have received lowest susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Teresa O'Callaghan at 662.316.6194. We want our valued customers to be informed about their water utility. If you want to learn more, please attend the regular scheduled meetings held on the second Tuesday of March, July, September and December at 7:00 PM at the Alpine Fire Department.
