CCR CERTIFICATION
CALENDAR YEAR 2015

Young's Water & Sewer District, Inc
Public Water Supply Name

PWS-MS0220064
List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper (attach copy of advertisement)
- On water bills (attach copy of bill) *for June 30, 2016 copy included*
- Email message (MUST Email the message to the address below)
- Other _____

Date(s) customers were informed: / /

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: / /

CCR was distributed by Email (MUST Email MSDH a copy) Date Emailed: / /

- As a URL (Provide URL _____)
- As an attachment
- As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: The Coffeeville Courier

Date Published: 6/2/16

CCR was posted in public places. *(Attach list of locations)* office Date Posted: 6/2/16

CCR was posted on a publicly accessible internet site at the following address **(DIRECT URL REQUIRED)**: _____

CERTIFICATION

I hereby certify that the 2015 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

**Young's Water & Sewer District, Inc.
2015 Consumer Confidence Report**

PWS# 0220064 & 022065

Young's Water & Sewer District, Inc. met all State and U S Environmental Protection Agency (EPA) drinking water health standards during 2015. These standards help us keep your drinking water safe for use. Your drinking water comes from 2 deep wells drawing water from the Middle & Lower Wilcox Aquifers.

The Source Water Assessment is in the office and on file for viewing. For more information contact the office at 662-628-1035.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. The tables below list the contaminants detected in your drinking water in 2015. EPA and MSDOH require monitoring for certain contaminants less than once a year since concentration of these contaminants do not change frequently. The dates are noted.

PWS#-0220064 District 1- Dividing Ridge Well

Contaminants:	MCLG OR MRDLG	TT OR MRDL	Your Water	Range Low/High	Sample Date	Violation	Typical Source
---------------	---------------	------------	------------	----------------	-------------	-----------	----------------

Disinfectants & Disinfectant By-Products:

(There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants)

Chlorine (0999) (ppm)	4	4	0.90	0.42-2.00	2015	No	Water additive used to control microbes
	MCL	MCLG					
TTHMS SM1 (ppb)	80	N/A	17	17	2014	No	By-product of drinking water disinfectant.
HAA5 SM1 (ppb)	60	N/A	9	9	2014	No	By-product of drinking water disinfectant.

Inorganic Contaminants:

Barium (ppm)	2	N/A	0.0674	0.0674	2014	No	Discharge of drilling waste, Discharge from metal refineries. Erosion of natural deposits
Chromium (ppm)	0.1	N/A	0.003	0.003	2014	No	Discharge from steel & pulp mills Erosion of natural deposits

	MCL	AL	Your Water	# Samples	Sample Date	Violation	Typical Sources
Copper 90th (Action Level) at consumer taps (mg/L)	1.3	1.3	0.6	5	2012-14	0	Corrosion of household plumbing systems Erosion of natural deposits

Lead 90th (Action Level) at consumer taps mg/L	0.015	0.015	0.002	5	2012-14	0	Corrosion of household plumbing systems Erosion of natural deposits
---	-------	-------	-------	---	---------	---	--

PWS0220064 Well 1 - Dividing Ridge had a bad routine sample February 2015. Resample proved water to be in compliance. March & April 2015 *5 samples were taken each month to make sure water continued to be in compliance.

PWS#-0220065 District 2 -Clear Springs/Perry Liles Well

Contaminants:	MCLG or MRDLG	TT or MRDL	Your Water	Range Low/High	Sample Date	Violation	Typical Source

Young's Water & Sewer District, Inc.
2015 Consumer Confidence Report
PWS# 0220064 & 022065

Young's Water & Sewer District, Inc. met all State and U S Environmental Protection Agency (EPA) drinking water health standards during 2015. These standards help us keep your drinking water safe for use. Your drinking water comes from 2 deep wells drawing water from the Middle & Lower Wilcox Aquifers. The Source Water Assessment is in the office and on file for viewing. For more information contact the office at 662-628-1035.

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of contaminants. The presence of these do not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or human activity; microbial contaminants, such as viruses & bacteria that may come from sewage treatment plants, septic systems, agricultural livestock operations, & wildlife; inorganic contaminants, such as, salts and metals, can be natural occurring or results from urban storm water runoff, industrial, domestic wastewater discharges, oil and gas production, mining or farming; pesticides and herbicides, which may come from a variety of sources, such as agricultural, urban storm water runoff, and residential uses; Organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, septic systems; and Radioactive Contaminants, which can be naturally occurring or be the results of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons having cancer, persons undergoing chemotherapy, or organ recipients, persons with HIV/AIDS or other immune disorders, some elderly or infants particularly can be at risk from infections. These people should seek advice about drinking water from their Health Care Providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium & other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Additional Information on Lead in your Drinking Water If present, elevated levels of lead can cause serious problems, especially in pregnant women & young children. Lead in drinking water is primarily from materials found in materials & components associated with service lines and home plumbing. Young's W/S is responsible for providing high quality drinking water but cannot control the variety of material used in home plumbing components. When you water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may have your water tested. Information on lead in drinking water, testing methods, & steps you can take to minimize exposure is available from the Safe Drinking Hotline or <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Contact 601-576-7582 to have your water tested.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. The tables below list the contaminants detected in your drinking water in 2015. EPA and MSDOH require monitoring for certain contaminants less than once a year since concentration of these contaminants do not change frequently. The dates are noted.

Definition of units to help you better understand terms & abbreviations in tables

Action Level (AL) the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as reasonable using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG)The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDL) - The level of drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Treatment Technique (TT) - A required process to reduce the level of a contaminant in drinking water.

Not Applicable (NA) -

Not Detected (ND) -

Parts Per Billion (ppb) Parts per billion, or micrograms per liter (u/g)

Parts Per Million (ppm) - Parts per million, or milligrams per liter (ml/g)

Not Required (NR) - Monitoring not required but recommended.

re: 2015 CCR Information PWS- MS0220064 and MS0220065

Dear Water Supply,

Young's Water & Sewer District, Inc has 2 water systems. Everything runs through one office. Therefore we combine the two systems in our Consumer Confidence Report each year. Each system is listed separate for chemical, bacteriological, and violations..

We have filled out a separate information sheet for each system. The CCR contains both systems. This is easier & more economical to publish since all other information is the same for both wells.

Sincerely Yours,

Sidney L Parker, Pres.
Young's Water & Sewer District, Inc.
