CERTIFICATION

Consumer Confidence Report (CCR)

North Covington Water Association
Public Water Supply Name

016004

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper (attach copy of advertisement)
- On water bills (attach copy of bill)
- Email message (MUST Email the message to the address below)
- Other _____

Date(s) customers were informed: 5/3/17, / / , / /

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: _____ / /

CCR was distributed by Email (MUST Email MSDH a copy) Date Emailed: _____ / /

- As a URL (Provide URL _____)
- As an attachment
- As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: The News Commercial

Date Published: 5/3/17

CCR was posted in public places. *(Attach list of locations)* Date Posted: _____ / /

CCR was posted on a publicly accessible internet site at the following address (**DIRECT URL REQUIRED**):

CERTIFICATION

I hereby certify that the Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply

[Signature]
Name/Title (President, Mayor, Owner, etc.)

_____ Date

Submission options *(Select one method ONLY)*

Mail: (U.S. Postal Service)
MSDH, Bureau of Public Water Supply
P.O. Box 1700
Jackson, MS 39215

Fax: (601) 576 - 7800

Email: water.reports@msdh.ms.gov

CCR Deadline to MSDH & Customers by July 1, 2017!

2017 Annual Drinking Water Quality Report
 North Coyote Joint Water Association
 PWS# 0160004 & 0160017
 April 2017

We're pleased to present to you the year's Annual Quality Water Report. This report is designed to inform you about the quality of your water and to provide you with a clear and concise summary of the water quality monitoring program and program our water service. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible.

If you have any questions about the report or drinking water utility, please contact us. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible.

We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible.

We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible.

TEST RESULTS

Contaminant	Method	Units	Sample	Level Detected	Range of Samples	Unit Measurement	MCL	EWQ Source of Contamination
10. Barium	N	ppm	2017A	0.44	0.127 - 0.144	ppm	2	
11. Chromium	N	ppb	2017A	5	No Range	ppb	100	Discharge from metal refineries or erosion of natural deposits.
14. Copper	N	ppm	2017B17	1	0	ppm	1.3	Discharge from water piping in mills, erosion of pipe, or other sources.
17. Lead	N	ppb	2017B17	6	0	ppb	AL=15	Corrosion of lead in water piping systems, erosion of natural deposits, leaching from wood preservatives.
18. Nitrate (as Nitrogen)	N	ppm	2017B	57	No Range	ppm	AL=10	Corrosion of copper or plumbing systems, erosion of natural deposits.

Inorganic Contaminants

10. Barium: The highest level of barium detected in drinking water is 0.44 ppm. The highest level of barium allowed in drinking water is 2 ppm. Barium is a naturally occurring mineral. It is found in rocks and soil. It is also found in some minerals. Barium is used in many products, including paints, pigments, and fireworks. Barium is also used in medicine. Barium is toxic if swallowed. It can cause constipation and other problems. Barium is also used in many products, including paints, pigments, and fireworks. Barium is also used in medicine. Barium is toxic if swallowed. It can cause constipation and other problems. Barium is also used in many products, including paints, pigments, and fireworks. Barium is also used in medicine. Barium is toxic if swallowed. It can cause constipation and other problems.

11. Chromium: The highest level of chromium detected in drinking water is 5 ppb. The highest level of chromium allowed in drinking water is 100 ppb. Chromium is a naturally occurring element. It is found in rocks and soil. Chromium is used in many products, including stainless steel, chrome, and pigments. Chromium is also used in medicine. Chromium is toxic if swallowed. It can cause cancer and other problems. Chromium is also used in many products, including stainless steel, chrome, and pigments. Chromium is also used in medicine. Chromium is toxic if swallowed. It can cause cancer and other problems.

14. Copper: The highest level of copper detected in drinking water is 1 ppm. The highest level of copper allowed in drinking water is 1.3 ppm. Copper is a naturally occurring element. It is found in rocks and soil. Copper is used in many products, including pipes, wires, and coins. Copper is also used in medicine. Copper is toxic if swallowed. It can cause liver and kidney problems. Copper is also used in many products, including pipes, wires, and coins. Copper is also used in medicine. Copper is toxic if swallowed. It can cause liver and kidney problems.

17. Lead: The highest level of lead detected in drinking water is 6 ppb. The highest level of lead allowed in drinking water is 15 ppb. Lead is a naturally occurring element. It is found in rocks and soil. Lead is used in many products, including pipes, solder, and paint. Lead is also used in medicine. Lead is toxic if swallowed. It can cause brain and kidney problems. Lead is also used in many products, including pipes, solder, and paint. Lead is also used in medicine. Lead is toxic if swallowed. It can cause brain and kidney problems.

18. Nitrate (as Nitrogen): The highest level of nitrate detected in drinking water is 57 ppm. The highest level of nitrate allowed in drinking water is 10 ppm. Nitrate is a naturally occurring element. It is found in rocks and soil. Nitrate is used in many products, including fertilizers and explosives. Nitrate is also used in medicine. Nitrate is toxic if swallowed. It can cause cancer and other problems. Nitrate is also used in many products, including fertilizers and explosives. Nitrate is also used in medicine. Nitrate is toxic if swallowed. It can cause cancer and other problems.

Disinfection By-Products

Chlorine	N	2016	1.2	1-1.8	Mg/l	0	MDBP = 4	Water supply used for control
----------	---	------	-----	-------	------	---	----------	-------------------------------

PWS # 0160011

Contaminant	Violation Y/N	GIS Collected	Level Detected	Range of Digits or # of Samples Exceeding MGL/AQL	Unit Measurement	MCLB	MGL	Link Source of Contamination
Inorganic Contaminants								
10. Boron	N	2016	0.076	0.035 - 0.076	ppm	2	2	Discharge of filling vessel discharge from metal refineries, treated or untreated effluents
14. Copper	N	2016	1.3	0	ppm	1.3	A1=1.3	Corrosion of household plumbing systems, erosion of metal deposits, leaching from wood preservatives
15. Lead	N	2016	2	0	ppb	0	A1=16	Corrosion of household plumbing systems, erosion of metal deposits
19. Nitrate (as Nitrogen)	N	2016	.81	0.8 - .81	ppm	10	10	Runoff from fertilizer use, leaching from septic tanks, average erosion of natural deposits
Volatile Organic Contaminants								
76. Xylene	N	2016	.0007	NO Range	ppb	10	10	Discharge from petroleum facilities, discharge from applied gasoline
Disinfection By-Products								
Chlorine	N	2016	1.2	1-1.8	Mg/l	0	MDBP = 4	Water supply used for control

All measurements by sample registered for 2016.

As you can see in this table, all systems had no violations. While providing your drinking water, we monitor for violations of federal and state requirements. We have been successful in our monitoring and testing. If there are any violations, we will be notified by the EPA. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We do complete the monitoring requirements for the contaminants listed in the table. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from the aging infrastructure associated with lead pipes and lead solder. Our water system is responsible for providing high quality drinking water. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible.

Although drinking water is not a health risk, it is important to be aware of potential contamination by substances that are naturally occurring or man-made. These substances can be found in the water supply. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer, pregnant women, and infants can be particularly at risk from contaminants. These people should seek advice about drinking water from their health care providers. EPA/DEQ publishes a list of vulnerable populations. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible. We are committed to providing you with the highest quality water possible.

The North Carolina Water Assessment Program (NCWAP) is a public utility water quality survey. We ask that all our customers help us protect our water resources, which are the heart of our community, for the benefit of our children's future.
