CERTIFICATION

Consumer Confidence Report (CCR)

Northwest Kemper Water Assn.

Public Water Supply Name

0350003, 0350007, 0350023, 0350025

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper (attach copy of advertisement)
- On water bills (attach copy of bill)
- Email message (MUST Email the message to the address below)
- Other _____

Date(s) customers were informed: *5/4/17, 6/1/17, 7/3/17*

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: ___ / ___ / ___

CCR was distributed by Email (MUST Email MSDH a copy)

Date Emailed: ___ / ___ / ___

- As a URL (Provide URL _____)
- As an attachment
- As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: *Kemper County Messenger*

Date Published: *5/4/17*

CCR was posted in public places. *(Attach list of locations)*

Date Posted: ___ / ___ / ___

CCR was posted on a publicly accessible internet site at the following address (**DIRECT URL REQUIRED**):

CERTIFICATION

I hereby certify that the Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply

Wayne Smith Manager
Name/Title (President, Mayor, Owner, etc.)

2016 Annual Drinking Water Quality Report
 National Sanitation Foundation
 PWS# 350003, 350007, 350023, 350025
 April 2017

We're pleased to present to you this Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our customer goal is to provide you with a safe and dependable supply of drinking water. We want you to know that we are committed to providing you with information because informed customers are our best allies. Our water comes from both surface water from the Great Plains Aquifer.

The water quality assessment has been completed for our public water system to determine the overall acceptability of the drinking water supply to verify potential sources of contamination, or to determine if the water supply is safe for consumption. The water quality assessment has been completed for our public water system and is available for viewing upon request. The water for the Northwest Kemper Water Association has received lower ratings in terms of susceptibility to contamination.

If you have any questions about the report or concerning your water, please contact Water Service at 801.677.2525. We want our customers to be informed about their water utility. If you want to learn more, please join us at one of our regular customer meetings. They are held on the second Tuesday of August at 7:00 PM at the Main Office.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. The table below lists all the drinking water contaminants that have detected during the past year. The table includes the name of the contaminant, the unit of measurement, the maximum contaminant level (MCL) and the maximum contaminant level goal (MCLG). The MCL is the highest level of a contaminant that is allowed in drinking water. MCLGs are set to protect the health of the most vulnerable populations. The MCLG is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level Goal (MRDLG) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control infectious organisms.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reduce the risk of disinfectants in water disinfectant contaminants.

Parts per million (ppm) or Micrograms per liter (µg/L) - one part per million corresponds to one molecule in 2,000,000 parts or a single penny in \$10,000,000.

In the table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Ascorbic Acid - the concentration of a contaminant when a oxidized, oxygen treatment or other requirement within a water system must be added.

Maximum Contaminant Level (MCL) - The "Maximum Allowable" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set to protect the health of the most vulnerable populations.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level Goal (MRDLG) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control infectious organisms.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reduce the risk of disinfectants in water disinfectant contaminants.

Parts per million (ppm) or Micrograms per liter (µg/L) - one part per million corresponds to one molecule in 2,000,000 parts or a single penny in \$10,000,000.

PWS ID # 350003 - Preston
TEST RESULTS

Contaminant	Violation	Date Collected	Level Detected	Range of Detects or MCL/MCLG/MRDLG	Unit of Measure	MCL	MCLG	MCLG	State Source of Contamination
-------------	-----------	----------------	----------------	------------------------------------	-----------------	-----	------	------	-------------------------------

Inorganic Contaminants

10. Barium	N	2016	011	No Range	ppm	2	2	2	Discharge of drilling wastes; discharge from metal refineries; production of sugar alcohols
------------	---	------	-----	----------	-----	---	---	---	---

Organic Contaminants

11. Lead	N	2016	1	0	ppb	0	0	ALX18	Corrosion of lead-based plumbing systems; erosion of natural deposits; erosion of metal
13. Nitrate (as Nitrogen)	N	2016	98	No Range	ppm	10	10	10	Runoff from livestock feed; leaching from agricultural fields; discharge from animal waste

Disinfection By-Products

Chlorine	N	2016	13	3 - 13	mg/L	0	MRDL = 4	Water treatment used to control microbes
----------	---	------	----	--------	------	---	----------	--

02	THM5	N	2015	1	1-12	0	By-product of drinking water disinfection

Lead Record Sample - No sample required for 2015.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected. However, the EPA has determined that your water is SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a routine basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems compliance all monitoring equipment is inspected and complex systems of any monitoring sample prior to the end of the compliance period.

If recent, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water. We cannot control the variety of materials used in plumbing components in 2 meters before using water for several hours, you can minimize the potential for lead exposure by flushing your tap water for 30 seconds to 2 minutes before using water for drinking or cooking. If you use a leaded tap water, you can also use a certified water filter that is certified to reduce lead in drinking water. For more information on lead in drinking water, visit the U.S. Environmental Protection Agency's lead website at www.epa.gov/lead.

All systems of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can include inorganic or organic chemicals and pesticides associated. All drinking water, including bottled water, may naturally be contaminated with certain inorganic or organic chemicals and pesticides. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contamination in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, and people with kidney failure or other immune system deficiencies, some elderly, and infants can be particularly at risk of contracting an infection from drinking water. If you are in one of these categories, you should consult your health care provider for more information. For more information on immunocompromised persons, visit the U.S. Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

The Northwest Kynard Water Association has about 1,800 meters and over 180 miles of pipe providing clean, safe water to over 4,500 residents in parts of 6 counties in central Mississippi. The Northwest Kynard Water Association is committed to providing the highest treatable water from the Mississippi Delta. We are committed to providing the highest treatable water from the Mississippi Delta. We are committed to providing the highest treatable water from the Mississippi Delta.

Please Note: You may obtain a copy of this report at our office at 10798 HWY 307 in Preston or call us at 601-577-5008.

2016 Annual Drinking Water Quality Report
 Northwest Kemper Water Association
 PWS#: 350003, 350007, 350023, 350025
 April 2017

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies. Our water source is from wells drawing from the Lower Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Northwest Kemper Water Association have received lower rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Wayne Smith at 601.677.3558. We want our valued customers to be informed about their water utility. If you want to learn more, please join us at any of our regularly scheduled meetings. They are held on the second Tuesday of August at 7:00 PM at the Main Office.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2016. In cases where monitoring wasn't required in 2016, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

* Most recent sample. No sample required for 2016.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some constituents have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Northwest Kemper Water Association has almost 1,800 meters and over 650 miles of pipe providing clean, fresh water to over 4,600 residents in parts of 5 counties in east central Mississippi. Our commitment to service is evidenced by receiving the highest available rating from the Mississippi State Department of Health during our annual inspections.

Please Note: You may obtain a copy of this report at our office at 10798 HWY 397 in Preston or call us at 601.677.3558.
