CERTIFICATION

Consumer Confidence Report (CCR)

CITY OF LELAND

Public Water Supply Name

0760006

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper (attach copy of advertisement)
- On water bills (attach copy of bill)
- Email message (MUST Email the message to the address below)
- Other HAND DELIVERED TO EACH HOUSEHOLD

Date(s) customers were informed: 06 / 22 / 17 - 07 / 06 / 17 /

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: / /

CCR was distributed by Email (MUST Email MSDH a copy)

Date Emailed: / /

- As a URL (Provide URL _____)
- As an attachment
- As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: THE LELAND PROGRESS

Date Published: 06 / 22 / 17 - 07 / 06 / 17

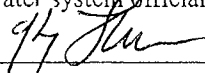

CCR was posted in public places. *(Attach list of locations)*

Date Posted: / /

CCR was posted on a publicly accessible internet site at the following address (**DIRECT URL REQUIRED**):

CERTIFICATION

I hereby certify that the Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply

Name/Title (President, Mayor, Owner, etc.)

06/19/2017

Date

Submission options *(Select one method ONLY)*

Mail: (U.S. Postal Service)
MSDH, Bureau of Public Water Supply
P.O. Box 1700
Jackson, MS 39215

Fax: (601) 576 - 7800

Email: water.reports@msdh.ms.gov

CCR Deadline to MSDH & Customers by July 1, 2017!

STATE OF MISSISSIPPI
COUNTY OF WASHINGTON

Personally appeared before me, the undersigned Notary Public, Stephanie D. Patton, Editor and Publisher of The Leland Progress, LLC, a newspaper qualified to carry legal notices printed and published in the City of Leland, said State and County, and having a general circulation therein, who makes oath that a certain legal notice, of which a true copy clipped from The Leland Progress, LLC 2 consecutive times on the days and dates as follows, to-wit:

Thursday, the 22 day of June, 2017

Thursday, the 6 day of July, 2017

Thursday, the _____ day of _____, _____

Thursday, the _____ day of _____, _____

Thursday, the _____ day of _____, _____

Stephanie Patton

Editor & Publisher
The Leland Progress, LLC

Sworn to before me, this 5th day of July, 2017.

Deborah Lamberson
Notary Public

My commission expires _____

Fee for publishing and holding proofs: \$ 200.00

Type of Legal Notice/Name: _____

Attorney: _____

2016 Annual Drinking Water Quality Report
 City of Leland
 PWS#: 0760006
 May 2017

2017 MAY 23 PM 1:38

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Cockfield Formation Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the City of Leland have received lower susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Lonzo Miller at 662-686-4136. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of each month at 5:00 PM at the City Hall.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2016. In cases where monitoring wasn't required in 2016, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Radioactive Contaminants								
5. Gross Alpha	N	2013*	.7	No Range	pCi/L	0	15	Erosion of natural deposits
Inorganic Contaminants								
10. Barium	N	2016	.1315	.1256 - .1315	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
14. Copper	N	2014/16	.2	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

16. Fluoride**	N	2016	.319	.305 - .319	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2014/16	11	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits

Disinfection By-Products

81. HAA5	N	2016	13	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2016	43.6	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2016	.70	.40 – 1.26	mg/l	0	MDRL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2016. ** Fluoride level is routinely adjusted to the MS State Dept of Health's recommended level of 0.7 - 1.3 mg/l.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

Monitoring and Reporting of Compliance Data Violations:

During a sanitary survey conducted on 8/19/2010, the Mississippi State Department of Health cited the following significant deficiency(s):
Unprotected Cross Connections

Corrective Actions: MSDH is currently working with this system to return them to compliance since the expiration of the compliance deadline. We anticipate the system being returned to compliance by 6/30/2017.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", the CITY OF LELAND is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year in which average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 0. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 0%.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The City of Leland works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future. Notice: This (Consumer Confidence) report will not be mailed to each customer.

2016 Annual Drinking Water Quality Report
 City of Laurel
 PWS# 0790006
 May 2017

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality of water and services we deliver to you. We've worked hard to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the quality of our water. Our water source is from wells flowing from the Occochee Formation Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility assessment was completed has been furnished to our public water system and is available for viewing upon request. The wells for the City of Laurel have received over 500,000 gallons of water since the assessment.

If you have any questions about this report or concerning your water utility, please contact Lurza Miller at 602-885-4136. We want our valued customers to be informed about their water. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of each month at 6:30 PM at the City Hall.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2016. In cases where monitoring was not required in 2016, the table reflects the most recent results. As water travels over the surface of land or underground, it absorbs naturally occurring contaminants. In some cases, industry materials and can pick up substances or contaminants from the presence of animals (or from human activities, such as swimming pools, hot tubs, spas, and hot water heaters) that may come from sewage treatment plants, septic systems, agricultural fertilizers, pesticides, and other sources. Some of these contaminants, such as arsenic and bacteria, that may come from natural sources, such as rocks and soil, can be naturally occurring or result from urban storm-water runoff. Other contaminants, such as lead, copper, iron, manganese, and radon, can be naturally occurring or result from urban storm-water runoff. Some of these contaminants, such as arsenic, radon, and lead, can be naturally occurring or result from urban storm-water runoff. Some of these contaminants, such as arsenic, radon, and lead, can be naturally occurring or result from urban storm-water runoff.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowable" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The Goal (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Micrograms per liter (µg/L) - one part per million corresponds to one ounce in two years of a single penny in \$10,000,000. Parts per billion (ppb) or Micrograms per liter (µg/L) - one part per billion corresponds to one ounce in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS

Contaminant	Modern Y/N	Date Collected	Level Detected	Range of Values Exceeding MCL/MCLG	Unit	MCLG	MCL	Likely Source of Contamination
Radioactive Contaminants								
5. Gross Alpha	N	2016	7	No Range	µCi/L	0	15	Erosion of natural deposits
Inorganic Contaminants								
10. Boron	N	2016	1316	1296 - 1315	ppm	2	2	Discharge of drilling water, discharge from metal refineries, erosion of natural deposits
14. Copper	N	2014/16	2	0	ppm	1.3	1.3	Corrosion of household plumbing systems, erosion of natural deposits, erosion from wood preservatives
16. Fluoride	N	2016	318	306 - 319	ppm	4	4	Erosion of natural deposits, water softening systems, erosion from fertilizers and aluminum
17. Lead	N	2014/16	11	0	ppb	0	15	Corrosion of household plumbing systems, erosion of natural deposits

Disinfection By-Products

Contaminant	Modern Y/N	Date Collected	Level Detected	Range of Values Exceeding MCL/MCLG	Unit	MCLG	MCL	Likely Source of Contamination
81. THMs	N	2016	13	No Range	ppb	0	80	By-product of drinking water disinfection
82. Trihalomethanes	N	2016	43.6	No Range	ppb	0	80	By-product of drinking water disinfection
83. Haloacetic Acids	N	2016	70	40 - 128	µg/L	0	MDRL = 4	Water additives used to control microbes

*Water meter sample. No sample required for 2016. **Furandiol is routinely detected in the MS State Dept of Health's recommended level of 0.7-1.3 mg/L. We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets standards. In an effort to ensure systems comply all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When you use tap water for drinking or cooking, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing your water, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at www.epa.gov/lead. For more information, contact the Mississippi State Department of Health Public Health Laboratory, which has lead testing. Please contact 601-576-7582, 9:30 AM to 5:00 PM to have your water tested.

... and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:
