TITLE V MATERNAL & CHILD HEALTH SERVICES BLOCK GRANT
STATE PROFILE FOR FY 2015
[Sec. 506(a)(1)]
STATE: MS

1. State MCH Administration:
(max 2500 characters)

The Mississippi State Department of Health (MSDH) is the state agency responsible for administering the Title V program in Mississippi. Maternal and Child Health (MCH) Block Grant funds are allocated in the MSDH central office to the Offices of Women's Health and Child/Adolescent Health, both of which are located organizationally within Health Services (HS), which is responsible for all maternal and child health functions. The Children's Medical Program (CMP) is the program of services for Children with Special Health Care Needs, and is located within the Office of Child/Adolescent Health. The Offices of Women's Health and Child/Adolescent Health provide services for the three major populations targeted by the MCH Block Grant - pregnant women, mothers, and infants; children; and children with special health care needs. Health Services is also responsible for administering the statewide Family Planning program and the Women, Infants, and Children (WIC) Supplemental Food Program.

11. Statewide Initiatives and Partnerships:

a. Direct Medical Care and Enabling Services:
(max 2500 characters)

MSDH Newborn Screening Program – Mississippi has one of the most comprehensive newborn screening programs in the nation. State law requires that all babies born in Mississippi be tested for forty genetic disorders. Early detection of genetic disorders allows for treatment (direct medical care) to prevent permanent damage in the infant and the opportunity to lead a normal life. MSDH Children's Medical Program (CMP) – CMP is the state's Children with Special Health Care Needs (CSHCN) program and provides medical and surgical care to children with chronic or disabling conditions through the provision of equipment and drugs, and arrangement for physical, occupational and other therapies. The CMP collaborates with primary care physician groups to assure the availability of medical homes and uses public health district CSHCN coordinators to assist with care coordination at the local level (enabling services).

b. Population-Based Services:
(max 2500 characters)

MSDH Family Planning Program – The Adolescent Health Coordinator collaborates with internal and external partners to address teen pregnancy and adolescent sexual and reproductive health issues. The MSDH Office of Child and Adolescent Health Program works closely with the Division of Family Planning to implement strategies, policies and services that reduce the rate of repeat births to adolescent mothers less than 17 years old; to reduce the rate of adolescents at risk of early sexual initiation, teen pregnancy and teen parenthood; and to increase the rate of adolescents receiving comprehensive sexual health education in middle and high schools.

c. Infrastructure Building Services:
(max 2500 characters)

The Office of Health Data and Research (OHDR) is housed within Health Services of the MSDH and provides data, analysis, research, surveillance, support, and management of assessment-related activities for Health Services with emphasis on maternal and child health (MCH). The OHDR is staffed by research biostatisticians, epidemiologists, program specialists, and other support staff who conduct surveillance programs and analyze data for the various Health Services programs and systems including Asthma, Pregnancy Risk Assessment Monitoring System (PRAMS), Tobacco, and the Youth Risk Behavior Surveillance System (YRBSS). The OHDR also compiles chronic disease reports and data profiles, and coordinates the Title V MCH Block Grant and the State Systems Development Initiative (SSDI).

Column Name:

Year: 2013

Field Note:

For 2011-2015, indicator data come from the National Survey of Children with Special Health Care Needs (CSHCN), conducted by the U.S. Health Resources and Services Administration and the U.S. Centers for Disease Control and Prevention in 2009-2010. This survey was first conducted in 2001. The same questions were used to generate this indicator for both the 2001 and the 2005-06 CSHCN survey. However, in 2009-2010 there were wording changes and additions to the questions used to generate this indicator. The data for 2009-2010 are NOT comparable to earlier versions of the survey.

All estimates from the National Survey of CSHCN are subject to sampling variability, as well as survey design flaws, respondent classification and reporting errors, and data processing mistakes.

Note for report of 2012 data: For 2011-2014, indicator data comes from the National Survey of Children with Special Health Care Needs (CSHCN), conducted by the U.S. Health Resources and Services Administration and the U.S. Centers for Disease Control and Prevention in 2009-2010. This survey was first conducted in 2001. The same questions were used to generate this indicator for both the 2001 and the 2005-06 CSHCN survey. The National CSHCN Survey collects data using the SLAITS mechanism. SLAITS is not an ongoing survey, is not conducted at regular intervals and was last administered in 2009/10 (CDC SLAITS website). National performance objectives for this indicator remain the same during time periods between administration of the survey and will be modified for future years based on the timing of the administration of the next CSHCN Survey.

Compared to the 2001 CSHCN survey, there were revisions to the wording, order, and number of questions used to generate this indicator for the 2005-06 CSHCN survey. The questions were also revised extensively for the 2009-2010 CSHCN survey. Therefore, many parts of the three surveys are not comparable.

All estimates from the National Survey of CSHCN are subject to sampling variability, as well as survey design flaws, respondent classification and reporting errors, and data processing mistakes.

2011:

For 2011-2014, indicator data comes from the National Survey of Children with Special Health Care Needs (CSHCN), conducted by the U.S. Health Resources and Services Administration and the U.S. Centers for Disease Control and Prevention in 2009-2010. Compared to the 2001 CSHCN survey, there were revisions to the wording, order, and number of questions used to generate this indicator for the 2005-06 CSHCN survey. The questions were also revised extensively for the 2009-2010 CSHCN survey. Therefore, many parts of the three surveys are not comparable.

All estimates from the National Survey of CSHCN are subject to sampling variability, as well as survey design flaws, respondent classification and reporting errors, and data processing mistakes.

PERFORMANCE MEASURE # 04

The percent of children with special health care needs age 0 to 18 whose families have adequate private and/or public insurance to pay for the services they need. (CSHCN Survey)

There were also issues around the reliability of the 2001 data because of the sample size. The data for the 2 surveys are not comparable for NPM6, and findings from the 2005-06 survey may be considered baseline data. However, the same questions were used to generate the NPM6 indicator for the 2009-2010 survey. Therefore, the 2005-2006 and 2009-2010 surveys can be compared.

2013: Mississippi immunization rate (4:3:1:3:3) for children 19-35 months of age is 79.3%. The data is retrieved from the National Immunization Survey (NIS). The NIS is sponsored by the Centers for Disease Control and Prevention (CDC). The study collects data by interviewing households in all 50 States, the District of Columbia, and selected large urban areas. The interviews are conducted by telephone with households selected by random chance. The target population for the NIS is children between the ages of 19 and 35 months living in the United States at the time of the interview. Data from the NIS are used to produce timely estimates of vaccination coverage rates for all childhood vaccinations recommended by the Advisory Committee on Immunization Practices (ACIP).

Note for report of 2011 data: The current percentage shows a large increase for the performance measure. A review of WIC data revealed contract ITS analyses included duplicates that artificially inflated (even possibly doubled) the measure's denominator in past years. As a result, previous estimates were much lower than the actual prevalence. These errors have been corrected and a standard algorithm will be used for future reports.

LIST OF MCH PRIORITY NEEDS

[Sec. 505(a)(5)]

STATE: MS FY: 2015

Your State's 5-year Needs Assessment should identify the need for preventive and primary care services for pregnant women, mothers, and infants; preventive and primary care services for children and services for Children with Special Health Care Needs. With each year's Block Grant application, provide a list (whether or not the priority needs change) of the top maternal and child health needs in your state. Using simple sentence or phrase, list below your State's needs. Examples of such statements are: "To reduce the barriers to the delivery of care for pregnant women, " and "The infant mortality rate for minorities should be reduced."

MCHB will capture annually every State's top 7 to 10 priority needs in an information system for comparison, tracking, and reporting purposes; you must list at least 7 and no more than 10. Note that the numbers listed below are for computer tracking only and are not meant to indicate priority order. If your State wishes to report more than 10 priority needs, list additional priority needs in a note at the form level.

1. To reduce the occurrence of very low birth weight deliveries and to reduce the occurrence of preterm or small-for gestational-age deliveries.
2. To increase preconception care and interconception care.
3. To reduce the rate of teen pregnancy among female adolescents aged 15-19 years.
4. To reduce adolescent and childhood overweight and obesity.
5. To reduce tobacco use among adolescents and to reduce adolescent use of alcohol and illegal drugs.
6. To reduce the rate of sexually transmitted disease.
7. To increase adult immunizations.

SIGNIFICANCE

Previous negative birth outcome is a predictor of risk for negative birth outcomes in subsequent pregnancies.

SP() #

PERFORMANCE MEASURE:

The percent of women whose live birth occurred less than 24 months after a prior birth.

STATUS:

Active

GOAL

To encourage women to space their pregnancies at intervals of lower risk for adverse perinatal outcomes.

DEFINITION

The percent of women whose live birth occurred less than 24 months after a prior birth.

Numerator:

Number of women with a live birth in the current year that occurred within 24 months of a previous live birth.

Denominator:

Number of multiparous women with a live birth in the current year.

Units: 100 **Text:** Percent

HEALTHY PEOPLE 2020 OBJECTIVE

HP 2010 Objective 9.2

Reduce the proportion of births occurring within 24 months of a previous birth.

Related to HP 2020 FP 5

Reduce the proportion of pregnancies conceived within 18 months of a previous birth.

DATA SOURCES AND DATA ISSUES

Source: Mississippi State Department of Health Office of Vital Records/Statistics Issues: Women with birth intervals of less than five months are excluded from the analysis.

SIGNIFICANCE

A pregnancy interval (the time between a live birth and subsequent conception) of less than 18 months is associated with increased risk of poor perinatal outcomes including preterm rupture of membranes, preterm birth, neonatal death and poor maternal outcomes including preeclampsia, when compared to longer intervals. Given the methodologic difficulty of obtaining population-based measures of conception, monitoring birth intervals (the time elapsed between an index birth and the previous birth) provides the most reliable estimate of pregnancy spacing. Birth intervals of at least 24 months ensure that mothers have not become pregnant during their child's first year of life and allow for adequate interconception time to address existing physical and social risk factors and to encourage protective factors that promote maternal and infant health and reduce the risk of morbidities and mortality in the subsequent pregnancy.

HEALTH SYSTEMS CAPACITY #01

The rate of children hospitalized for asthma (ICD-9 Codes: 493.0 -493.9) per 10,000 children less than five years of age.

	<u>Annual Indicator Data</u>				
	2009	2010	2011	2012	2013
Annual Indicator	23.1	30.4	35.4	36.5	36.5
Numerator	512	632	706	736	736
Denominator	221,400	208,116	199,301	201,789	201,789

Check this box if you cannot report the numerator because
 1. There are fewer than 5 events over the last year, and
 2. The average number of events over the last 3 years is fewer than 5 and therefore a 3-year moving average cannot be applied.

Year: 2011

Field Note:

Note for report of 2011 data: The denominator used to calculate this rate is adjusted from the actual 2010 statewide population estimate (210,678) of children below 5 years of age. The adjustment accounted for hospitals representing 94.6% of acute beds in MS. The estimated denominator is calculated on the percentage of hospitals in the state accounted for in the reported data. Hospitals reporting data used in this calculation accounts for 94.6% of all acute care hospital beds in Mississippi. Therefore, the population estimate for children under 5 years of age was adjusted by 94.6% (210,678 x .94 = 199,301).

HEALTH SYSTEMS CAPACITY #02

The percent Medicaid enrollees whose age is less than one year during the reporting year who received at least one initial periodic screen.
