

Mississippi Immunization Information Exchange (MIIX)

# **Quick Reference Guide**

## **Verify MyIR**

## Verify MyIR Permission

The **Verify MyIR Permission** allows authorized users to connect MyIR Mobile users to their immunization records.

- The permission enables users to send the SIIS ID, date of birth, name and email address to MyIR Mobile through an API that connects MyIR Mobile users to their immunization records.
- The email address that the user created their MyIR Mobile account with is required to be on the patient demographic page.

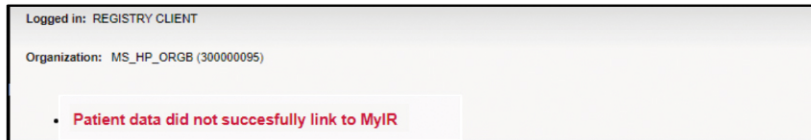

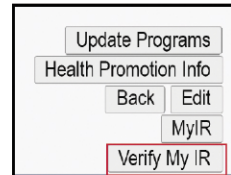

## Creating a Successful Match

If there is a MyIR Mobile user who has created an account and was not able to successfully match, follow these steps:

1. **Log in** to MIIX.
2. Click **Patient > Search/Add**
3. **Search** for the patient and select the patient.
4. **Confirm** that the email address listed on the patient demographics page is the same email address that the patient used to register for MyIR Mobile.

Facilities	Primary Address		
Physicians & Vaccinators	Address 1:	411 S 1ST ST	Address 2
Lot Numbers	City:	PHOENIX	State: AZ
Orders/Transfers	Zip Code:	85004	
Pandemic Forms	Email:	RACHEKJONES@NAIALINAT.COM	
	Country:	United States	Connty/Parish: MARICOPA
	Patient Phone Number(s)		

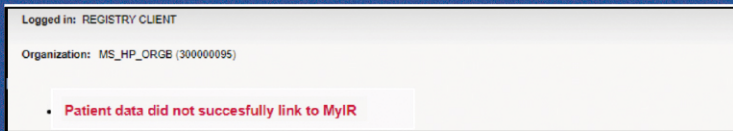

- At the bottom right hand of the patient demographics page, click **Verify MyIR**.
- A link is established in MyIR Mobile.

- Inform** the MyIR Mobile user that their account has been updated successfully and **ask** them to log back into their MyIR Mobile account.
- The patient can now access their immunization needs, immunization history and documents. No next steps are needed.

## Unsuccessful Match

- If you click the **Verify MyIR** with no email address listed on the patient **demographics page**, it will not find a match.
- If the user has an email address listed but did not register with it, a match will not be found.
- If the user has **not** created a MyIR Mobile account, it will not find a match.

## Next Steps

If the user is unable to be linked, attempt the following:

- **Update** the email address on the patient demographic page, then attempt the workflow again.
- Ensure the user has created a MyIR account, if not, direct them to create an account.
