¹ Other mosquito-borne illnesses include La Crosse encephalitis, St. Louis encephalitis, Eastern Equine encephalitis, Malaria, and Dengue.

² Mosquitoes are trapped and tested for West Nile virus in selected counties where a higher number of human cases have occurred in previous years. WNV-positive mosquitoes indicate that WNV is circulating in the state, and that all residents, regardless of location, should take precautions.

³ Infected blood donors are identified through routine screening to ensure the safety of transfusion products. WNV-positive blood donors who are symptomatic are included in the WNV human case count.

Human case count represents only those confirmed by laboratory testing.
Malaria and Dengue cases are travel related, unless otherwise noted. Humans as well as horses can be infected with mosquito-borne illnesses, and infected horses indicate that humans may also be at risk.
