

Block I – EMT Refresher Description

Block I provides a comprehensive review of foundational EMT knowledge and patient assessment skills. Instruction includes EMS systems and operations, medical terminology, scene size-up, primary and secondary assessment, airway management, respiratory anatomy and physiology, oxygen administration, ventilation, airway adjuncts, and recognition and management of common respiratory emergencies. Emphasis is placed on identifying and managing immediate life threats, establishing treatment priorities, applying appropriate BLS interventions, and preparing students for National Registry-level patient assessment and clinical decision-making.
