MISSISSIPPI STATE DEPARTMENT OF HEALTH BUREAU OF PUBLIC WATER SUPPLY CCR CERTIFICATION CALENDAR YEAR 2014 CITY OF SHELBY

Public Water Supply Nam	e
006001	
List PWS ID #s for all Community Water System	ns included in this CCR
The Federal Safe Drinking Water Act (SDWA) requires each Community Consumer Confidence Report (CCR) to its customers each year. Depend system, this CCR must be mailed or delivered to the customers, published in customers upon request. Make sure you follow the proper procedures whemail a copy of the CCR and Certification to MSDH. Please check all both the customers are considered as a copy of the CCR and Certification to MSDH.	public water system to develop and distribute a ling on the population served by the public water a newspaper of local circulation, or provided to the en distributing the CCR. You must mail, fax or exes that apply.
Customers were informed of availability of CCR by: (Attach cop	oy of publication, water bill or other)
☐ Advertisement in local paper (attach copy of ☐ On water bills (attach copy of bill) ☐ Email message (MUST Émail the message to ☐ Other	o the address below)
Date(s) customers were informed:/ _ ,/ _/	
CCR was distributed by U.S. Postal Service or other direct methods used	delivery. Must specify other direct delivery
Date Mailed/Distributed://	
CCR was distributed by Email (MUST Email MSDH a copy) As a URL (Provide URL As an attachment As text within the body of the email message	
CCR was published in local newspaper. (Attach copy of published	ed CCR or proof of publication)
Name of Newspaper: THE BOLIVAR COMMERICAL	
Date Published: 06 / 19 / 15	
CCR was posted in public places. (Attach list of locations)	
CCR was posted on a publicly accessible internet site at the follo	owing address (<u>DIRECT URL REQUIRED</u>):
CERTIFICATION I hereby certify that the 2014 Consumer Confidence Report (CCR) public water system in the form and manner identified above and the SDWA. I further certify that the information included in this C the water quality monitoring data provided to the public water Department of Health, Bureau of Public Water Supply. MAYOR Name/Title (President, Mayor, Owner, etc.)	that I used distribution methods allowed by CR is true and correct and is consistent with
Bureau of Public Water Supply	May be faxed to: (601)576-7800
	May be emailed to: water.reports@msdh.ms.gov

City of Shelby 2014 Annual Drinking Water Quality Report

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

Our water comes from three deep wells located in the meriden-upper wilcox aquifer.

Source water assessment and its availability

our wells were ranked lower in terms of susceptibility to contamination. This report is available for review at our office.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791).

The sources of drinking water (both tap water and bottled water) include rivers, lakes ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban stormwater

such as salts and metals, which can be naturally occurring or result from uroan social such as the salts and metals, which can be naturally occurring or feature, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic Chemicals Couttaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved?

Please join us for our monthly meeting on the first Tucsday of each month at the Shelby City Hall. The meeting begins at 7:00 p.m. If you have any questions about this report, please contact Moses Riley at 662.347.3064. The Consumer Confidence Report will not be mailed to water customers. The report will be posted at city hall for review.

Description of Water Treatment Process

Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisms that may be in the water. Disinfection is considered to be one of the major public health advances of the 20th century.

ater Conservation Tips

Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference – try one today and soon it will

- Take short showers a 5 minute shower uses 4 to 5 gallons of water compared to up to 50 Take short showers - a 5 minute shower uses 4 to 5 gallons of water compared to up to 50 gallons for a bath.

 Shut off water while brushing your teeth, washing your hair and shaving and save up to 500 gallons a month.

 Use a water-efficient showerhead. They're inexpensive, easy to install, and can save you up to 750 gallons a month.

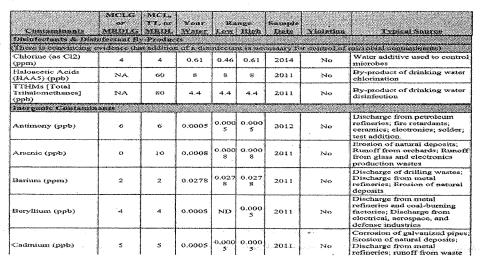

- Run your clothes washer and dishwasher only when they are full. You can save up to 1,000 gallons a month.
- 1,000 gailons a month.

 Water plants only when necessary.

 Fix leaky toilets and faucets. Faucet washers are inexpensive and take only a few minutes to replace. To check your toilet for a leak, place a few drops of food coloring in the tank and wait. If it seeps into the toilet bowl without flushing, you have a leak.

 Fixing it or replacing it with a new, more efficient model can save up to 1,000 gallons a
- Adjust sprinklers so only your lawn is watered. Apply water only as fast as the soil can

occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

(ppb)	600	600	0.5	0.5	0.5	2011	11	iv [cl	nemical factories
p-Dichlorobenzene (ppb)	75	75	0.5	0.5	0.5	2011	Ν	lo ch	ischarge from industrial remical factories
cis-1,2- Dichloroethylene (ppb)	70	70	0.5	0.5	0.5	2011	r		ischarge from industrial nemical factories

Inorganic Contember	s sie Pry								4
Copper - action tevel at consumer taps (ppm)	1.3	1.3	0.4	20	14	o		No	Corresion of household plumbing systems; Erosion of natural deposits
Lead - action level at consumer taps (ppb)	0	15	2	20	14	0		No	Corrosion of household plumbing systems; Erosion of natural deposits

Falt Beherspliens					
Term	Definition				
ppm	ppm: parts per million, or milligrams per liter (mg/L)				
dad	ppb: parts per billion, or micrograms per liter (µg/L)				
NA NA	NA: not applicable				
ND ND	ND: Not detected				
NR	NR: Monitoring not required, but recommended.				

Important Definiting Water Definitions	Definition
MCLG	MCLO: Maximum Contaminant Ceret Ocal: The level of a contaminant in drinking water below which there is no known or expected visit to health. MCLOs allow for a margin of eafery.
NC L	MCT. Maximum Contaminant Level: The highest level of a centuralisant that is allowed in drinking water. MCLs are set as close to the MCLOs see Touchtis using the best evaluable treatment reshinglegy.
TT	TT: Transferent Technique: A required precess intended to reduce the level of a contaminant in drinking water.
	AL: Action Level: The concentration of a contaminant which, if exceeded, briggers treatment or other requirements which a water system must follow:
Variouspapa meeti Espermaputterem	Veriances and Econophera: State or EPA permission not to meet an MCL.
MRDLO	Adultation Magirnum residual distribution level year. The level of a drinking water distributant below whon there is all screws or expensed risk to leasth. MRDLCs do not reflect the benefits of the use of the distributions to compare microbial contaminants.
MRDU	MROL. Maximum residend distribution level. The highest level of a distribution allowed in drinking water. There is convincing evidence that addition, of a distribution is necessary for control of microbial volume transfer and the control of microbial volume.
MNR	MNR: Monitored Not Regulated
MPL	MPL: State Assigned Maximum Permissible Level
