Lincoln Rural WIA Zetac

Public Water Supply Name

430032

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper (attach copy of advertisement)
- On water bills (attach copy of bill)
- Email message (MUST Email the message to the address below)
- Other _____

Date(s) customers were informed: ___/___/___, ___/___/___, ___/___/___

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: ___/___/___

CCR was distributed by Email (MUST Email MSDH a copy) Date Emailed: ___/___/___
 As a URL (Provide URL _____)
 As an attachment
 As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: Daily Leader

Date Published: 6/15/15

CCR was posted in public places. *(Attach list of locations)* Date Posted: 6/24/15

CCR was posted on a publicly accessible internet site at the following address (**DIRECT URL REQUIRED**):

@ Office

CERTIFICATION

I hereby certify that the 2014 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

**REPORT
LINCOLN RURAL WATER ASSOCIATION
ZETUS PWS ID# 430032**

June 1, 2015

Lincoln Rural Water is pleased to present to you, this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source consists of two wells pumping from the Miocene Aquifer.

We are pleased to report that our drinking water meets all federal and state requirements. If you have any questions about this report or concerning your water utility, please contact our office at 1536 Monticello Street, Brookhaven, MS. 39601, 601-833-6449. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the 3rd Tuesday of each month at the above location at 7:00 P.M. and our annual meeting is held on the 2nd Monday of March at the Lincoln County Courthouse at 7:00 P.M.

The source water assessment has been completed for our public water system to determine the Overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detail information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for Lincoln Rural Water have received a moderate and lower ranking in terms of susceptibility to contamination.

Lincoln Rural Water Association routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1st to December 31st, 2014. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-425-4791.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a Water system must follow.

Maximum Contaminant Level - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - The "Goal (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Addition information for Lead

If present elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. ABC Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/sagewater/lead>.

The Mississippi State Department of Health Laboratory offers lead testing for \$20.00 per sample. Please contact 601.576.7582 if you wish to have your water tested.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791). Please call our office if you have questions.

We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

TEST RESULTS

#0430032 Zetus

Contaminants	MCLG or MRDL G	MCL, TT, or MRDL	Your Water	Range		Sample Date	Violation	Typical Source
				Lo w	High			
Disinfectants & Disinfection By-Products								
(There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.)								
Chlorine (as Cl ₂) (ppm)	4	4	1.20	.90	1.50	2014	No	Water additive used to control microbes
TTHMS (Total Trihalomethanes)(ppb)	NA	80	8.16			2009	No	By-product of drinking water disinfection
Barium (ppm)	2	2	.0032	NA		2012	No	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Chromium (ppb)	100	100	.00164	NA		2012	No	Discharge from steel and pulp mills; Erosion of natural deposits
Fluoride (ppm)	4	4	.151	NA		2012	No	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
Nitrate [measured as Nitrogen] (ppm)	10	10	.02	NA		2013	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
Nitrite [measured as Nitrogen] (ppm)	1	1	0.02	NA		2013	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
Inorganic Contaminants	MCLG	AL	Your Sample	#Samples	Exceed	Typical Source		
			Water	Date	Exceeding AI	AI		
Copper - action level at consumer taps (ppm)	1.3	1.3	0.1	2013	10	No	Corrosion of household plumbing systems; Erosion of natural deposits	
Lead - action level at consumer taps (ppb)	0	0.15	0.003	2013	10	No	Corrosion of household plumbing systems; Erosion of natural deposits	

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential source of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request.

The wells for the Lincoln Rural Water association have received lower rankings in terms of susceptibility to contamination.

Lincoln Rural Water is pleased to present you our 10th Annual Water Quality Report. This report is designed to inform you about the quality of water you receive in your area. One concern you may have is the safety and dependability of drinking water. We want you to understand the effort we make to ensure the water treatment process and protect the water resources. We are committed to ensuring the quality of your water. Our water comes from the Lincoln Rural Water Association. Lincoln Rural Water is pleased to report that our drinking water meets all federal and state requirements. The following report shows our water quality and a list of items.

If you have any questions about this report or concerning our water utility, please contact our office at 1316 Main Street, Brimley, MI, 49813-4149. We want our valued customers to be informed about their water utility. If you want to know more, please visit our website at www.lincolnruralwater.com. They are listed on the 2nd Monday of each month at 7:00 PM. Lincoln Rural Water Association is listed on the 2nd Monday of each month at 7:00 PM. Lincoln Rural Water Association is listed on the 2nd Monday of each month at 7:00 PM.

The source water assessment has been completed for our public water system to determine the overall susceptibility of the drinking water supply to naturally occurring sources of contamination. A report containing detailed information on how the vulnerability assessment was conducted has been furnished to our public water system and is available for viewing upon request. The results of this assessment are available on our website at www.lincolnruralwater.com.

Lincoln Rural Water Association is pleased to announce for as many as 134 communities in the drinking water receiving 100% of their water supply from Lincoln Rural Water. A report containing detailed information on how the vulnerability assessment was conducted has been furnished to our public water system and is available for viewing upon request. The results of this assessment are available on our website at www.lincolnruralwater.com.

To this date you've had many tests and analyses you might not be familiar with. To help you better understand these tests we've provided the following definitions:

Active Level - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Maximum Contaminant Level - The "Maximum Allowable" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set to protect public health. MCLs are based on the best available science to protect public health and are set at a level that is as low as is feasible.

Additional Information for Lead
If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and pipes associated with service lines, home plumbing, and lead solder. Lead in drinking water is primarily from materials and pipes associated with service lines, home plumbing, and lead solder. Lead in drinking water is primarily from materials and pipes associated with service lines, home plumbing, and lead solder. Lead in drinking water is primarily from materials and pipes associated with service lines, home plumbing, and lead solder.

The source water assessment has been completed for our public water system to determine the overall susceptibility of the drinking water supply to naturally occurring sources of contamination. A report containing detailed information on how the vulnerability assessment was conducted has been furnished to our public water system and is available for viewing upon request. The results of this assessment are available on our website at www.lincolnruralwater.com.
