

MISSISSIPPI STATE DEPARTMENT OF HEALTH  
BUREAU OF PUBLIC WATER SUPPLY  
CCR CERTIFICATION  
CALENDAR YEAR 2014

2015 JUN 11 AM 8:09

CITY OF VERONA

Public Water Supply Name

0410016

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper (attach copy of advertisement)
- On water bills (attach copy of bill)
- Email message (MUST Email the message to the address below)
- Other \_\_\_\_\_

Date(s) customers were informed: \_\_\_\_ / \_\_\_\_ / \_\_\_\_ , \_\_\_\_ / \_\_\_\_ / \_\_\_\_ , \_\_\_\_ / \_\_\_\_ / \_\_\_\_

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used \_\_\_\_\_

Date Mailed/Distributed: \_\_\_\_ / \_\_\_\_ / \_\_\_\_

CCR was distributed by Email (MUST Email MSDH a copy)

Date Emailed: \_\_\_\_ / \_\_\_\_ / \_\_\_\_

- As a URL (Provide URL \_\_\_\_\_)
- As an attachment
- As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: The Lee County Courier

Date Published: May / 14 / 2015

CCR was posted in public places. *(Attach list of locations)*

Date Posted: \_\_\_\_ / \_\_\_\_ / \_\_\_\_

CCR was posted on a publicly accessible internet site at the following address (**DIRECT URL REQUIRED**):

**CERTIFICATION**

I hereby certify that the 2014 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

Robert Juice

2014 Annual Drinking Water Quality Report  
 City of Verona  
 PWS#: 0410016  
 April 2015

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the McShan Formation and Eutaw Formation Aquifers.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the City of Verona have received lower susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Sean Johnston at 662.566.2211. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of the month at 6:00 PM at the City Hall.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2014. In cases where monitoring wasn't required in 2014, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

*Action Level* - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

*Maximum Contaminant Level (MCL)* - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

*Maximum Contaminant Level Goal (MCLG)* - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

*Maximum Residual Disinfectant Level (MRDL)* - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

*Maximum Residual Disinfectant Level Goal (MRDLG)* - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

*Parts per million (ppm) or Milligrams per liter (mg/l)* - one part per million corresponds to one minute in two years or a single penny in \$10,000.

*Parts per billion (ppb) or Micrograms per liter* - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
<b>Inorganic Contaminants</b>								
10. Barium	N	2012*	.156	.112 - .156	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2012*	2.9	1.6 - 2.9	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits

14. Copper	N	2011/13*	.2	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2012*	.143	.114 - .143	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2011/13*	4	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits

### Disinfection By-Products

Chlorine	N	2014	.9	.38 - 1.7	mg/l	0	MDRL = 4	Water additive used to control microbes
----------	---	------	----	-----------	------	---	----------	---

\* Most recent sample. No sample required for 2014.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The City of Verona works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

CRIME REPORTS

**LEE COUNTY SHERIFFS DEPARTMENT**  
 CR 884, Palmetto, a woman said she got some phone calls early this morning from a blocked number. She said it sounded like someone having sex. She said the person never talked into the phone, just heard sounds of sex acts, 5-7.

CR 1067, Tupelo, blackmail, a man said he was talking to a female on Skype, she was doing lewd acts and asked him to do the same. He took his shirt off and then the female said she had recorded him doing so. She said she was going to send the video to all of his co-workers. She then started naming off his co-workers names, 5-9.

State Park Road, possible prowler, a man said they heard a gunshot outside his house. He also heard someone on his back porch and possibly at his back door. Officer checked area and did not find anyone, 5-11.

Katie Anne Lane, Auburn, breaking and entering, a woman said the suspect is an old boyfriend, who no longer lives with her. The suspect must still have a key because he made entry through the front door. He attacked her. When he saw she had called 911, he ran out the front door and left the scene on foot, 5-12.

CR 832, Plantersville, general information, a man said he called 911 because a white female, wearing a red baseball cap, dark colored jacket with yellow or light green sleeves, said she had been beat up by her boyfriend. She didn't know where she lived. The dispatcher told him that she would send someone. He said no one ever showed up at his house and the female left walking north on CR 1205, 5-8.

Hwy. 178, Old Union, general information, a man said some people have been going to the cemetery at different hours of day and night. He has seen condoms and what he thinks is marijuana left at the cemetery. He doesn't know who is doing this but wants some extra patrols to catch whoever it is, 5-8.

Green Street, Moorville, civil, a woman said the male suspect has been living with her but left the house and has not returned. The suspect took her keys to an enclosed trailer where she stores merchandise she sells at flea markets. The suspect has been seen selling her merchandise in Moorville at the flea market. She wants her trailer and her merchandise back. She was told to go to justice court to get proper documents so deputies could escort her to retrieve her belongings, 5-8.

Hwy. 178, Moorville, a man said he was sitting on his front porch when he heard possible gun shots coming from the Skyline Super C store. He saw a white car come out of the store parking lot at a high rate of speed heading east on Hwy. 178. Deputy made contact with workers at the store and they said they didn't hear any gun

shots, 5-8.  
 CR 1766, Auburn, vandalism, a woman said she woke up and found that someone had "rolled" her yard with toilet paper. There were condoms and used diapers in her yard too, 5-9.

Milobel's Apartments, Verona, prowler, a woman said someone turned her door knob several times. She looked through the key hole but didn't see anyone. She said the same thing happened a few nights ago, 5-5.  
 Hwy. 6 West, Tupelo, simple assault, a woman said she was at the store when the male suspect pulled up and said, "You the b--- who knocked my brother out." She told him his brother pulled a gun on her, threatened to kill her and then why she knocked him out. The suspect then pulled a gun on her and said, "I will kill you for what you did to my brother." She called 911 and he left, 5-5.

CR 2156, Sallito, disturbance, a woman said the suspects got into a physical altercation inside her residence. The female suspect left on foot and deputies made no contact with the suspects. She is the mother of the male suspect and the female is the girlfriend of the male suspect, 5-5.

**TUPELO POLICE**

Officer was dispatched to Scruggs, Farm, Lawn, & Garden for shoplifting. Officer made contact with the manager who said the female suspect walked out of the store with three packs of garden seed, two pairs of earrings, and two packs of okra seeds in her purse setting off their theft system alarm. She said the merchandise was valued at \$38.95, 5-8.

Officer was dispatched to Main Walmart in response to a shoplifter. Officer made contact with loss prevention agent who said she observed the female suspect take and conceal merchandise from the toys section and pets section by placing it in her purse. Items taken were three Milobel's Day cards, two break-away collars, anti-bac ointment, and a Cranium Party game valued at \$50.72, 5-8.

Officer assisted another officer with an arrest at Lumpkin Ave. when a white Kia approached the residence. As the vehicle parked the driver began screaming that she wanted to go to jail. Officer approached the vehicle and attempted to speak with the driver. While attempting to speak with the driver a second female approached from across the yard screaming at the driver of the vehicle. The two began to engage in a verbal argument. Officers separated the two and ordered the driver to leave from in front of the residence. After several verbal commands the driver parked two driveways down and officer re-approached the vehicle. The driver that the other female had just assaulted her and said "she better go to jail for it." She said

that the other female ran up to her car and attempted to strike her with a can of Glade air freshener. She said, "She threw the can directly into the window that was down at the time and it could have struck one of my kids in the back seat." Officer was informed that the driver had an active warrant with the City of Tu-

peko. Officer asked her to step out of the vehicle. She was informed of the warrant and was allowed to call her aunt to take possession of her vehicle and her two children. She was then placed under arrest. She was informed on steps to press charges if she decided against the other woman once she got out of jail, 5-9.

**Search for Tupelo steaker still under investigation**

Tupelo Police are searching for a man who was allegedly running through his neighborhood naked May 9. Police say it happened around 7:30 p.m. on Torrey Street near West Main and Maynard Streets.

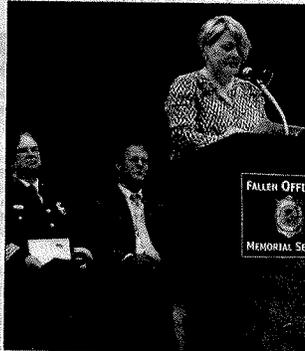

Neighbors reported to police the man ran out of a house completely naked and jumped into the back of a moving truck.

Investigators went to the house the man ran from, but no one answered the door.

At this time, police have not identified the naked man or why he ran out of the house without clothes.

It remains under investigation.

More information on this case should be directed to the TPD at 662-841-6546.

**MEMORIAL SERVICE** - Both Stauffer, wife of slain Tupelo Police Sergeant Kevin "Gale" Stauffer, Jr., was the keynote speaker at the 2015 Law Enforcement Memorial Service which was held May 11. Also taking part in the ceremony were Tupelo Police Chief Bart Aguirre and City of Tupelo Mayor Jason Shelton.

**2014 Annual Drinking Water Quality Report**

City of Verona

PWS #: 0410016

2015 JUN 11 AM 8:09

April 2015

We're pleased to present to you this year's Annual Drinking Water Quality Report. This report is designed to inform you about the quality of water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the MSBier Formation and Elysee Formation Aquifers.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the City of Verona have received lower susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Sean Johnston at 662.568.2211. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of the month at 6:00 PM at the City Hall.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2014. In cases where monitoring wasn't required in 2014, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity, microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production; and can also come from geologic activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table, you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions.

**Action Level** - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**Maximum Contaminant Level (MCL)** - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG)** - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL)** - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG)** - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Parts per million (ppm) or Milligrams per liter (mg/L)** - one part per million corresponds to one minute in two years or a single penny in \$10,000.

**Parts per billion (ppb) or Micrograms per liter (µg/L)** - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS
