

MISSISSIPPI STATE DEPARTMENT OF HEALTH
BUREAU OF PUBLIC WATER SUPPLY
CCR CERTIFICATION
CALENDAR YEAR 2014

O'tuckolofa Water Association
Public Water Supply Name

0810008
List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper (attach copy of advertisement)
- On water bills (attach copy of bill)
- Email message (MUST Email the message to the address below)
- Other _____

Date(s) customers were informed: 6/25/15 / /

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: ___ / ___ / ___

CCR was distributed by Email (MUST Email MSDH a copy) Date Emailed: ___ / ___ / ___

- As a URL (Provide URL _____)
- As an attachment
- As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: North Mississippi Herald

Date Published: 6/25/15

CCR was posted in public places. *(Attach list of locations)* Date Posted: ___ / ___ / ___

CCR was posted on a publicly accessible internet site at the following address (**DIRECT URL REQUIRED**):

CERTIFICATION

I hereby certify that the 2014 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

2014 Annual Drinking Water Quality Report
 O'Tuckolofa Water Association
 PWS#: 810008
 June 2015

2014 ANNUAL DRINKING WATER SUPPLY
 2015 JUN 16 AM 10:48

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is purchased from the City of Water Valley that has wells drawing from the Meridian Upper Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the City of Water Valley have received higher susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact James Harry Womble at 662.473.1113. We want our valued customers to be informed about their water utility. If you want to learn more, please attend the meeting scheduled meeting for Thursday, August 20, 2015 at 7:00 PM at Yalobusha Farm Bureau Building, 220 Frostland Drive.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2014. In cases where monitoring wasn't required in 2014, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
10. Barium	N	2013*	.0341	.0147 - .0341	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2013*	1.3	No Range	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits

16. Fluoride	N	2013*	.903	.461 – .903	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
19. Nitrate (as Nitrogen)	N	2014	.67	.52 - .67	ppm	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits

Disinfection By-Products

81. HAA5	N	2013*	2	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2013*	14.33	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2014	.8	.70 – 1	mg/l	0	MDRL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2014.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", the CITY OF WATER VALLEY is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year in which average fluoride sample results were within the optimal range of 0.7-1.3 ppm was 8. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 59%.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The O'Tuckolofa Water Association, Inc. works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

PROOF OF PUBLICATION
OF NOTICE

State of Mississippi
Yalobusha County

Before me, BETTY K. SHEARER, Notary Public of said County, this day came David Howell, who stated on oath that he is the Editor and Publisher of the North Mississippi Herald, a public newspaper publishing and having a general circulation in the City of Water Valley, said County and State, and made oath further that advertisement, of which a copy as printed is annexed, was published in said newspaper for 1 consecutive weeks in its issues numbered and dated as follows, to-wit:

- Vol. 127 No. 13 Dated the 25 of June 2015
- Vol. ___ No. ___ Dated the ___ of ___ 20__
- Vol. ___ No. ___ Dated the ___ of ___ 20__
- Vol. ___ No. ___ Dated the ___ of ___ 20__
- Vol. ___ No. ___ Dated the ___ of ___ 20__

Affiant further states that he has examined the foregoing 1 issues of said newspaper, that the attached Notice appeared in each of said 1 as aforesaid of said newspaper.

June 2

We're pleased to present to you this year's Annual Quality Water Report. We provide you with the services we deliver to you every day. Our constant goal is to provide you with the information you need to understand the efforts we make to continually improve the water treatment process, ensuring the quality of your water. Our water source is purchased from the Wilcox Aquifer.

The source water assessment has been completed for our public water supply to identify potential sources of contamination. A report containing the results of the assessment has been furnished to our public water system and is available for review. The report received higher susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact our customer service department. You are invited to attend our public hearing on August 20, 2015 at 7:00 PM at Yalobusha Farm Bureau Building, 220 Front Street, Water Valley, MS 38955.

We routinely monitor for constituents in your drinking water according to the table below. The table reflects the most recent results. As water travels over the surface of the earth, it can pick up substances or contaminants, such as viruses and bacteria, that may come from natural sources, such as runoff, industrial, or domestic wastewater discharges, oil and gas production, and wildlife; inorganic contaminants, such as salts and metals; synthetic and volatile organic chemicals, which are by-products of industrial processes; and radioactive contaminants, which can be natural or synthetic. In order to ensure that tap water is safe to drink, EPA prescribes maximum contaminant levels (MCLs) for public water systems. All drinking water, including bottled water, contains some contaminants. It's important to remember that the presence of some contaminants does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not know. We have provided the following definitions:

- Action Level** - the concentration of a contaminant which, if exceeded, triggers a schedule of additional monitoring.
- Maximum Contaminant Level (MCL)** - The "Maximum Allowed" (MCL) is the maximum level of a contaminant in drinking water that is allowed under the SDWA. MCLs are set as close to the MCLGs as feasible using the best available technology.
- Maximum Contaminant Level Goal (MCLG)** - The "Goal" (MCLG) is the maximum level of a contaminant in drinking water that is expected to be safe for drinking. MCLGs allow for a margin of safety.
- Maximum Residual Disinfectant Level (MRDL)** - The highest level of a disinfectant which is allowed in drinking water. The addition of a disinfectant is necessary to control microbial contaminants.
- Maximum Residual Disinfectant Level Goal (MRDLG)** - The level of a disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants in drinking water.
- Parts per million (ppm) or Milligrams per liter (mg/l)** - one part per million is equal to one milligram per liter.
- Parts per billion (ppb) or Micrograms per liter** - one part per billion corresponds to one microgram per liter.

In light of Father's Day, our message Sunday taken from Luke 15:11-32, which is a very familiar to most people. It's a parable that Jesus used, not only to describe the correct reaction of an earthly father whose son had stayed from the home he was taught to live in, but also the reaction God has when we of us stray from His path and then return to Him seeking forgiveness. These verses illustrate clearly what God would have any man do in any kind of situation. When the father saw his lost son from a great distance, rather than wait for him, he ran to him and welcomed him home. He offered instant forgiveness to his son.

TEST RESULTS				
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detect. # of Sample Exceeding MCL/ACL
Inorganic Contaminants				
10. Barium	N	2013*	.0341	.0147 - .0341
13. Chromium	N	2013*	1.3	No Range
16. Fluoride	N	2013*	.903	.461 - .903

Also, please pray for those on our prayer list for (Hebrews 13:3). We were imprisoned with them their faith as though we were those imprisoned for children. We should remember men, women, and people of many different faith. This is happening to the world who are being tortured and killed for their faith. This is happening to the world who are being tortured and killed for their faith. This is happening to the world who are being tortured and killed for their faith.
