

MISSISSIPPI STATE DEPARTMENT OF HEALTH  
BUREAU OF PUBLIC WATER SUPPLY  
CCR CERTIFICATION  
CALENDAR YEAR 2015

City of Rosedale  
Public Water Supply Name

0060016  
List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)

- Advertisement in local paper (attach copy of advertisement)
- On water bills (attach copy of bill)
- Email message (MUST Email the message to the address below)
- Other \_\_\_\_\_

Date(s) customers were informed: 6/30/16, / / , / /

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used \_\_\_\_\_

Date Mailed/Distributed: \_\_\_\_\_

CCR was distributed by Email (MUST Email MSDH a copy) Date Emailed: \_\_\_\_\_

- As a URL (Provide URL \_\_\_\_\_)
- As an attachment
- As text within the body of the email message

CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)

Name of Newspaper: The Bolivar Commercial

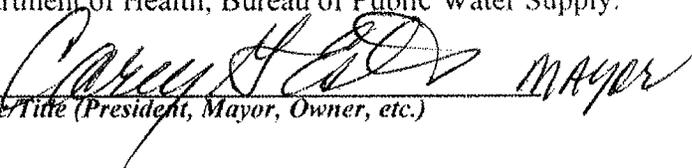

Date Published: \_\_\_\_\_

CCR was posted in public places. (Attach list of locations) Date Posted: 6/30/16

CCR was posted on a publicly accessible internet site at the following address (**DIRECT URL REQUIRED**): \_\_\_\_\_

**CERTIFICATION**

I hereby certify that the 2015 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

  
Name/Title (President, Mayor, Owner, etc.)

6-30-2016  
Date

Deliver or send via U.S. Postal Service:  
Bureau of Public Water Supply  
P.O. Box 1700  
Jackson, MS 39215

May be faxed to:  
(601)576-7800

May be emailed to:

**CCR Due to MSDH & Customers by July 1, 2016!**

*Annual Drinking Water Quality Report*  
*City of Rosedale*  
*PWS ID # 0060016*  
*June 2016*

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source consists of two wells that draw from the Sparta Aquifer.

A source water assessment has been completed for the water supply to determine the overall susceptibility of its drinking water to identify potential sources of contamination. The water supply for the City of Rosedale received a moderate susceptibility ranking to contamination.

We're pleased to report that our drinking water meets all federal and state requirements.

If you have any questions about this report or concerning your water utility, please contact Bobby Brown at 662-846-0141. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the 1<sup>st</sup> Tuesday of each month at Rosedale City Hall at 6:00 pm.

The City of Rosedale routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2015. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

**Action Level** - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**Treatment Technique (TT)** - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

**Maximum Contaminant Level** - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal** - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
<b>Inorganic Contaminants</b>								
10. Barium	N	2014*	0.019	No Range	Ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2014*	1.9	No Range	Ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	1/1/12 to 12/31/14*	0.3	None	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2014*	0.155	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	1/1/12 to 12/31/14*	2.8	None	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
<b>Disinfectants &amp; Disinfectant By-Products</b>								
Chlorine (as Cl <sub>2</sub> )	N	1/1/15 to 12/31/15	1.30	1.00 to 1.40	ppm	4	4	Water additive used to control microbes
73. THM [Total tri-halomethanes]	N	2011*	1.18	No Range	ppb	0	80	By-product of drinking water chlorination
HAA5	N	2011*	1	No Range	ppb	0	60	By-product of drinking water chlorination

\* Most recent sample results available

#### Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City of Rosedale is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

This report is being published in the paper and will not be mailed. Please call our office if you would like a copy or if you have any questions.

### Annual Drinking Water Quality Report

City of Knoxville

Page ID: 00940116

June 2016

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our overall goal is to provide you with a safe and drinkable supply of drinking water. We want you to understand the efforts we make to consistently improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source consists of two wells that draw from the Sparta Aquifer.

A source water assessment has been completed for the water supply to determine the overall susceptibility of its drinking water to identify potential sources of contamination. The water supply for the City of Knoxville received a moderate susceptibility rating to contamination.

We're pleased to report that our drinking water meets all federal and state requirements.

If you have any questions about this report or concerning your water utility, please contact Bobby Brown at 623-346-8141. We would also value customers to be informed about their water utility. If you want to learn more, please attend one of our regularly scheduled meetings. They are held on the 1<sup>st</sup> Tuesday of each month at Knoxville City Hall at 5:30 pm.

The City of Knoxville routinely monitors for contaminants in your drinking water according to federal and State laws. This table shows the results of our monitoring for the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2015. As water travels over the land or underground, it can pick up substances or contaminants such as minerals, iron, sand and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some chemicals. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In fact, some you will find every term and abbreviation you might not be familiar with. To help you better understand these terms, we've provided the following definitions:

**Action Level** - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**Treatment Technique (TT)** - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

**Maximum Contaminant Level** - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLG as is feasible using the best available treatment technology.

**Maximum Contaminant Level Goal** - The "Total MCLG" is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

### TEST RESULTS

Contaminant	Water Type	Test Method	Lead	Maximum Contaminant Level Goal	Maximum Contaminant Level	Violations	MCL	Lead Source of Contamination
<b>Inorganic Constituents</b>								
Asbestos	N	MSL <sup>1</sup>	0.01	0.01 mg/L	0.01	0	0	Background drinking water, Asbestos from rock in rocks
Barium	N	MSL <sup>1</sup>	1.3	2.0 mg/L	2.0	0	0	Groundwater and natural sources
Cadmium	N	MSL <sup>1</sup>	0.3	0.05 mg/L	0.05	0	0	Groundwater and natural sources
Copper	N	MSL <sup>1</sup>	1.3	1.3 mg/L	1.3	0	0	Groundwater and natural sources
Fluoride	N	MSL <sup>1</sup>	4.0	4.0 mg/L	4.0	0	0	Groundwater and natural sources
Iron	N	MSL <sup>1</sup>	0.3	0.3 mg/L	0.3	0	0	Groundwater and natural sources
Manganese	N	MSL <sup>1</sup>	0.05	0.05 mg/L	0.05	0	0	Groundwater and natural sources
Nitrate	N	MSL <sup>1</sup>	10	10 mg/L	10	0	0	Groundwater and natural sources
Nitrite	N	MSL <sup>1</sup>	1	1 mg/L	1	0	0	Groundwater and natural sources
Radon	N	MSL <sup>1</sup>	5	5 pCi/L	5	0	0	Groundwater and natural sources
Selenium	N	MSL <sup>1</sup>	0.07	0.07 mg/L	0.07	0	0	Groundwater and natural sources
<b>Organic &amp; Disinfection By-Products</b>								
Chloroform	N	MSL <sup>1</sup>	0.07	0.07 mg/L	0.07	0	0	Disinfection by-product
Dibromochloroform	N	MSL <sup>1</sup>	0.06	0.06 mg/L	0.06	0	0	Disinfection by-product
Trihalomethanes (TTHM)	N	MSL <sup>1</sup>	0.1	0.1 mg/L	0.1	0	0	Disinfection by-product
Halomethanes (HMT)	N	MSL <sup>1</sup>	0.08	0.08 mg/L	0.08	0	0	Disinfection by-product
Trihaloethylene (TTHM)	N	MSL <sup>1</sup>	0.1	0.1 mg/L	0.1	0	0	Disinfection by-product
Trihaloethane (TTHM)	N	MSL <sup>1</sup>	0.1	0.1 mg/L	0.1	0	0	Disinfection by-product
Trihalomethanes (TTHM)	N	MSL <sup>1</sup>	0.1	0.1 mg/L	0.1	0	0	Disinfection by-product
Trihaloethylene (TTHM)	N	MSL <sup>1</sup>	0.1	0.1 mg/L	0.1	0	0	Disinfection by-product
Trihaloethane (TTHM)	N	MSL <sup>1</sup>	0.1	0.1 mg/L	0.1	0	0	Disinfection by-product

### Additional Water Quality for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The City of Knoxville is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Lead service lines in drinking water, including service lines, and service lines to individual homes are available from the State Drinking Water Hotline at 1-800-426-4791. For more information, see [www.govwatch.com/lead](http://www.govwatch.com/lead). The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 661-576-7531 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be inorganic, organic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some constituents. The presence of these substances does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Infants, compromised persons such as persons with cancer undergoing chemotherapy, persons who take medications, organ transplant recipients, people with ESRD/HD/ES on dialysis, some elderly, and children can be particularly at risk from inorganic lead. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate actions to lessen the risk of infection by cryptosporidium and other non-bacterial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

This report is being published in this paper and will not be revised. Please call our office if you would like a copy or if you have any questions.
