CERTIFICATION
Consumer Confidence Report (CCR)
TOWN OF SALLIS

Public Water Supply Name
0040010

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: **(Attach copy of publication, water bill or other)**

- [ ] Advertisement in local paper (attach copy of advertisement)
- [ ] On water bills (attach copy of bill)
- [ ] Email message (MUST Email the message to the address below)
- [ ] Other **POSTING AT TOWN HALL AND COPIES AVAILABLE AT TOWN HALL**

Date(s) customers were informed: / / / / / / / /

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used

Date Mailed/Distributed: / / / /

CCR was distributed by Email **(MUST Email MSDH a copy)**

- [ ] As a URL (Provide URL )
- [ ] As an attachment
- [ ] As text within the body of the email message

** CCR was published in local newspaper. **(Attach copy of published CCR or proof of publication)**

Name of Newspaper: THE STAR HERALD

Date Published: 5 / 4 / 17

** CCR was posted in public places. **(Attach list of locations)**

Date Posted: 5 / 4 / 17

CCR was posted on a publicly accessible internet site at the following address **(DIRECT URL REQUIRED):**

CERTIFICATION
I hereby certify that the Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply

JACK ABLES, MAYOR
Name/Title (President, Mayor, Owner, etc.) 5/15/17

Submission options **(Select one method ONLY)**

Mail: (U.S. Postal Service)
MSDH, Bureau of Public Water Supply
P.O. Box 1700
Jackson, MS 39215

Fax: (601) 576 - 7800

Email: water.reports@msdh.ms.gov

CCR Deadline to MSDH & Customers by July 1, 2017!

PROOF OF PUBLICATION

STATE OF MISSISSIPPI
COUNTY OF ATTALA

Personally came before me, the undersigned, a NOTARY PUBLIC in and for Attala County, Mississippi, the CLERK of The Star-Herald, a newspaper published in the City of Kosciusko, Attala County, in said state, who, being duly sworn deposes and says that The Star-Herald is a newspaper as defined and described in Senate Bill No. 203 enacted at the regular session of the Mississippi Legislature of 1948, amended Section 1858, of the Mississippi Code of 1942, and that the publication of a notice, of which the annexed is a copy, in the matter of Town Of Sallis - Water Report, has been published in said newspaper 1 times, to-wit:

On the 4th day of May, 2017

Karin Grette
(Clerk)

SWORN TO AND SUBSCRIBED before me, this 4th day of May, 2017.

Daphne M. Dabbe
(Notary Public)
### Lead Source of Contamination

### Test Results

- **Maximum Contaminant Level (MCL):** 15 parts per billion (ppb) or micrograms per liter (µg/L) - the legal maximum level of a contaminant in drinking water. This is the level above which water must be treated or processed to protect public health. MCL is the legal level of a contaminant in drinking water which there is no known or expected to cause harm.

- **Maximum Contaminant Level Goal (MCLG):** 0 parts per billion (ppb) or micrograms per liter (µg/L) - the level of a contaminant in drinking water to protect public health. MCLG is an ideal level of a contaminant in drinking water that public health authorities believe is safe. MCLG is the level of a contaminant in drinking water which there is no known or expected to cause harm.

- **Exceeded:** The level of a contaminant in drinking water which there is no known or expected to cause harm.

- **Violation:** The violation of a regulation that requires the removal or treatment of a contaminant from drinking water.

- **Date Violation:** The date of the violation of a regulation that requires the removal or treatment of a contaminant from drinking water.

- **Compliance:** The level of a contaminant in drinking water which there is no known or expected to cause harm.

- **Compliance:** The date of the compliance with a regulation that requires the removal or treatment of a contaminant from drinking water.

- **Action Level:** The concentration of a contaminant which, if exceeded, triggers treatment of other contaminants which in a water system must provide the following protection:

  - **Standard:** A level of treatment applied to water that is intended to ensure the safety of the water supply.

In order to be considered a lead source, the level of lead in a water supply must be at least 0.01 mg/L. This level is the maximum level of lead in drinking water that is allowed to be present in the water supply. The level of lead in drinking water is important to public health, as it can cause serious health problems, particularly for young children and pregnant women. The level of lead in drinking water is monitored by the U.S. Environmental Protection Agency (EPA) and other regulatory bodies. The level of lead in drinking water is determined by testing the water supply for lead, which is done using a variety of methods, including chemical analysis and ion chromatography. The level of lead in drinking water is also regulated by the EPA, which sets a maximum level of lead in drinking water, known as the Maximum Contaminant Level (MCL), which must not be exceeded in the water supply.
**Please Note:** This report will not be mailed individually to customers; however, copies are available at the Town Hall.

The Town of Salem works around the clock to provide potable water to everyone. We are all in this together - our customers help us protect our water sources, which are the heart of our community - our way of life and our children's future.

Microbiological contaminants are removed from the safe drinking water by filtration. The Town of Salem Water Department provides EPAD/Gac filters as a means to decrease the risk of infection by Cryptosporidium and other related Water Quality issues. These filters are a combination of pre-filters and vacuum membranes. The filters remove most of the viral and bacterial contaminants, but may still pass some water-processed microorganisms. The presence of microorganisms does not necessarily indicate that the water is unsafe to drink. Please continue to consult the Town of Salem's Water Department for further information.
