CERTIFICATION

Consumer Confidence Report (CCR)

Town of Enterprise

Public Water Supply Name

0120004

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

Advertisement in local paper (attach copy of advertisement)

On water bills (attach copy of bill)

Email message (MUST Email the message to the address below)

Other _____

Date(s) customers were informed: 4 / 27 / 2017, / / , / /

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: _____ / /

CCR was distributed by Email (MUST Email MSDH a copy)

Date Emailed: _____ / /

As a URL (Provide URL _____)

As an attachment

As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: Clarke County Tribune

Date Published: 04 / 27 / 2017

CCR was posted in public places. *(Attach list of locations)*

Date Posted: _____ / /

CCR was posted on a publicly accessible internet site at the following address **(DIRECT URL REQUIRED)**: _____

CERTIFICATION

I hereby certify that the Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply

Jerry Murray Mayor
Name/Title (President, Mayor, Owner, etc.)

CCR Deadline to MSDH & Customers by July 1, 2017!

PROOF OF PUBLICATION

STATE OF MISSISSIPPI
COUNTY OF CLARKE

Invoice # _____

Before me, the undersigned authority in and for said county of Clarke, legal clerk of The Clarke County Tribune, a newspaper published in the City of Quitman, County of Clarke, Mississippi, being duly sworn says that the notice, a copy of which is hereto attached, was published in said newspaper as follows, to-wit:

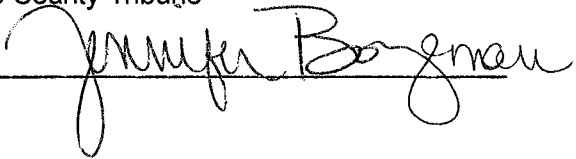

Dated Apr 27 2017

Dated _____ 20____

Dated _____ 20____

Dated _____ 20____

The Clarke County Tribune

By: 

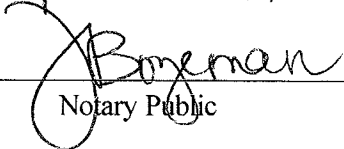

Sworn to and subscribed before me, the said Notary Public as aforesaid, do certify that the newspaper containing said notice has been produced before me and compared with the copy hereto attached and that the same is correct and truly made.

Given under my hand and the seal of said county, this the 28 day of April 2016. 2017

Annual Drinking Water Quality Report

Town of Enterprise
 PWS ID# 0120004
 April 2017

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you, with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually give the water treatment process and protect our water resources. We are committed to ensuring the quality of our water. Our water source consist of two wells that draws from the Lower Wilcox Aquifer.

Our source water assessment has been conducted to determine the overall susceptibility of its drinking water to identify potential sources of contamination. The water supply for the Town of Enterprise received a lower susceptibility ranking to contamination.

We are pleased to report that our drinking water meets all federal and state requirements. If you have any questions, about this report or concerning your water utility, please contact Randy Freeman at 601-479-9524. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of the month at 6:00 p.m. at the Enterprise Town Hall.

The Town of Enterprise routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1st to December 31st, 2016. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radionuclides. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk. In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceed, triggers not or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Contaminant	Violation	Date Collected	Level Detected	Range of Values at # of Samples Exceeding MCL/G		Unit	MCLG	MCL	Treat. Status of Contamination
				Minimum	Maximum				
Inorganic Contaminants									
1a. Barium	N	2/14/16	.009	No Range		Ppm	2		Discharge of drilling wastes discharge from metal refineries
1b. Cadmium	N	2/14/16	2.10	No Range		Ppb	100		Discharge from metal refineries
1c. Copper	N	1/27/16	0.5	No Range		Ppm	1.3		Discharge from steel and pipe mills
1d. Fluoride	N	2/14/16	0.174	No Range		Ppm	4		Extraction of natural deposits; leaching from wood preservatives
1e. Lead	N	1/11/16 to 1/23/16	1	No Range		Ppb	0		Discharge from various sources; erosion of lead-based plumbing
Disinfectants & Disinfection By-Products									
Chlorine (as Cl ₂)	N	12/31/16	0.99	No Range		mg/L			inhalation
Trihalomethanes (THM4)	N	2/14/16	122	No Range		ppb	0		By-product of drinking water disinfection
Halogenated	N	2/14/16	3.0	No Range		ppb	0		By-product of drinking water disinfection

Additional Information For Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. The Town of Enterprise is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing for \$10 per sample. Please contact 601-576-7682 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants do not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some infants and children can be particularly at risk from infections. These people should
