The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.

Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other)

☐ Advertisement in local paper (attach copy of advertisement)
☐ On water bills (attach copy of bill)
☐ Email message (MUST Email the message to the address below)
☐ Other ____________________________

Date(s) customers were informed: 6/19/17, 6/19/17, 6/19/17

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used ____________________________.

Date Mailed/Distributed: 6/19/17

CCR was distributed by Email (MUST Email MSDH a copy) [ ] As a URL (Provide URL) [ ] As an attachment [ ] As text within the body of the email message

Date Emailed: 6/19/17

CCR was published in local newspaper. (Attach copy of published CCR or proof of publication)

Name of Newspaper: The Chronicle

Date Published: 6/17/17

CCR was posted in public places. (Attach list of locations) Date Posted: 6/19/17

CCR was posted on a publicly accessible internet site at the following address (DIRECT URL REQUIRED):

Heidelberg Post Office

CERTIFICATION
I hereby certify that the 2015 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply.

Debbie Cross, Ofc. Mgr.
Name/Title (President, Mayor, Owner, etc.)

Date 5/27/17

Deliver or send via U.S. Postal Service:
Bureau of Public Water Supply
P.O. Box 1700
Jackson, MS 39215

May be faxed to:
(601) 376-7800

May be emailed to:
water.reports@msdh.ms.gov

CCR Due to MSDH & Customers by July 1, 2016!
Annual Drinking Water Quality Report
Philadelphia Water Association
PWS ID # 0310010
May 2017

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source consists of 3 wells that draw from the Cockfield Aquifer.

A source water assessment has been completed for the water supply to determine the overall susceptibility of its drinking water to identify potential sources of contamination. The water supply for Philadelphia Water Association received a moderate susceptibility ranking to contamination.

We're pleased to report that our drinking water meets all federal and state requirements.

If you have any questions about this report or concerning your water utility, please contact William “Bud” Dixon at 601-787-2117. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the 4th Monday of each month at the Philadelphia Water Association office at 6:00 pm.

Philadelphia Water Association routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1st to December 31st, 2016. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level - The “Maximum Allowed” (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - The “Goal”(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

### Additional Information for Lead
If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Philadelphia Water Association is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at [http://www.epa.gov/safewater/lead](http://www.epa.gov/safewater/lead). The Mississippi State Department of Health Public Health Laboratory offers lead testing for $10 per sample. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency’s Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

This report is being published in the paper and will not be mailed. Please call our office if you would like a copy or if you have any questions.
We're pleased to present to you this year's Annual Water Quality Report. This report contains the results of our testing for contaminants in drinking water. The water supply for the Philadelphia Water Association is purchased from the North Valley Water Pollution Control Plant, which is a large treatment plant located in Bucks County, Pennsylvania.

In this report, you will find information about the source water quality, treatment processes, and the results of our monitoring and testing. We are committed to providing you with the highest quality drinking water and to making sure that our water meets all federal and state standards.

Our water treatment plant uses a combination of chemical and biological processes to remove contaminants from the raw water. The treated water is then delivered to your homes and businesses through our distribution system.

In this year's report, we have included information about the treatment processes, the results of our monitoring and testing, and the results of our laboratory analyses. We have also included information about the source water quality, the water treatment processes, and the results of our monitoring and testing.

We are committed to providing you with the highest quality drinking water and to making sure that our water meets all federal and state standards. We appreciate your support and look forward to serving you in the future.

Sincerely,

[Signature]

Assistant Manager, Philadelphia Water Association

**Additional Information for Lead**

If present, elevated levels of lead can cause serious health problems, especially for children. Lead in drinking water is primarily from materials and components associated with service lines or home plumbing. Philadelphia Water Association is responsible for providing high quality water for drinking and other domestic uses. You can minimize the potential for lead exposure by flushing your home plumbing with cold water for several hours every day before you use water for drinking or cooking or if you have not used your water system for several days. Hot water may not have lead from the water system itself, but from plumbing and water fixtures you use.
