

# CERTIFICATION

## Consumer Confidence Report (CCR)

KEESLER AIR FORCE BASE

Public Water Supply Name

#0240049

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper (attach copy of advertisement)
- On water bills (attach copy of bill)
- Email message (MUST Email the message to the address below)
- Other Website, postings and emails

Date(s) customers were informed: 06 / 27 / 17, 06 / 28 / 17, 06 / 30 / 17

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used \_\_\_\_\_

Date Mailed/Distributed:     /    /    

CCR was distributed by Email (MUST Email MSDH a copy)

Date Emailed: 06 / 27 / 17

- As a URL (Provide URL <http://www.keesler.af.mil/Portals/14/documents/Environmental/CCR 2016 Annual Water Quality Report.pdf>)
- As an attachment
- As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: \_\_\_\_\_

Date Published:     /    /    

CCR was posted in public places. *(Attach list of locations)*

Date Posted: 06 / 27 / 17

CCR was posted on a publicly accessible internet site at the following address (**DIRECT URL REQUIRED**):

<http://www.keesler.af.mil/Portals/14/documents/Environmental/CCR 2016 Annual Water Quality Report.pdf>

### CERTIFICATION

I hereby certify that the Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply

**Subject:** Keesler AFB 2016 Annual Water Quality Report

\*Please view in HTML\*

Team Keesler,

1. The Bioenvironmental Engineering (BE) Flight is pleased to present this year's Annual Water Quality Report (aka Consumer Confidence Report [CCR]) as required by the Safe Drinking Water Act (SDWA). The report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. The US Environmental Protection Agency (EPA) requires a drinking water quality summary report be published within six months of the year's end and made available to all drinking water system customers.

2. You can view and download the report at the following web address:

[http://www.keesler.af.mil/Portals/14/documents/Environmental/CCR 2016 Annual Water Quality Report.pdf](http://www.keesler.af.mil/Portals/14/documents/Environmental/CCR%202016%20Annual%20Water%20Quality%20Report.pdf)  
<<http://www.keesler.af.mil/Portals/14/documents/Environmental/CCR%202016%20Annual%20Water%20Quality%20Report.pdf>>

3. The Bottom Line: Our water is considered safe to drink in accordance with all SDWA standards. No contaminants exceeded USEPA standards in 2016, and no action is required for Keesler AFB consumers. In addition to water quality data, the report also contains useful information such as how to

conserve water and additional resources available from the EPA.

4. A physical copy of the report will be provided by the BE Flight on request. To request a physical copy of the report in person, the BE office is located in building 420 on Fisher Street, next to the Fisher House and across the street from the Sablich Center. Office hours are typically 0730-1630 M-F.

5. Please contact the BE Flight Commander, Major Dan Schneider, by e-mail at [81MDG.Bio@us.af.mil](mailto:81MDG.Bio@us.af.mil) or at (228) 376-0590 if you have any questions regarding the contents of this letter or the Consumer Confidence Report.

FREEMAN HOLIFIELD, JR., Lt Col USAF, BSC

Commander, 81st Aerospace Medicine Squadron

301 Fisher Street

Keesler AFB, MS 39534

# Consumer Confidence Report

## **Is my water safe?**

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) for Keesler AFB as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies.

## **Do I need to take special precautions?**

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

## **Where does my water come from?**

Keesler AFB's drinking water is pumped from the Lower Graham Ferry Aquifer; a groundwater source. All water provided to Keesler is pumped from wells located on base property. The water from the wells is mixed, treated, stored, and distributed.

## **Source water assessment and its availability**

The purpose of a source water assessment is to determine the quality of the raw water used for drinking water. At Keesler, the only treatment performed on source water is the addition of chlorine and fluoride. Because of the limited chemical treatment, the analytical results for Keesler's drinking water are representative of its source water.

## **Why are there contaminants in my drinking water?**

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or

from human activity: microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

### **How can I get involved?**

Education is key to getting involved and understanding your drinking water. Additional information is available from the Environmental Protection Agency; viewable on the WWW (World Wide Web) at <http://www.epa.gov/safewater/>.

### **Description of Water Treatment Process**

Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisms that may be in the water. Disinfection is considered to be one of the major public health advances of the 20th century.

### **Water Conservation Tips**

Did you know that the average U.S. household uses approximately 400 gallons of water per day or 100 gallons per person per day? Luckily, there are many low-cost and no-cost ways to conserve water. Small changes can make a big difference - try one today and soon it will become second nature.

- Take short showers - a 5 minute shower uses 4 to 5 gallons of water compared to up to 50 gallons for a bath.
- Shut off water while brushing your teeth, washing your hair and shaving and save up to 500 gallons a month.
- Use a water-efficient showerhead. They're inexpensive, easy to install, and can save you up to 750 gallons a month.
- Run your clothes washer and dishwasher only when they are full. You can save up to 1,000 gallons a month.
- Water plants only when necessary.
- Fix leaky toilets and faucets. Faucet washers are inexpensive and take only a few minutes to replace. To check your toilet for a leak, place a few drops of food coloring in the tank and wait. If it seeps into the toilet bowl without flushing, you have a leak. Fixing it or replacing it with a new, more efficient model can save up to 1,000 gallons a month.

- Adjust sprinklers so only your lawn is watered. Apply water only as fast as the soil can absorb it and during the cooler parts of the day to reduce evaporation.
- Teach your kids about water conservation to ensure a future generation that uses water wisely. Make it a family effort to reduce next month's water bill!
- Visit [www.epa.gov/watersense](http://www.epa.gov/watersense) for more information.

### **Cross Connection Control Survey**

The purpose of this survey is to determine whether a cross-connection may exist at your home or business. A cross connection is an unprotected or improper connection to a public water distribution system that may cause contamination or pollution to enter the system. We are responsible for enforcing cross-connection control regulations and insuring that no contaminants can, under any flow conditions, enter the distribution system. If you have any of the devices listed below please contact us so that we can discuss the issue, and if needed, survey your connection and assist you in isolating it if that is necessary.

- Boiler/ Radiant heater (water heaters not included)
- Underground lawn sprinkler system
- Pool or hot tub (whirlpool tubs not included)
- Additional source(s) of water on the property
- Decorative pond
- Watering trough

### **Source Water Protection Tips**

Protection of drinking water is everyone's responsibility. You can help protect your community's drinking water source in several ways:

- Eliminate excess use of lawn and garden fertilizers and pesticides - they contain hazardous chemicals that can reach your drinking water source.
- Pick up after your pets.
- If you have your own septic system, properly maintain your system to reduce leaching to water sources or consider connecting to a public water system.
- Dispose of chemicals properly; take used motor oil to a recycling center.
- Volunteer in your community. Find a watershed or wellhead protection organization in your community and volunteer to help. If there are no active groups, consider starting one. Use EPA's Adopt Your Watershed to locate groups in your community, or visit the Watershed Information Network's How to Start a Watershed Team.
- Organize a storm drain stenciling project with your local government or water supplier. Stencil a message next to the street drain reminding people "Dump No Waste - Drains to River" or "Protect Your Water." Produce and distribute a flyer for households to remind residents that storm drains dump directly into your local water body.

### **Other Information**

To comply with the "Regulation Governing Fluoridation of Community Water Supplies,"

Keesler Air Force Base is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year in which average fluoride sample results were within optimal range of 0.7-1.3 ppm was 10. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7-1.3 ppm was 86%.

### **Results of voluntary monitoring: Perfluorooctane Sulfonate (PFOS) and Perfluorooctanoic Acid (PFOA)**

In May 2016, the U.S. Environmental Protection Agency (EPA) issued Drinking Water Health Advisories for both PFOA and PFOS, organic chemicals that are part of a larger group of chemicals referred to as perfluoroalkyl substances (PFASs). PFASs have been used in the production of materials (e.g. cookware) that are resistant to water, grease or stains. They are also used for firefighting at airfields as part of Aqueous Film Forming Foam (AFFF) fire extinguishing agent and in a number of industrial processes. While the EPA has not established national primary drinking water regulations for PFOA or PFOS, the EPA established a health advisory (HA) level of 70 nanograms per liter (ng/L) (aka. parts per trillion, or ppt) for the combined concentration of these chemicals. The Department of Defense proactively directed all installations to test their drinking water for PFOS and PFOA by 31 Jan 17. Keesler Bioenvironmental Engineering and Civil Engineering Water Operations sections collected all required samples for both raw (untreated) and treated water from each operational well and/or treatment facility on base. All results were below the laboratory's 2 ng/L detection level/ minimum reporting limit (MRL). Because no results exceeded the USEPA HA level of 70 ng/L, no additional sampling is planned at this time.

### **Additional Information for Lead**

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Keesler Air Force Base is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

### **Additional Information for Arsenic**

While your drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continues to research the health effects of low levels of arsenic which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems.

## Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

| Contaminants  | MCLG<br>or<br>MRDLG | MCL,<br>TT, or<br>MRDL | Detect<br>In<br>Your<br>Water | Range |        | Sample<br>Date | Violation | Typical Source   |
|---|---------------------|------------------------|-------------------------------|-------|--------|----------------|-----------|--|
|   |                     |                        |                               | Low   | High   |                |           |  |
| <b>Disinfectants &amp; Disinfection By-Products</b>   |                     |                        |                               |       |        |                |           |  |
| (There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants) |                     |                        |                               |       |        |                |           |  |
| Chlorine (as Cl <sub>2</sub> ) (ppm)  | 4                   | 4                      | 1                             | 0.42  | 2.22   | 2016           | No        | Water additive used to control microbes  |
| Haloacetic Acids (HAA5) (ppb)   | NA                  | 60                     | 9                             | 7     | 9      | 2014           | No        | By-product of drinking water chlorination  |
| TTHMs [Total Trihalomethanes] (ppb)   | NA                  | 80                     | 8.65                          | NA    | NA     | 2014           | No        | By-product of drinking water disinfection  |
| <b>Inorganic Contaminants</b>   |                     |                        |                               |       |        |                |           |  |
| Barium (ppm)  | 2                   | 2                      | 0.0113                        | 0.001 | 0.0113 | 2015           | No        | Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits |
| Chromium (ppb)  | 100                 | 100                    | 1.9                           | 0.5   | 1.9    | 2015           | No        | Discharge from steel and pulp mills; Erosion of natural deposits                           |

## Undetected Contaminants

The following contaminants were monitored for, but not detected, in your water.

| Contaminants                    | MCLG<br>or<br>MRDLG | MCL,<br>TT, or<br>MRDL | Your<br>Water | Violation | Typical Source   |
|---------------------------------|---------------------|------------------------|---------------|-----------|--|
| 1,1,1-Trichloroethane (ppb)     | 200                 | 200                    | ND            | No        | Discharge from metal degreasing sites and<br>other factories   |
| 1,1,2-Trichloroethane (ppb)     | 3                   | 5                      | ND            | No        | Discharge from industrial chemical factories   |
| 1,1-Dichloroethylene (ppb)      | 7                   | 7                      | ND            | No        | Discharge from industrial chemical factories   |
| 1,2,4-Trichlorobenzene<br>(ppb) | 70                  | 70                     | ND            | No        | Discharge from textile-finishing factories   |
| 1,2-Dichloroethane (ppb)        | 0                   | 5                      | ND            | No        | Discharge from industrial chemical factories   |
| 1,2-Dichloropropane (ppb)       | 0                   | 5                      | ND            | No        | Discharge from industrial chemical factories   |
| Antimony (ppb)                  | 6                   | 6                      | ND            | No        | Discharge from petroleum refineries; fire<br>retardants; ceramics; electronics; solder; test<br>addition.                                    |
| Arsenic (ppb)                   | 0                   | 10                     | ND            | No        | Erosion of natural deposits; Runoff from<br>orchards; Runoff from glass and electronics<br>production wastes                                 |
| Benzene (ppb)                   | 0                   | 5                      | ND            | No        | Discharge from factories; Leaching from gas<br>storage tanks and landfills   |
| Beryllium (ppb)                 | 4                   | 4                      | ND            | No        | Discharge from metal refineries and coal-<br>burning factories; Discharge from electrical,<br>aerospace, and defense industries              |
| Cadmium (ppb)                   | 5                   | 5                      | ND            | No        | Corrosion of galvanized pipes; Erosion of<br>natural deposits; Discharge from metal<br>refineries; runoff from waste batteries and<br>paints |

Annual Water Quality Report  
January – December 2016  
Keesler AFB, MS

| Contaminants                            | MCLG or MRDLG | MCL, TT, or MRDL | Your Water | Violation | Typical Source  |
|---|---------------|------------------|------------|-----------|---|
| Carbon Tetrachloride (ppb)              | 0             | 5                | ND         | No        | Discharge from chemical plants and other industrial activities  |
| Chlorobenzene (monochlorobenzene) (ppb) | 100           | 100              | ND         | No        | Discharge from chemical and agricultural chemical factories   |
| Cyanide (ppb)                           | 200           | 200              | ND         | No        | Discharge from plastic and fertilizer factories; Discharge from steel/metal factories                             |
| Dichloromethane (ppb)                   | 0             | 5                | ND         | No        | Discharge from pharmaceutical and chemical factories  |
| Ethylbenzene (ppb)                      | 700           | 700              | ND         | No        | Discharge from petroleum refineries   |
| Mercury [Inorganic] (ppb)               | 2             | 2                | ND         | No        | Erosion of natural deposits; Discharge from refineries and factories; Runoff from landfills; Runoff from cropland |
| Nitrate [measured as Nitrogen] (ppm)    | 10            | 10               | ND         | No        | Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits                       |
| Nitrite [measured as Nitrogen] (ppm)    | 1             | 1                | ND         | No        | Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits                       |
| Selenium (ppb)                          | 50            | 50               | ND         | No        | Discharge from petroleum and metal refineries; Erosion of natural deposits; Discharge from mines                  |
| Styrene (ppb)                           | 100           | 100              | ND         | No        | Discharge from rubber and plastic factories; Leaching from landfills  |
| Tetrachloroethylene (ppb)               | 0             | 5                | ND         | No        | Discharge from factories and dry cleaners   |
| Thallium (ppb)                          | 0.5           | 2                | ND         | No        | Discharge from electronics, glass, and Leaching from ore-processing sites; drug factories                         |
| Toluene (ppm)                           | 1             | 1                | ND         | No        | Discharge from petroleum factories  |
| Trichloroethylene (ppb)                 | 0             | 5                | ND         | No        | Discharge from metal degreasing sites and other factories   |
| Vinyl Chloride (ppb)                    | 0             | 2                | ND         | No        | Leaching from PVC piping; Discharge from plastics factories   |
| cis-1,2-Dichloroethylene (ppb)          | 70            | 70               | ND         | No        | Discharge from industrial chemical factories  |
| o-Dichlorobenzene (ppb)                 | 600           | 600              | ND         | No        | Discharge from industrial chemical factories  |
| p-Dichlorobenzene (ppb)                 | 75            | 75               | ND         | No        | Discharge from industrial chemical factories  |
| trans-1,2-Dichloroethylene (ppb)        | 100           | 100              | ND         | No        | Discharge from industrial chemical factories  |

| Unit Descriptions |            |
|-------------------|------------|
| Term              | Definition |
|                   |            |

| Unit Descriptions |  |
|-------------------|--|
| ppm               | ppm: parts per million, or milligrams per liter (mg/L) |
| ppb               | ppb: parts per billion, or micrograms per liter (µg/L) |
| NA                | NA: Not Applicable                                     |
| ND                | ND: Not detected                                       |
| NR                | NR: Monitoring not required, but recommended.          |

| Important Drinking Water Definitions |   |
|--------------------------------------|---|
| Term                                 | Definition  |
| MCLG                                 | MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.  |
| MCL                                  | MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.   |
| TT                                   | TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.  |
| AL                                   | AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.   |
| Variances and Exemptions             | Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.   |
| MRDLG                                | MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants. |
| MRDL                                 | MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.                              |
| MNR                                  | MNR: Monitored Not Regulated  |
| MPL                                  | MPL: State Assigned Maximum Permissible Level   |
