CERTIFICATION

Consumer Confidence Report (CCR)

TOWN OF SCOOBA

Public Water Supply Name
0350004

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must mail, fax or email a copy of the CCR and Certification to MSDH. Please check all boxes that apply.**

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- [ ] Advertisement in local paper (attach copy of advertisement)
- [ ] On water bills (attach copy of bill)
- [ ] Email message (MUST Email the message to the address below)
- [ ] Other

Date(s) customers were informed:  / / / / / / /

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used

Date Mailed/Distributed: 06 / 27 / 2017

CCR was distributed by Email (MUST Email MSDH a copy) Date Emailed: 06 / 27 / 2017

- [ ] As a URL (Provide URL )
- [ ] As an attachment
- [ ] As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: KEMPER MESSENGER

Date Published: 06 / 22 / 2017

CCR was posted in public places. *(Attach list of locations)* Date Posted: / / /

CCR was posted on a publicly accessible internet site at the following address **(DIRECT URL REQUIRED):**

CERTIFICATION

I hereby certify that the Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply

Allen Beaty, Mayor

Date 06-27-2017

Name/Title (President, Mayor, Owner, etc.)

Submission options *(Select one method ONLY)*

**Mail:** (U.S. Postal Service)
MSDH, Bureau of Public Water Supply
P.O. Box 1700
Jackson, MS 39215

**Fax:** (601) 576 - 7800

**Email:** water.reports@msdh.ms.gov

CCR Deadline to MSDH & Customers by July 1, 2017!
We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality of the water we provide to you every day. Our goal is to provide you with a safe, reliable, and sustainable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies. Our water source is from wells and springs located in the Presque Isle Water District.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to the potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been submitted to our public water system and is available for viewing upon request. The wells for the Presque Isle Water District produces lower level to medium-range rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Catherine Holten at 662-7610. We want our valued consumers to be informed about their water supplies. If you need to learn more, please join us at any of our regularly scheduled meetings. The next one is the first Monday of the month at 7:00 PM at the Town Hall.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. That table below lists as of the drinking water contaminants that were detected during the period of January 1 to December 31, 2016. In cases where monitoring wa fall man or continued from 2015, the levels that were measured are used. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and contaminants, such as rocks and algae. Water can pick up substances or contaminants from the presence of natural or human activities, including pesticides, hydrocarbons, bacteria, and viruses. Water can also have naturally occurring contaminants such as lead and copper. These substances can grow and multiply, which can be naturally occurring or result from human activities.

In this table you will find many terms and abbreviations you may not be familiar with. To help you better understand these terms, we've provided the following definitions:

**Action Level**: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a public water system must follow.

**Maximum Contaminant Level (MCL)**: The Maximum Allowable Level (MAL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set in accordance with the US Public Health Service and are designed to protect public health.

**Maximum Contaminant Level Goal (MCLG)**: The ideal level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs do not reflect the benefits of treatment by public water systems.

**PFC per million ppm (parts per million)**: One part per million corresponds to one part in ten billion, or a single penny in $100,000,000.

**TEST RESULTS**

As you can see by the table, our system is free of violations. We are proud of our drinking water quality and are committed to providing a safe, reliable, and sustainable supply of drinking water. We are dedicated to improving the drinking water quality and are committed to providing a safe, reliable, and sustainable supply of drinking water.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of these monitoring are required to ensure that your drinking water meets health standards. In an effort to ensure sustained compliance with drinking water standards, MCLs and MCLGs, we have established detection limits for many contaminants.

If present, elevated levels of certain contaminants can cause serious health problems, especially for pregnant women and young children. Lead in drinking water primarily from materials and appliances associated with service lines and home plumbing. Our water system is not responsible for identifying the source of high levels of lead, but is required to remove the variable of materials used in plumbing connections. When your water has been sitting for a short time, please be sure to flush your tap for 30 seconds before using it. 2017

If present, elevated levels of certain contaminants can cause serious health problems, especially for pregnant women and young children. Lead in drinking water primarily from materials and appliances associated with service lines and home plumbing. Our water system is not responsible for identifying the source of high levels of lead, but is required to remove the variable of materials used in plumbing connections. When your water has been sitting for a short time, please be sure to flush your tap for 30 seconds before using it.
Our water is treated to protect your health. This report is designed to inform you about the quality of water and services we deliver to you every day. Our constant goal is to provide you with safe and dependable supply of drinking water. We are committed to providing you with the best information because informed customers are our best customers. Our major source of water is from wells, which are the best natural filters.

The source water assessment has been completed for our public water system to determine the overall acceptability of its drinking water supply to identify potential sources of contamination. A record containing detailed information about the susceptibility of the public water system and its ability to identify and control sources of contamination. The results for the Golden Valley Water District are available to help protect residents in terms of acceptability to contamination.

If you have any questions about the quality of your drinking water, please contact Catherine Halliday at 928-476-6416. We want our customers to be informed about your drinking water service. If you want to learn more, please join us at any of our meetings or workshops.

The following section contains a detailed analysis of the water quality. It's important to note that some contaminants may be present in the water, even if it meets all regulatory standards.
