2018 CERTIFICATION Consumer Confidence Report (CCR)

Town of Sturgis

Public Water System Name

530021

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must email, fax (but not preferred) or mail, a copy of the CCR and Certification to the MSDH.** Please check all boxes that apply.

- Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*
 - Advertisement in local paper *(Attach copy of advertisement)*
 - On water bills *(Attach copy of bill)*
 - Email message *(Email the message to the address below)*
 - Other _____

Date(s) customers were informed: 4/26/2019 / / /2019

- CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: ____ / ____ / ____

- CCR was distributed by Email *(Email MSDH a copy)* Date Emailed: ____ / ____ / 2019
 - As a URL _____ *(Provide Direct URL)*
 - As an attachment
 - As text within the body of the email message

- CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: Starkville Daily News

Date Published: 4/26/2019

- CCR was posted in public places. *(Attach list of locations)* Date Posted: ____ / ____ / 2019

- CCR was posted on a publicly accessible internet site at the following address: _____ *(Provide Direct URL)*

CERTIFICATION

I hereby certify that the CCR has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the PWS officials by the Mississippi State Department of Health, Bureau of Public Water Supply

Jane Ethredge

2018 Annual Drinking Water Quality Report
Town of Sturgis
PWS#: 530021
April 2019

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies.

If you have any questions about this report or concerning your water utility, please contact Richard Vowell at 662.465.7970. We want our valued customers to be informed about their water utility. If you want to learn more, please join us at any of our regularly scheduled meetings. They are held on the first Tuesday of the month at 6:00 PM at Sturgis Town Hall.

Our water source is from wells drawing from the Gordo Formation Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Town of Sturgis have received lower to moderate ranking in terms of susceptibility to contamination.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2018. In cases where monitoring wasn't required in 2018, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL/MRDL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
8. Arsenic	N	2018	4.6	3.8 – 4.6	ppb	n/a	10	Erosion of natural deposits; runoff from orchards; runoff from glass

								and electronics production wastes
10. Barium	N	2018	.0789	.0769 - .0789	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2018	3.1	1.6 – 3.1	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2015/17*	.1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2018	.855	.678 - .855	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2015/17*	6	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
21. Selenium	N	2018	5.8	3 – 5.8	ppb	50	50	Discharge from petroleum and metal refineries; erosion of natural deposits; discharge from mines

Disinfection By-Products

81. HAA5	N	2016*	12	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2016*	68	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2018	.6	.5 - .9	ppm	0	MRDL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2018.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Town of Sturgis works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

BOYLES

MSU's Risk Management and Insurance Hall of Fame in 2007.

This year, MSU will hold three commencement ceremonies. On May 2, the university will hold commencement ceremonies for the MSU College of Business and its Adkinson School of Accountancy and the MSU College of Education at 3:30 p.m. On May 3, the university will hold commencement for students in the MSU College of Architecture, Art and Design, MSU College of Arts and Sciences and MSU College of Veterinary Medicine at 9:40 a.m., and Bagley College of Engineering, MSU College of Agriculture and Life Sciences, MSU College of Forestry Resources, as well as university students, including a term as its president in 1997. What's more, he serves on the MSU College of Business' Risk Management and Insurance Advisory Board. He was inducted into

MSU National Alumni Association Board of Directors, including a term as its president in 1997. What's more, he serves on the MSU College of Business' Risk Management and Insurance Advisory Board. He was inducted into

OVERSTREET

From page 1

After the proposal was approved, they began to move forward with finding a coop. Born Camp donated his chicken coop to the school and Dr. Darrin Dodds and 12 of his student helpers moved the large coop to Overstreet. Mulrooney's husband Pete Mulrooney is currently finalizing the needed touches on the structure such as hardware fencing, picket fencing, and locks.

Mulrooney has chosen teachers from each subject area to be on a "Chicken Committee." Milnes, Mulrooney, Summer Bunnin, Chelsi Brasler, Emily Dill and Hope Dumas all work to make the experience possible for Overstreet students.

Overstreet hopes other teachers want to bring the experience to their school as well. If anyone knowledgeable about chickens would like to work with the school on the project contact Niki Mulrooney at 662-324-4193.

Students are now aware of how much value food has they waste at lunch and buffets. The next aspect is the simple enjoyment of sitting outside watching life happen.

"Students have gone out there when they've been kind of like a little wired up and getting a little anxious and they sit out there and look. It slips away," she said.

Obituaries

Mr. Varico D. Bush

2019 at 1:00 P.M. • 6:00 P.M. at West Memorial Funeral Home, Starkville, MS.

Mr. Varico D. Bush, 43, of Jackson, MS, died on April 17, 2019 in Jackson, MS. Interment will follow funeral service will be held Saturday, April 27, 2019 at 11:00 A.M. at Trinity Cemetery, M.B. Church, Starkville, MS. Visitation will be held Friday, April 26, 2019 at 5:00 P.M. at the funeral home.

2018 Annual Drinking Water Quality Report

Town of Sarge
PHSR 53021
April 2019

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our consistent goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies.

If you have any questions about this report or concerning your water utility, please contact Richard Nowell at 662-465-7970. We want our valued customers to be informed about their water utility. If you want to learn more, please join us at any of our regularly scheduled meetings. They are held on the first Tuesday of the month at 6:00 PM at Sarge Town Hall.

Our water source is from wells drawing from the Gordo Formation Aquifer. This source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Town of Sarge have received lower to moderate ratings in terms of susceptibility to contamination.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2018. In cases where monitoring was required in 2018, the table reflects the most recent results. As water travels over the surface of land or underground, it picks up naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, but may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, and petroleum production, and pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential use; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and auto repair shops; radon, a naturally occurring radioactive gas; and disinfection by-products, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to maintain tap water to safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

HOUSEHOLD HAZARDOUS WASTE COLLECTION DAY

SATURDAY, APRIL 27, 2019

LOCATION: GTR Landfill, Starkville, MS
(Just west of US 45A on Old West Point Road)
TIME: 9:00 A.M. UNTIL 2:00 P.M.

NOTICE: ONLY ITEMS FROM HOUSEHOLDS (RESIDENTIAL) WILL BE ACCEPTED. Items from Business or Industry will NOT be accepted.

TYPES OF ITEMS TO BE ACCEPTED

AEROSOLS • BATTERIES • PAINT • HOUSEHOLD CLEANERS • CHLORINE WOOD FINISH • AUTOMOBILE FLUIDS • HERBICIDES • RODENT POISON OIL FILTERS • PESTICIDES • ELECTRONIC WASTE • LIGHTER FLUID

TYPES OF ITEMS NOT ACCEPTED

EXPLOSIVES • INFECTIOUS WASTE • MUNITIONS • RADIOACTIVE WASTE GAS CANISTERS/CYLINDERS (Butane, Propane, Freon, Insulation, Etc.) FREON DEVICES (Air Conditioners, Refrigerators, Etc.)

FOR MORE INFORMATION, CONTACT G.T.R. SOLID WASTE MANAGEMENT AUTHORITY AT 662-324-7566
