2018 CERTIFICATION

Consumer Confidence Report (CCR)

Big Creek Water Association

Public Water System Name

0070002

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must email, fax (but not preferred) or mail, a copy of the CCR and Certification to the MSDH.** Please check all boxes that apply.

- Customers were informed of availability of CCR by: (*Attach copy of publication, water bill or other*)
 - Advertisement in local paper (*Attach copy of advertisement*)
 - On water bills (*Attach copy of bill*)
 - Email message (*Email the message to the address below*)
 - Other _____

Date(s) customers were informed: ___ / ___ / 2019 ___ / ___ / 2019 ___ / ___ / 2019

- CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: ___ / ___ / ___

- CCR was distributed by Email (*Email MSDH a copy*) Date Emailed: ___ / ___ / 2019
 - As a URL _____ (*Provide Direct URL*)
 - As an attachment
 - As text within the body of the email message

- CCR was published in local newspaper. (*Attach copy of published CCR or proof of publication*)

Name of Newspaper: The Calhoun County Journal

Date Published: 5 / 8 / 2019

- CCR was posted in public places. (*Attach list of locations*) Date Posted: ___ / ___ / 2019

- CCR was posted on a publicly accessible internet site at the following address: _____ (*Provide Direct URL*)

CERTIFICATION

I hereby certify that the CCR has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the PWS officials by the Mississippi State Department of Health, Bureau of Public Water Supply

CCR Deadline to MSDH & Customers by July 1, 2019!

2018 Annual Drinking Water Quality Report
 Big Creek Water Association
 PWS#: 0070002
 April 2019

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies. Our water source is from wells drawing from the Gordo Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Big Creek Water Association have received lower rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Wanda Harrison at 662.414.1013. We want our valued customers to be informed about their water utility. If you want to learn more, please join us at any of our regularly scheduled meeting to be held on August 5, 2019 at 7:00 PM at the Big Creek City Hall.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2018. In cases where monitoring wasn't required in 2018, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Picocuries per liter (pCi/L) - picocuries per liter is a measure of the radioactivity in water.

TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL/MRDL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Radioactive Contaminants								
6. Radium 226 Radium 228	N	2016*	1.3 2.3	No Range	pCi/l	0	5	Erosion of natural deposits
Inorganic Contaminants								
8. Arsenic	N	2018	10.6	.47 – 10.6	ppb	n/a	10	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes

10. Barium	N	2018	.1463	.1112 - .1463	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2018	4.2	3.5 - 4.2	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2015/17*	.5	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2018	.443	.434 - .443	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2015/17*	2	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
21. Selenium	N	2018	4.1	2.6 - 4.1	ppb	50	50	Discharge from petroleum and metal refineries; erosion of natural deposits; discharge from mines

Disinfection By-Products

81. HAA5	N	2017*	5	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2017*	49.2	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2018	.9	.4 - 1.4	mg/l	0	MRDL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2018.

Inorganic Contaminants:

(9) Arsenic. Some people who drink water containing arsenic in excess of the MCL over many years could experience skin damage or problems with their circulatory system, and may have an increased risk of getting cancer.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Big Creek Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

Proof Of Publication

STATE OF MISSISSIPPI,
COUNTY OF CALHOUN

Personally came before me, the undersigned, a Notary Public, in and for Calhoun County, Mississippi, Joel McNeece, Publisher of The Calhoun County Journal, a newspaper published in Bruce, Calhoun County, in said state, who being duly sworn, deposes and says that The Calhoun County Journal is a newspaper as defined and prescribed in Senate Bill No. 203 enacted at the regular session of the Mississippi Legislature of 1948, amending Section 1858 of the Mississippi Code of 1942, and the publication of a notice, of which annexed copy, in the matter of

BIG CREEK WATER ASSOCIATION WATER QUALITY REPORT

has been made in said newspaper one time, to-wit:

On the 8 day of MAY 2019

2018 Annual Drinking Water Quality Report
Big Creek Water Association
FWSE 0070002
April 2019

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and how we strive to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continuously improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies. Our water source is from wells drawing from the Gadsden Aquifer.

The Annual Water Assessment has been completed for our public water system to determine the overall acceptability of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the acceptability determination was made has been furnished to our public water system and is available for viewing upon request. The wells for the Big Creek Water Association have received lower ratings of vulnerability to contamination.

If you have any questions about this report or concerning your water utility, please contact Wade Hampton at 862-414-1014. We want our valued customers to be informed about their water utility. If you want to learn more please join us at any of our regularly scheduled meetings to be held on August 8, 2018 at 7:00 PM at the Big Creek City Hall.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2018. In cases where monitoring wasn't required in 2018, the table reflects the most recent results. As water flows over the surface of land or underground it dissolves naturally occurring minerals and, in some cases, radioactive material and can pick up substances from the presence of animals or from human activity. Common contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife, include: coliform bacteria, such as E. coli and Shigella, which can be harmful; coliforms or fecal coliform bacteria, which indicate the presence of animal waste; nitrates, which can be harmful to infants; and lead, which can be harmful to children. Other contaminants, such as herbicides and pesticides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential lawns, include: chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and auto repair facilities; radioactive contaminants, which can be naturally occurring or be the result of uranium mining and processing, in order to ensure that the water is safe to drink. EPA prescribes regulations that limit the amount of certain contaminants in water drawn by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least trace amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In the table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowable" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLG as is feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contamination.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contamination.

Pounds per billion gallons or Milligrams per liter (mg/L) - one part per million corresponds to one minute in two years of a single penny or \$10,000.

Pounds per gallon (ppg) or Milligrams per liter - one part per million corresponds to one minute in 2,000 years or a single penny or \$10,000,000.

Parts per million (ppm) - parts per million is a measure of the relative parts in 1,000,000.

Contaminant	Volume	Date Collected	Level Detected	Range of Values or # of Samples	Unit Measure	MCLG	MCL	MRDL	MRDLG	Other Source of Contaminant
Radioactive Contaminants										
1. Radium 226	g	2018	1.1	No Range	ppb	5	5			Remains of natural deposits, could come from pipes and plumbing materials.
2. Radium 228	g	2018	1.1	No Range	ppb	5	5			Remains of natural deposits, could come from pipes and plumbing materials.
Inorganic Contaminants										
3. Arsenic	g	2018	1.0	0.7 - 1.0	ppm	0.05	0.05			Remains of natural deposits, could come from pipes and plumbing materials.
4. Barium	g	2018	1000	1100 - 1400	ppm	2	2			Remains of natural deposits, could come from pipes and plumbing materials.
5. Calcium	g	2018	4.2	3.3 - 4.2	ppm	100	100			Remains of natural deposits, could come from pipes and plumbing materials.
6. Chloride	g	2018	5	5	ppm	1.5	1.5			Remains of natural deposits, could come from pipes and plumbing materials.
7. Fluoride	g	2018	400	400 - 500	ppm	4	4			Remains of natural deposits, could come from pipes and plumbing materials.
8. Iron	g	2018	0	0	ppm	0	0			Remains of natural deposits, could come from pipes and plumbing materials.
9. Nitrogen	g	2018	4.5	3.0 - 4.5	ppm	10	10			Remains of natural deposits, could come from pipes and plumbing materials.
Disinfection By-Products										
10. THM5	g	2018	5	No Range	ppm	0	0			By-product of drinking water disinfection.
11. Total Trihalomethanes (TTHM)	g	2018	4.5	No Range	ppm	0	0			By-product of drinking water disinfection.
12. Haloacetic Acids (HAA5)	g	2018	5	4 - 7.0	ppm	0	0			By-product of drinking water disinfection.

A Note About Smells: We sample regularly for TTHM in homes. Some people who have these compounds in their water may notice a slight change in the taste of their water. We have tested through out drinking and being that some compounds have been detected however the EPA has determined that our water is safe to drink.

We are pleased to provide you drinking water for public consumption in a healthy state. Results of regular monitoring are an indicator of whether or not we detect water quality problems. In an effort to ensure customer satisfaction, we have tested for TTHM and HAA5 in homes. We have tested through out drinking and being that some compounds have been detected however the EPA has determined that our water is safe to drink.

We are pleased to provide you drinking water for public consumption in a healthy state. Results of regular monitoring are an indicator of whether or not we detect water quality problems. In an effort to ensure customer satisfaction, we have tested for TTHM and HAA5 in homes. We have tested through out drinking and being that some compounds have been detected however the EPA has determined that our water is safe to drink.

If you're worried about the health of your water, you can contact your local health department. They can provide you with information on how to protect your water. You can also contact your local health department. They can provide you with information on how to protect your water. You can also contact your local health department. They can provide you with information on how to protect your water.

All contacts of drinking water are subject to natural contamination by substances that are naturally occurring in our water. These substances can be found in natural water and include minerals and various chemicals. The presence of these substances does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by using the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4761.

Some people may be more vulnerable to contaminants in drinking water than the general population. Infants and young children, pregnant women, the elderly, and those with compromised immune systems are more vulnerable. These people should seek advice about drinking water from their health care providers. EPA's Safe Drinking Water Act requires public water systems to provide information to their customers about contaminants and potential health effects that are known to be in their water. This information is available from the Safe Drinking Water Hotline at 1-800-426-4761.

The Big Creek Water Association would like to thank you for your support and help in providing you with clean, safe drinking water. We will continue to work to provide you with clean, safe drinking water, which are the heart of our community, our way of life and our children's future.
