# 2018 CERTIFICATION

## Consumer Confidence Report (CCR)

Homewood WATER Association  
Public Water System Name

620006

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must email, fax (but not preferred) or mail, a copy of the CCR and Certification to the MSDH.** Please check all boxes that apply.

- Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*
  - Advertisement in local paper *(Attach copy of advertisement)*
  - On water bills *(Attach copy of bill)*
  - Email message *(Email the message to the address below)*
  - Other \_\_\_\_\_
- Date(s) customers were informed: 4/17/2019 / / 2019 / / 2019
- CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used \_\_\_\_\_  
Date Mailed/Distributed: \_\_\_\_ / \_\_\_\_ / \_\_\_\_
- CCR was distributed by Email *(Email MSDH a copy)* Date Emailed: \_\_\_\_ / \_\_\_\_ / 2019
  - As a URL \_\_\_\_\_ *(Provide Direct URL)*
  - As an attachment
  - As text within the body of the email message
- CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*  
Name of Newspaper: Scott County Time  
Date Published: 4/17/19
- CCR was posted in public places. *(Attach list of locations)* Date Posted: \_\_\_\_ / \_\_\_\_ / 2019
- CCR was posted on a publicly accessible internet site at the following address: \_\_\_\_\_ *(Provide Direct URL)*

### CERTIFICATION

I hereby certify that the CCR has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the PWS officials by the Mississippi State Department of Health, Bureau of Public Water Supply

Susan Sorey (Secretary)  
Name/Title (Board President, Mayor, Owner, Admin. Contact, etc.)

5-11-19  
Date

### Submission options (Select one method ONLY)

**Mail:** (U.S. Postal Service)  
MSDH, Bureau of Public Water Supply  
P.O. Box 1700  
Jackson, MS 39215

**Email:** [water.reports@msdh.ms.gov](mailto:water.reports@msdh.ms.gov)

**Fax:** (601) 576 - 7800

**\*\*Not a preferred method due to poor clarity\*\***

**CCR Deadline to MSDH & Customers by July 1, 2019!**

2018 Annual Drinking Water Quality Report  
 Homewood Water Association  
 PWS#: 620006  
 April 2019

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Meridian Upper Wilcox aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Homewood Water Association have received lower to moderate rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact David Foreman at 601.536.2729. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Tuesday of each month at 7:00 PM at Homewood Community Building.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2018. In cases where monitoring wasn't required in 2018 the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

*Action Level* - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

*Maximum Contaminant Level (MCL)* - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

*Maximum Contaminant Level Goal (MCLG)* - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

*Maximum Residual Disinfectant Level (MRDL)* - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

*Maximum Residual Disinfectant Level Goal (MRDLG)* - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

*Parts per million (ppm) or Milligrams per liter (mg/l)* - one part per million corresponds to one minute in two years or a single penny in \$10,000.

*Parts per billion (ppb) or Micrograms per liter* - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG/ MRDLG	MCL	Likely Source of Contamination
<b>Inorganic Contaminants</b>								
10. Barium	N	2016*	.0039	.0032 - .0039	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits

13. Chromium	N	2016*	2.1	1.5 – 2.1	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2015/17*	.1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2016*	.359	.335 - .359	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2015/17*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits

### Disinfection By-Products

81. HAA5	N	2018	6	No Range	ppb	0	60	By-Product of drinking water disinfection.
Chlorine	N	2018	.7	.5 - 1	mg/l	0	MDRL = 4	Water additive used to control microbes

\* Most recent sample. No sample required for 2018

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Homewood Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

AFFIDAVIT OF PUBLICATION

State of Mississippi  
County of Scott

On the 7<sup>th</sup> day of May, 2019,

Personally came Charlene Stinson, clerk,  
Of *The Scott County Times*, a weekly newspaper  
established more than twelve months before the date first  
hereinafter mentioned, printed and published in the City  
of Forest, County of Scott, State of Mississippi, before  
Me, the undersigned authority in and for said County,  
Who being duly sworn, deposes and says that a certain

Legal ad,

A copy of which is hereto attached, was published in said

Paper 1 consecutive weeks, to wit:

April 17, 2019  
\_\_\_\_\_, 2019  
\_\_\_\_\_, 2019  
\_\_\_\_\_, 2019

Signed Charlene Stinson

Sworn to and subscribed before me this 8<sup>th</sup> day  
Of May, 2019.

Lee Anne Livingston Palmer  
JLC

LEE ANNE LIVINGSTON PALMER  
CHANCERY CLERK, SCOTT CO., MS  
MY COMMISSION EXPIRES JAN. 6, 2020

## CABINET MAKING

Shelby Bates, a student at the Forest-Scott County Career and Technical Center, received first place honors in the "Cabinet making" competition in the Mississippi SkillsUSA Championships for Region 3 held recently at East Central Community College in Decatur. Also pictured is Wayne Eason, ECCC Director of Career & Technical Education.

## Sign up underway for Electrical Utility Lineman Program

The East Central Community College Workforce Development Center will once again offer a 16-week program in Electrical Utility Lineman beginning August 5, on the Decatur campus.

Those interested in the program should pick up an admissions packet at the ECCC Workforce Development Center by April 19 and return it no later than May 31, 2019. Participants must be at least 18 -years-old and have a high school diploma or high school equivalency certificate.

### 2018 Annual Drinking Water Quality Report Homewood Water Association PWS#: 620006 April 2019

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to let you understand the efforts we make to continually improve the water treatment process and protect our water supply. Our water source is from wells drawing from the Meridian Upper Wilcox aquifer.

The source water assessment has been completed for our public water system to determine the overall quality of the water supply to identify potential sources of contamination. A report containing detailed information on how the assessment was conducted and the results is available for viewing upon request. The wells have received lower to moderate rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact David F. Eason, Director of Public Works. We value our customers to be informed about their water utility. If you want to learn more, please attend our monthly water utility meetings. They are held on the second Tuesday of each month at 7:00 PM at Homewood Community Building.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table reflects the most recent results. As water travels over the surface of land or underground, it can pick up substances or contaminants from the present operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum products and septic systems; radioactive contaminants, which can be naturally occurring or be the result of human activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of some contaminants. All drinking water, including bottled drinking water, may be reasonably expected to contain some contaminants. It's important to remember that the presence of these contaminants in drinking water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you understand the information provided the following definitions:

**Action Level** - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that must be followed.

**Maximum Contaminant Level (MCL)** - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG)** - The "Goal" (MCLG) is the level of a contaminant in drinking water that is expected to pose no risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL)** - The highest level of a disinfectant allowed in drinking water. The addition of a disinfectant is necessary to control microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG)** - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Parts per million (ppm) or Milligrams per liter (mg/l)** - one part per million corresponds to one minute in two hours.

**Parts per billion (ppb) or Micrograms per liter** - one part per billion corresponds to one minute in 2,000 years.

The Electrical Utility-Lineman program is designed to prepare students for entry-level employment in the field of utility power transmission and distribution construction, troubleshooting, and repair. It is a non-credit program.

Prospective students must obtain a CDL Class A learner's Permit with Air Brakes and the National Career Readiness Credential requirement. For more information, contact Chris Clark, workforce development coordinator, at 601-635-6245 or email [clark@eccc.edu](mailto:clark@eccc.edu).

# Celebrity Roast

Honoring  
MPB Executive Director  
**RONNIE AGNEW**

Thursday, April 25, 2019  
Hilton Jackson

Reception 6 pm • Dinner 7 pm

Tickets \$80 each or \$600 for a table of eight  
Call 601-981-3060 or visit  
[www.mspress.org](http://www.mspress.org) to order

Proceeds benefit the internship and scholarship programs of the MPA Education Foundation

## TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG/ MRDLG	MC
-------------	---------------	----------------	----------------	--	------------------	-------------	----

### Inorganic Contaminants

10. Barium	N	2016*	.0039	.0032 - .0039	ppm	2	
13. Chromium	N	2016*	2.1	1.5 - 2.1	ppb	100	
14. Copper	N	2015/17*	.1	0	ppm	1.3	AL
16. Fluoride	N	2016*	.359	.335 - .359	ppm	4	
17. Lead	N	2015/17*	1	0	ppb	0	AL

### Disinfection By-Products

81. HAA5	N	2018	6	No Range	ppb	0	60
Chlorine	N	2018	.7	.5 - 1	mg/l	0	MDRL = 4

\* Most recent sample. No sample required for 2018

As you can see by the table, our system had no violations. We're proud that your drinking water meets requirements. We have learned through our monitoring and testing that some contaminants have been determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results are reported whether or not our drinking water meets health standards. In an effort to ensure systems' compliance, a notification system notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead is primarily from materials and components associated with service lines and home plumbing. Our water is high quality drinking water, but cannot control the variety of materials used in plumbing components. To reduce lead exposure, several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking, cooking, or baby formula. If you are concerned about lead in your water, you may wish to have your water tested. For more information, visit <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory at 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water is expected to contain at least small amounts of some contaminants. The presence of contaminants does not always pose a health risk. More information about contaminants and potential health effects can be obtained by contacting the Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Infants and young children, persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, persons with kidney failure, persons with immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should consult with their health care providers about appropriate means to lessen the risk of infection and whether special precautions are appropriate. EPA/CDC guidelines on appropriate means to lessen the risk of infection and whether special precautions are appropriate are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Homewood Water Association works around the clock to provide top quality water to every tap. We protect our water sources, which are the heart of our community, our way of life and our children's future.
