2018 CERTIFICATION

Consumer Confidence Report (CCR)

Magee's Creek Water Assoc., Inc.

Public Water System Name

740076

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must email, fax (but not preferred) or mail, a copy of the CCR and Certification to the MSDH.** Please check all boxes that apply.

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper *(Attach copy of advertisement)*
- On water bills *(Attach copy of bill)*
- Email message *(Email the message to the address below)*
- Other _____

Date(s) customers were informed: 4 / 18 / 2019 4 / 13 / 2019

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: ____ / ____ / ____

CCR was distributed by Email *(Email MSDH a copy)*

Date Emailed: ____ / ____ / 2019

- As a URL _____ *(Provide Direct URL)*
- As an attachment
- As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: Columbian Progress The Tylenon Times

Date Published: 4 / 13 / 2019 4 / 18 / 2019

CCR was posted in public places. *(Attach list of locations)*

Date Posted: ____ / ____ / 2019

CCR was posted on a publicly accessible internet site at the following address:

_____ *(Provide Direct URL)*

CERTIFICATION

I hereby certify that the CCR has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the PWS officials by the Mississippi State Department of Health, Bureau of Public Water Supply

CCR Deadline to MSDH & Customers by July 1, 2019!

2018 Annual Drinking Water Quality Report
Magee's Creek Water Association, Inc.
PWS#: 740076
April 2019

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies.

Our water source is from wells drawing from the Miocene Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Magee's Creek Water Association, Inc. have received lower rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Travis Marbury at 601.876.4838. We want our valued customers to be informed about their water utility. If you want to learn more, please join us at any of our regularly scheduled meeting that will be held on the second Thursday of May at 7:00 PM at the corporate office located at 515 Manning's Crossing Road, Tylertown, MS 39337.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2018. In cases where monitoring wasn't required in 2018, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL/MRDL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
10. Barium	N	2018	.0273	.0209 - .0273	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
19. Nitrate (as Nitrogen)	N	2018	.44	.39 - .44	ppm	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Disinfection By-Products								
Chlorine	N	2018	1.4	1.2 – 1.5	ppm	0	MRDL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2018.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Magee's Creek Water Association, Inc. works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

2018 Annual Drinking Water Quality Report

Magpie's Creek Water Association, Inc.
 PWS ID #740076
 April, 2018

We're pleased to present to you, the year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to consistently improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best asset.

Your water source is from wells drawing from the Magpie Aquifer. The source water assessment has been completed for our public water system to determine the overall responsibility of the drinking water supply to identify potential sources of contamination. A report is available for public information on how the responsibility determination was made that has been transmitted to our public water system for their review and response. The table for the Magpie's Creek Water Association, Inc., has included their findings in terms of responsibility to consumers.

If you have any questions about this report or concerning your water utility, please contact Tracey Mulford at 601.277.6288. We want our valued customers to be informed about their water utility. If you need to learn more, please join us at one of our regularly scheduled meetings that will be held on the second Thursday of May at 7:00 PM at the corporate office located at 915 Maryland's Crossing Road, Therman, MS 38687.

We proudly report for consumers in your drinking water according to Federal and State laws. The table below lists all of the drinking water contaminants that were detected during the period of January 1 to December 31, 2018. It comes when monitoring equipment is installed in 2018, the table includes the most recent results. As water travels over the surface of land or underground, it dissolves

CALENDAR

attend the Air Force Academy near Colorado Springs, Colo... He graduated from Columbia High School and received a scholarship in hand to Peard River Junior College.

50 years ago, April 10, 1969

The second of Columbia Bank's two presidents is beginning his 31st year at the bank and is preparing for the 70th anniversary of the bank in August. It is unusual for a banking institution of this length of time to have had only two presidents.

Thad R. Lampton Jr. came to Columbia in March of 1939 to become a vice president of the county's oldest bank. He succeeded his uncle, the late William Lampton moved with his family to Jackson in this child-hood. He attended Peard River School, a prep school in Paulding, N.Y., and received his B.S. degree in economics at the University of Virginia and did postgraduate work at Harvard University Business School. He became affiliated with Lampton Brothers store in Tylerport in 1933 and the following year was elected president. With 30 years in the bank, President Lampton heads the list of officers who average almost 18.5 years service. Other officers and years of bank service are Joe E. Hisey, vice president, 23 years; W. Dean Noblett, vice president and cashier, 12 years; Louis F. Barretts, vice president and assistant cashier, eight years.

Telephone calls to The Columbia-Progress Tuesday from the offices of Representative William M. Colmer and Senator John Stearns advised that the initial grant for the proposed Winter Park on Pearl River at Columbia has been approved. The grant is for \$45,920 and is from the Land and Water Conservation Fund, Bureau of Outdoor Recreation, Department of Interior, and is to the Pearl River Basin Development District, according to the information from Washington. Involved in the initial grant is the acquisition of 2.5 acres of land and the development of the winter park, which will

New Hope Baptist Church
Easter Drama, April 14
 New Hope Baptist Church invites you to the Easter Drama, "The Road to Calvary," at 7 p.m. on Sunday, April 14.

Water meter repair, no permit required, \$15.00									

As you can see by the table, our system had no violations. We're proud that your utility water meets or exceeds all Federal and State requirements. We've earned through our monitoring and testing that your water has been subjected to the EPA's best determined best water test. It's SAFE at these levels.

We are required to monitor your drinking water for growth contaminants on a monthly basis. Results of higher monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems compliance all monitoring requirements, MCHS has installed systems of any remaining violations prior to the end of the compliance period.

In general, elevated levels of lead can cause various health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for protecting high quality drinking water, but cannot control the levels of materials used in plumbing components. When your water has been sitting for several hours, you can reduce the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Home testing kits are available at most hardware stores. For more information on lead in drinking water, visit the U.S. Environmental Protection Agency's lead website at www.epa.gov/lead.

All systems of drinking water are subject to seasonal contamination by substances that are naturally occurring or man made. These substances can be inorganic, organic, or synthetic in nature. Some of these substances are: nitrate, nitrite, and ammonia. These may occasionally be detected in the water from a health risk. More information about contaminants and potential health effects can be obtained by visiting the Environmental Protection Agency's Safe Drinking Water website at www.epa.gov/sdw.

Some people may be more vulnerable to contaminants in drinking water than the general population. Infants and young children, pregnant women, and the elderly are particularly vulnerable. People with kidney disease, certain immune system deficiencies, certain cancer treatments, recent gallbladder surgery, and certain medications may also be more vulnerable to contaminants in drinking water. Some people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on drinking water to lower the risk of infection by Cryptosporidium and other disease-causing parasites from the Safe Drinking Water Act (SDWA) are available at www.epa.gov/sdw.

The Michigan Clean Water Association, Inc. works around the clock to provide you quality water to enjoy. We ask that all our customers help us protect our water resources, which are the heart of our community, our way of life and our children's future.
