

2018 CERTIFICATION

Consumer Confidence Report (CCR)

Pine Haven Mobile Home Village
Public Water System Name

0240195

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must email, fax (but not preferred) or mail, a copy of the CCR and Certification to the MSDH.** Please check all boxes that apply.

- Customers were informed of availability of CCR by: (*Attach copy of publication, water bill or other*)
 - Advertisement in local paper (*Attach copy of advertisement*)
 - On water bills (*Attach copy of bill*)
 - Email message (*Email the message to the address below*)
 - Other _____

Date(s) customers were informed: ___ / ___ / 2019 ___ / ___ / 2019 ___ / ___ / 2019

- CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: ___ / ___ / _____

- CCR was distributed by Email (*Email MSDH a copy*) Date Emailed: ___ / ___ / 2019
 - As a URL _____ (*Provide Direct URL*)
 - As an attachment
 - As text within the body of the email message

- CCR was published in local newspaper. (*Attach copy of published CCR or proof of publication*)

Name of Newspaper: _____

Date Published: ___ / ___ / _____

- CCR was posted in public places. (*Attach list of locations*) Office ^{on-site} Date Posted: 5 / 22 / 2019

- CCR was posted on a publicly accessible internet site at the following address: _____
(*Provide Direct URL*)

CERTIFICATION

I hereby certify that the CCR has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the PWS officials by the Mississippi State Department of Health, Bureau of Public Water Supply

CCR Deadline to MSDH & Customers by July 1, 2019!

2018 Annual Drinking Water Quality Report
Pine Haven Mobile Home Village
PWS#: 0240195
May 2019

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies. Our water source is from wells drawing from the Grahams Ferry Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Pine Haven Mobile Home Village have received lower rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Kimberly Woodward, Property Manager at 228.392.0510. We want our valued customers to be informed about their water utility. Report will be posted on bulletin board at office.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2018. In cases where monitoring wasn't required in 2018 the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL/MRDL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
10. Barium	N	2018	.0254	No Range	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2018	.5	No Range	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2015/17*	0	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

16. Fluoride	N	2018	.18	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2015/17*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Disinfection By-Products								
81. HAA5	N	2018	3	No Range	ppb	0	60	By-Product of drinking water disinfection.
Chlorine	N	2018	1.1	.5 – 1.3	mg/l	0	MRDL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2018.

Significant Deficiencies

During a sanitary survey conducted on 3/25/2015, the Mississippi State Department of Health cited the following significant deficiency(s).

Inadequate follow up on previous deficiencies

During a sanitary survey conducted on 3/08/2018, the Mississippi State Department of Health cited the following significant deficiency(s).

Inadequate Pump Capacity

Corrective actions: This system is under a bilateral compliance agreement to have corrective actions completed by 4/30/2020.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Pine Haven Mobile Home Village works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

2018 Annual Drinking Water Quality Report The Home Mobile Home Village PHOENIX, AZ 85020 May 2019

We are pleased to present to you this year's Annual Quality Water Report. This report is compiled to inform you about the quality water and services we offer to the mobile home. Our primary goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the why's and how's of our water treatment process and the quality of our water. We are committed to providing you with information to help you understand the quality of our water.

The current water treatment has been completed for our mobile water system to improve the overall acceptability of its drinking water supply to meet the highest standards of acceptability. A report containing detailed information on how the water treatment process has been completed is available for your review upon request. The water for The Home Mobile Home Village has been tested and certified to meet the highest standards of acceptability.

As a result of our water treatment process, the water quality is improved and the water is safe to drink. The water is tested for a variety of contaminants to ensure that it meets the highest standards of acceptability.

Water Level: The concentration of a contaminant, if present, is higher than the level of a contaminant in drinking water. There is continuing concern that this action may be necessary to protect public health.

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. MCLs are set to protect the public health. MCLs are set for a range of safety.

Maximum Contaminant Level Goal (MCLG): The highest level of a contaminant that is allowed in drinking water. MCLGs are set to protect the public health. MCLGs are set for a range of safety.

Public Water System (PWS): A public water system is defined as a community water supply system that regularly serves at least 15 connections or at least 25 people or at least 15 acres of land.

Contaminant	Sample No.	Date Collected	Level Detected	Range of Detection of Samples (Reporting MCL/MCLG)	MCL	MCLG	Unit	Notes/Source of Contamination
Inorganic Contaminants								
Aluminum	N	2018	0.04	No Range	0.05	0	mg/L	Discharge of drilling water, discharge from metal refineries, erosion of natural deposits.
Chlorine	N	2018	0	No Range	0	0	mg/L	Discharge from food and feed processing, erosion of natural deposits.
Lead	N	2018/17	0	0	0.01	0.01	mg/L	Corrosion of household plumbing systems, erosion of natural deposits, leaching from metal products.

Fluoride	N	2018	1.0	No Range	4.0	4.0	mg/L	Excess of natural deposits, water treatment which produces fluoride, discharge from fertilizer and pharmaceutical facilities.
Cadmium	N	2018/17	0	0	0.01	0	mg/L	Corrosion of household plumbing systems, erosion of natural deposits.

Disinfection By-Products								
Trihalomethanes	N	2018	0	No Range	0.1	0	mg/L	By-product of drinking water disinfection.
Chlorine	N	2018	1.1	0 - 1.3	1.0	0	mg/L	By-product of drinking water disinfection.

Significant Disinfection By-Products
 Chlorine is a disinfection by-product. Chlorine is used to disinfect water. Disinfection by-products are formed when chlorine reacts with natural organic matter in water. Disinfection by-products are not harmful to health. Disinfection by-products are not harmful to health. Disinfection by-products are not harmful to health.

Some people may be more sensitive to contaminants in drinking water than the general population. Immunocompromised persons such as persons with kidney, liver, or heart disease, pregnant women, and infants are more sensitive to contaminants in drinking water. These people should take extra precautions to protect their health. These people should take extra precautions to protect their health. These people should take extra precautions to protect their health.
