2018 CERTIFICATION

Consumer Confidence Report (CCR)

Pine Street Water Asso.

Public Water System Name

0030006

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must email, fax (but not preferred) or mail, a copy of the CCR and Certification to the MSDH.** Please check all boxes that apply.

- Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*
 - Advertisement in local paper *(Attach copy of advertisement)*
 - On water bills *(Attach copy of bill)*
 - Email message *(Email the message to the address below)*
 - Other _____

Date(s) customers were informed: 6/13/2019 / / /2019

- CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: ___ / ___ / ___

- CCR was distributed by Email *(Email MSDH a copy)* Date Emailed: ___ / ___ /2019
 - As a URL _____ *(Provide Direct URL)*
 - As an attachment
 - As text within the body of the email message

- CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: Southern Herald

Date Published: 6/13/2019

- CCR was posted in public places. *(Attach list of locations)* Date Posted: ___ / ___ /2019

- CCR was posted on a publicly accessible internet site at the following address: _____ *(Provide Direct URL)*

CERTIFICATION

I hereby certify that the CCR has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the PWS officials by the Mississippi State Department of Health, Bureau of Public Water Supply

Robert J. Payne

****Not a preferred method due to poor clarity****

CCR Deadline to MSDH & Customers by July 1, 2019!

Inorganic Contaminants								
10. Barium	N	2018	.0408	No Range	Ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
14. Copper	N	2017*	0	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2018	.404	No Range	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2017*	0	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
19. Nitrate (as Nitrogen)	N	2018	.62	No Range	ppm	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Disinfection By-Products								
Chlorine	N	2018	1.1	1 – 1.2	ppm	0	MDRL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2018.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

Significant Deficiencies – Town of Gloster

Monitoring and Reporting of Compliance Data Violations:

During a sanitary survey conducted on 2/12/2015, the Mississippi State Department of Health cited the following significant deficiency(s):

Inadequate application of treatment chemicals and techniques (primacy MCLs)

Corrective Actions: This system is out of compliance and subject to enforcement action.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Pine Street Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future. The CCR will be available at the Gloster Library.

PROOF OF PUBLICATION

STATE OF MISSISSIPPI

COUNTY OF AMITE

PERSONALLY CAME before me, the undersigned, a notary public in and for the state aforesaid, the

Annual Drinking Water Quality Report
Pine Street Water Association
PWS ID#: 0030006
MAY 2019

This report is designed to inform you about the quality water and services we deliver to you every day. Our goal is to provide you with safe drinking water. We want you to understand the efforts we make to continually improve the water treatment process and the quality of our water. Our water source is purchased from the Town of Gloster that has wells drawing from the Miocene

to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. The information that has been furnished to our public water system and is available for viewing upon request.

Please contact Bobby Payne at 601.639.5180. We want our valued customers to be informed about their water quality on the second Tuesday of the month at 5:30 PM at Gloster Public Library.

This table below lists all of the drinking water contaminants that were detected during the 2018 sampling period. If a contaminant wasn't required in 2018, the table reflects the most recent results. As water travels over the surface of the earth, it can pick up substances or contaminants from the presence of animals or from natural sources such as agriculture, urban storm-water run-off, industrial, or domestic wastewater discharges; oil and gas production from urban storm-water run-off, industrial, or domestic wastewater discharges; oil and gas production from agricultural sources such as agriculture, urban storm-water run-off, and residential uses; organic chemical products of industrial processes and petroleum production, and can also come from gas stations and septic systems. All drinking water, including bottled drinking water, may be reasonably expected to contain some of these constituents. Remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

To help you better understand these terms we've provided the following definitions:

MCL - Maximum Contaminant Level: A treatment or other requirements which a water system must follow to ensure that the concentration of a contaminant does not exceed the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as practicable.

MCLG - Maximum Contaminant Level Goal: A contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

MRDLG - Maximum Residual Disinfectant Level Goal: A disinfectant level in drinking water below which there is no known or expected risk of health. MRDLGs do not reflect the additional health margin provided by the disinfectant.

Rate of Disinfection - The rate at which a disinfectant kills microorganisms. It is expressed as the number of log units of microorganisms that are killed per minute in two years or a single penny in \$10,000.

MCLG	MCL	Likely source of Contamination
2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
0	AL=15	Corrosion of household plumbing systems; erosion of natural deposits
10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits

MCLG	MCL	Likely source of Contamination
0	MDRL=4	Water additive used to control microbes

that your drinking water meets or exceeds all Federal and State requirements. We have learned from the EPA that your water is safe at these levels. Results of regular monitoring are an indicator of whether or not our drinking water meets the requirements. MSDH now notifies systems of any missing samples prior to the end of the compliance period. Lead in drinking water is primarily from materials and components that are responsible for providing high quality drinking water, but cannot control the variety of materials used in the distribution system. Lead can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before you use the water for drinking, cooking, or eating. Information on lead in drinking water, testing methods, and other information is available at <http://www.epa.gov/lead>.

undersigned agent of THE SOUTHERN HERALD, a newspaper published in the Town of Liberty, Amite County, Mississippi, who, being duly sworn, deposes and says that THE SOUTHERN HERALD is a newspaper as defined and prescribed in Section 13-3-3, Mississippi Code of 1972, and that the publication of
