2018 CERTIFICATION

Consumer Confidence Report (CCR)

Sardis Lake Comm Water

Public Water System Name

54 0063

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must email, fax (but not preferred) or mail, a copy of the CCR and Certification to the MSDH.** Please check all boxes that apply.

- Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*
 - Advertisement in local paper *(Attach copy of advertisement)*
 - On water bills *(Attach copy of bill)*
 - Email message *(Email the message to the address below)*
 - Other _____

Date(s) customers were informed: 5/31/2019 / /2019 / /2019

- CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: / /

- CCR was distributed by Email *(Email MSDH a copy)* Date Emailed: / /2019
 - As a URL _____ *(Provide Direct URL)*
 - As an attachment
 - As text within the body of the email message

- CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: The Panolion

Date Published: 5/31/19

- CCR was posted in public places. *(Attach list of locations)* Date Posted: / /2019

- CCR was posted on a publicly accessible internet site at the following address: _____ *(Provide Direct URL)*

CERTIFICATION

I hereby certify that the CCR has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the PWS officials by the Mississippi State Department of Health, Bureau of Public Water Supply

CCR Deadline to MSDH & Customers by July 1, 2019!

2018 Annual Drinking Water Quality Report
 Sardis Lake Community Water Association
 PWS#: 0540063
 May 2019

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

If you have any questions about this report or concerning your water utility, please contact M. Earlene Brewer at 662-563-2709. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Monday of each month at 7:00 PM at the First Faith Baptist Church.

Our water source is from wells drawing from the Middle Wilcox Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Sardis Lake Community Water Association have received lower to moderate susceptibility rankings to contamination.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during the period of January 1st to December 31st, 2018. In cases where monitoring wasn't required in 2018, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS

| Contaminant | Violation Y/N | Date Collected | Level Detected | Range of Detects or # of Samples Exceeding MCL/ACL | Unit Measure -ment | MCLG | MCL | Likely Source of Contamination |
|-------------|---------------|----------------|----------------|--|--------------------|------|-----|--------------------------------|
|-------------|---------------|----------------|----------------|--|--------------------|------|-----|--------------------------------|

Inorganic Contaminants

| | | | | | | | | |
|--------------|---|----------|-------|---------------|-----|-----|--------|--|
| 10. Barium | N | 2018 | .0134 | .0087 - .0134 | ppm | 2 | 2 | Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits |
| 13. Chromium | N | 2018 | 1.1 | .8 - 1.1 | ppb | 100 | 100 | Discharge from steel and pulp mills; erosion of natural deposits |
| 14. Copper | N | 2015/17* | .1 | 0 | ppm | 1.3 | AL=1.3 | Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives |
| 17. Lead | N | 2015/17* | 1 | 0 | ppb | 0 | AL=15 | Corrosion of household plumbing systems, erosion of natural deposits |

Disinfection By-Products

| | | | | | | | | |
|----------|---|-------|---|----------|------|---|----------|--|
| 81. HAA5 | N | 2016* | 2 | No Range | ppb | 0 | 60 | By-Product of drinking water disinfection. |
| Chlorine | N | 2018 | 1 | .7 - 1.7 | mg/l | 0 | MDRL = 4 | Water additive used to control microbes |

* Most recent sample. No sample required for 2018.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Sardis Lake Community Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

Publisher's Certificate of Publication

STATE OF MISSISSIPPI COUNTY OF PANOLA

Delia Childers, being duly sworn, on oath says she is and during all times herein stated has been an employee of Batesville Newsmedia publisher and printer of the The Panolian (the "Newspaper"), has full knowledge of the facts herein stated as follows:

2018 Annual Drinking Water Quality Report
Sardis Lake Community Water Association
PWS# 05-0533
May 2019

1. The Newspaper printed the copy of the matter attached hereto (the "Notice") was copied from the columns of the Newspaper and was printed and published in the English language on the following days and dates:

05/31/19

2. The sum charged by the Newspaper for said publication is the actual lowest classified rate paid by commercial customer for an advertisement of similar size and frequency in the same newspaper in which the Notice was published.

3. There are no agreements between the Newspaper, publisher, manager or printer and the officer or attorney charged with the duty of placing the attached legal advertising notice whereby any advantage, gain or profit accrued to said officer or attorney

SARDIS LAKE COMMUNITY WATER
P.O. BOX 1115
BATESVILLE MS 38606

We're pleased to present to you this year's Annual Water Quality Report. It's a report a caregiver to inform you and if the quality water and standards we deliver to you every day. Our number goal is to provide you with a safe and dependable supply of drinking water. We enter you to understand the areas we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the safety of your water.

If you have any questions about this report or concerning your water utility, please contact M. Julie Green at 662-369-2119. We want our best customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the 1st Monday of each month at 7:00 PM at the First Faith Baptist Church.

Our water source is from wells drawing from the Middle Miocene Aquifer. The source water protection has been completed for our public water system to determine the overall safety, ability of its drinking water supply to meet its potential uses of consumption. Annual monitoring is required. Information on the Sardis Lake Community Water Association has revealed lower to moderate susceptibility to various contaminants.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2018. In cases where monitoring was conducted in 2018, the table reflects the most recent results. As water flows over the surface of any or under ground, it detaches naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activities. Mineral contaminants, such as nitrates and bacteria, that may come from sewage treatment plants, effluent systems, agricultural fertilizers, operations, and soil; for organic contaminants, this includes: nitrate, nitrite, nitrite, pesticides and herbicides, which may come from a variety of sources such as agricultural practices, oil and petroleum products, household chemicals, including synthetic and natural organic chemicals, which are by-products of industrial processes, and certain natural gas products and natural gas systems. In order to ensure that the water is safe to drink, EPA has established maximum contaminant levels in water provided by public water systems. An drinking water quality report is required to ensure that the water is safe to drink. At least, a small amount of some contaminants. It's important to remember that if the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In the table you will find many terms and abbreviations you might not be familiar with. To help you better understand it we have included the following definitions:

Action Level - The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is growing evidence that addition of a disinfectant is necessary to control microbial contamination.

Maximum Lead Level Goal (MALLG) - The level of a drinking water disinfectant below which there is no known or expected risk to health. MALLGs do not reflect the benefits of the use of disinfectants to control microbial contamination.

Parts per million (ppm) or Milligrams per liter (mg/L) - one part per million corresponds to one milliliter in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter (µg/L) - one part per billion corresponds to one milliliter in 2,000 years or a single penny in \$10,000,000.

| TEST RESULTS | | | | | | | | |
|---------------------------------|-----------|----------------|----------------|------------------------------|------------------|------|-------|--|
| Contaminant | Violation | Date Collected | Level Detected | Range of Orders of Magnitude | Unit Measurement | MCLG | MCL | Lead Source/Contaminant |
| Inorganic Contaminants | | | | | | | | |
| 10. Selenium | N | 2018 | 0.131 | 0.087 - 0.154 | ppm | 2 | 2 | Discharge of drilling wastes, discharge from metal refineries, erosion of natural materials |
| 12. Chloride | N | 2018 | 1.1 | 0 - 1.1 | ppm | 100 | 100 | Discharge from steel and pulp mills, erosion of natural deposits |
| 14. Copper | N | 2018-1* | 1 | 0 | ppm | 1.3 | AL-13 | Discharge of industrial effluents, erosion of natural deposits, leaching from metal refineries |
| 17. Lead | N | 2018-1* | 1 | 0 | ppm | 0 | AL-15 | Discharge of industrial effluents, erosion of natural deposits |
| Disinfection By-Products | | | | | | | | |
| 81. THM5 | N | 2018* | 2 | No Range | ppm | 0 | 0 | By-Product of drinking water disinfection |
| Chlorine | N | 2018 | 1 | 1 - 1.7 | mg/L | 1 | MJL | Water addition leads to natural microbes |

*Most recent sample. No sample reported for 2018.

As you can see by the table, our system had no violations. We're glad that your drinking water meets or exceeds all Federal and State requirements. Our home treatment through our monitoring and testing that some contaminants have been detected. However, the EPA has determined that your water is SAFE.

We're required to monitor your drinking water for lead in certain areas of the state. Results of regular monitoring are available on our website or you can call 662-369-2119. In order to ensure systems are safe and compliant with the lead in drinking water, MRDL is set at 0.01 mg/L.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is most likely to come from old pipes and solder joints in your home and from plumbing. Our water system is responsible for providing the quality drinking water, but cannot control the quality of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds at 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you can also use our water filter. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available on the Safe Drinking Water Hotline or at <http://www.epa.gov/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 662-378-7582 if you wish to have your water tested.

A concern of drinking water can affect the percent of contaminants by which you are exposed. In some cases, people with kidney disease, liver disease, or other health conditions may be more susceptible to contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-6276.

Some people may be more susceptible to contaminants in drinking water than the general population. In some cases, people with kidney disease, liver disease, or other health conditions may be more susceptible to contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-6276.

The Sardis Lake Community Water Association works around the clock to provide the highest quality water to every tap. We ask that our customers help us protect our water sources, which are the heart of our community, the way of life and our children's future.

Lop off these locks, I've got a job

Community Columnist

Sherry Hopkins
Community Columnist

When it came right down to it, it was all about vanity. My vanity. And just so you know I don't consider myself vain, I know your argument would be that I have written a column about myself and my world for 15 years. So touche'.

Let me explain. The impetus for my vanity, or the final straw as it were, was the need for a haircut. It was more than a need, it had become an obsession.

Early on in this unmarked road adventure Dear Don and I have found ourselves on I decided to cut haircuts out of our budget. I could save hundreds of dollars a year by

fixing that little detail. It turns out that little detail was bigger and more important than I had imagined.

My hair started to grow and as it did it not only grew longer but thicker. As one ages one usually has thinning hair. I can attest to that not being so for everyone. In fact there is not a single thinning molecule, cell, hair or anything else on my body.

I was OK with the longer locks for a bit but as the outside temps rose so did my discomfort.

I kept telling myself that I could now wear my hair in so many different styles. I could put it in a ponytail which I was certain would make me look younger. I could scrunch it up with some type of holder or combs. I could go for the messy sexy look. I can't tell you right out of the gate that one was not meant for me.

I could wear it down laying on my shoulders in long grey luscious locks. That did not happen

either. I looked like a vagabond and old gypsy lady. I looked unkempt.

And then there was the constant fiddling with it. I have always been the girl who looked in the mirror once in the morning and never looked back again. I did not and do not want to fiddle with my hair or clothes or shoes or anything else for that matter.

If I deemed myself presentable to the world first thing in the morning then the world got me that way all day.

Does that sound like vanity? No, dear reader, it does not.

But despite days in the past 2 1/2 years of financial worry, counting slices of bread to see if there was enough to make it to grocery day, (not really, but sort of), staying at home to conserve car fuel, and limiting every single item in our lives that wasn't necessary, I caved.

Not because of the lack of Hostess orange cup cakes or boxes of Junior Mints or even the threat of losing the Internet. I caved

because my hair had gotten so long that it was now uncomfortable.

So that was the thrust for getting a job. I badly needed a haircut. I wanted to walk outside and have the wind have it's way with my hair without worry. I wanted to walk away one again from the mirror. I wanted it off my sweaty neck and out of my way. Foyntall be damned, I wanted my hair cut.

Now I am once again gainfully employed. At the very moment I was told I was hired, I walked next door and got my first haircut in seven long months. I rejoiced as the unkempt me turned into the no mirror needed me.

I will keep this job until eternity just to be able to get a regular haircut.

Now I will concede that THAT my friends is VANITY. The Good Book says all is vanity. Works for me!

Stay tuned.

Contact Sherry at slusac6@gmail.com or 662.563.2525.

Northwest vice president's list Panola students

NEWS RELEASE

The Vice President's List for the Spring 2019 semester at Northwest Mississippi Community College has been released by college officials.

The Vice President's List includes students completing a minimum of 12 semester hours with a 3.50 to 3.74 average. Among those Panola County students named to the Spring 2019 Vice President's list are:

- Nathaniel Sorokurs, Drake Appleton of Batesville, Lauren Brock, Tammye Campbell, Whitman Correro, Brianna Daniel, Meghan Gee, Holden Gurley, Sharish Haygood, Nyasha Hill, Emily Houston, Julie Houston, Sarah Johnson, Robert Lipscomb, Lucas Oakley, Bryce Robinson, John Still, and Valerie Wicks.

Northwest names spring President's List students

NEWS RELEASE

The President's List for the Spring 2019 semester at Northwest Mississippi Community College has been released by college officials. The President's List includes students completing a minimum of 12 semester hours with a 3.75 to 4.0 grade point average.

Among those from Panola County named to the Spring 2019 President's List are:

- Marybeth Armulidge, Camille Brumder, Jonathon Berryhill, Carlyn Belker, Bailey Bridges, Jerronica Brown, Laerin Burton, Kosha Butts, Brian Cobb, Carly Coleman, Hannah Deloach, John Forrest Franklin, Madison Gant, Andrea Gonzalez, Cassie Gray, Susan Guntharp, Trevor Hawthorne, Matthew Herron, Jase Howell, Justin Hudson, Karrah Hudson, Jennetta Jackson, Victoria Jankowski, Taylor Jaudon, Bart Johnson, Shanika Johnson, Mirandas Jonesm Alex Lambert, Katelynn McCachren, Annabelle McCrie, Katie McCulley, Cla Moore, Joannie Olson, Gregory Orman, Audrey Parker, Brianna Pittman, Cheryl Polk, Matthew Price, Kierra Pride, Courtney Roach, Tamiqua Rogers, Carrington Sanford, Sherron Sanford, Joshua Saralvarez, Mary Shepard, James Simmons, Patra Smith, Krista Still, Jessica Swindoll, Meredith Tidwell, Hilda Tucker, Brianna Tutor, Paula Washington, John Washington, Johnny Watson, Hannah Welch, Briann Wilkes, Katie Williams, and Nichelle Wilson.

Obituaries

James Belk Griffin, Sr.

James Belk Griffin, Sr., 82, passed away at Panola Medical Center in Batesville Wednesday, May 29, 2019. James was born June 3, 1936, to the late Geraldine Belk and Clyde Edward Griffin in Calhoun. During his lifetime he was self-employed and honorably served his country in the U.S. Army.

James loved to build birdhouses, along with other carpentry work, fishing, and going out on the lake. He also enjoyed to go camping in his Army tent and spending time outside. He was a prankster and always had a good sense of humor.

James and his wife, Helen, attended Hebron Baptist Church.

Those he leaves behind to cherish his memory include his wife, Helen Griffin of Sardis; three sons, Michael Griffin (Donna) of Coldwater, Ronald Griffin (Christy) of Sardis, and Donald Griffin (Renee) also of Sardis; two sisters, Virgie Flowers of Clarksdale and Betty Frazer of Batesville; four grandchildren, Anthony Griffin, Nathan Griffin, Nicholas Griffin, and Dean Griffin; a great-grandson, Michael Griffin; five step-grandchildren and 11 step-great grandchildren.

Along with his parents he is preceded in death by one son, James Belk Griffin, Jr.; a grandson, Bryan Griffin; a step-great grandson, Dylan Gallagher, and two broth-

Naomi Carolyn Hall

Naomi Carolyn Hall, 72, died Sunday, May 26, 2019, at the Baptist Memorial Hospital in Oxford.

Funeral services were held Monday, May 27, in the Martin Willingham Memorial Chapel of Wells Funeral Home with Interment Jumpsers Chapel Cemetery in Water Valley.

She was born Sept. 30, 1946, in Forest City, Ark., to the late Herbert and Ina Mae Crouse Brown. She was a waitress and personal caregiver throughout her life. She was a member of Hope Church of God.

James Garrett May

James Garrett May, 27, of Senatobia, passed away May 25, 2019. He is survived by his parents, Gary May (Anne) of Senatobia and Amy Clay (Robert) of Coldwater; a sister, Maggie May of Senatobia; a brother, Baylor May (LeShonda) of Hernando; grandparents, James and Frances May of Senatobia, Kay Long of Como, and Charles Skelton of Coldwater; aunts, Jil McKellar (Walt) of Senatobia, Cindy Morehead (Brian) of Hot Springs, Ark., Mary Margaret Panduro (Renee) of Como, and Melissa Bateman (Matt) of Watkinsville, Ga.; a niece

Willie B. McDonald

Willie B. McDonald, 73, died Sunday, May 26, 2019, at Baptist Memorial Hospital of North MS in Oxford.

Funeral services were held Tuesday, May 28, at Black Jack Baptist Church with interment at Forrest Memorial Park in Batesville.

James Belk Griffin, Sr.

James Belk Griffin, Sr., 82, passed away at Panola Medical Center in Batesville Wednesday, May 29, 2019. James was born June 3, 1936, to the late Geraldine Belk and Clyde Edward Griffin in Calhoun. During his lifetime he was self-employed and honorably served his country in the U.S. Army.

James loved to build birdhouses, along with other carpentry work, fishing, and going out on the lake. He also enjoyed to go camping in his Army tent and spending time outside. He was a prankster and always had a good sense of humor.

James and his wife, Helen, attended Hebron Baptist Church.

Those he leaves behind to cherish his memory include his wife, Helen Griffin of Sardis; three sons, Michael Griffin (Donna) of Coldwater, Ronald Griffin (Christy) of Sardis, and Donald Griffin (Renee) also of Sardis; two sisters, Virgie Flowers of Clarksdale and Betty Frazer of Batesville; four grandchildren, Anthony Griffin, Nathan Griffin, Nicholas Griffin, and Dean Griffin; a great-grandson, Michael Griffin; five step-grandchildren and 11 step-great grandchildren.

Along with his parents he is preceded in death by one son, James Belk Griffin, Jr.; a grandson, Bryan Griffin; a step-great grandson, Dylan Gallagher, and two broth-

James Belk Griffin, Sr., 82, passed away at Panola Medical Center in Batesville Wednesday, May 29, 2019. James was born June 3, 1936, to the late Geraldine Belk and Clyde Edward Griffin in Calhoun. During his lifetime he was self-employed and honorably served his country in the U.S. Army.

James loved to build birdhouses, along with other carpentry work, fishing, and going out on the lake. He also enjoyed to go camping in his Army tent and spending time outside. He was a prankster and always had a good sense of humor.

James and his wife, Helen, attended Hebron Baptist Church.

Those he leaves behind to cherish his memory include his wife, Helen Griffin of Sardis; three sons, Michael Griffin (Donna) of Coldwater, Ronald Griffin (Christy) of Sardis, and Donald Griffin (Renee) also of Sardis; two sisters, Virgie Flowers of Clarksdale and Betty Frazer of Batesville; four grandchildren, Anthony Griffin, Nathan Griffin, Nicholas Griffin, and Dean Griffin; a great-grandson, Michael Griffin; five step-grandchildren and 11 step-great grandchildren.

Along with his parents he is preceded in death by one son, James Belk Griffin, Jr.; a grandson, Bryan Griffin; a step-great grandson, Dylan Gallagher, and two broth-

Naomi Carolyn Hall

Naomi Carolyn Hall, 72, died Sunday, May 26, 2019, at the Baptist Memorial Hospital in Oxford.

Funeral services were held Monday, May 27, in the Martin Willingham Memorial Chapel of Wells Funeral Home with Interment Jumpsers Chapel Cemetery in Water Valley.
