2018 CERTIFICATION

Consumer Confidence Report (CCR)

East Pike Water Association

Public Water System Name

MS0570051

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. You must email, fax (but not preferred) or mail, a copy of the CCR and Certification to the MSDH. Please check all boxes that apply.

Customers were informed of availability of CCR by: *(Attach copy of publication, water bill or other)*

- Advertisement in local paper *(Attach copy of advertisement)*
- On water bills *(Attach copy of bill)*
- Email message *(Email the message to the address below)*
- Other _____

Date(s) customers were informed: 5 / 29 / 2019 / / / 2019 / / / 2019

CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: _____ / _____ / _____

CCR was distributed by Email *(Email MSDH a copy)* Date Emailed: _____ / _____ / 2019

- As a URL _____ *(Provide Direct URL)*
- As an attachment
- As text within the body of the email message

CCR was published in local newspaper. *(Attach copy of published CCR or proof of publication)*

Name of Newspaper: Enterprise-Journal

Date Published: 6 / 22 / 2019

CCR was posted in public places. *(Attach list of locations)* Date Posted: _____ / _____ / 2019

CCR was posted on a publicly accessible internet site at the following address: _____ *(Provide Direct URL)*

CERTIFICATION

I hereby certify that the CCR has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the PWS officials by the Mississippi State Department of Health, Bureau of Public Water Supply

CCR Deadline to MSDH & Customers by July 1, 2019!

Annual Drinking Water Quality Report

East Pike Water Association, Inc.
PWS #MS0570051
2018 Report
June 22, 2019

Is my water safe?

We are pleased to present this year's Annual Water Quality Report (Consumer Confidence Report) as required by the Safe Drinking Water Act (SDWA). This report is designed to provide details about where your water comes from, what it contains, and how it compares to standards set by regulatory agencies. This report is a snapshot of last year's water quality. We are committed to providing you with information because informed customers are our best allies.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Water Drinking Hotline (800-426-4791).

Where does my water come from?

Our water source is from 2 wells using water from the Miocene Aquifer.

Source water assessment and its availability

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. The general susceptibility rankings assigned to each well of this system are provided immediately below. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the East Pike Water Association have received a moderate susceptibility ranking to contamination.

Why are there contaminants in my drinking water?

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's (EPA) Safe Drinking Water Hotline (800-426-4791). The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity:

microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm water runoff, and residential uses; organic Chemical Contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems; and radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

How can I get involved?

If you have questions about this report or concerning your water utility, please contact Randy King, Certified Water Operator at 601-249-3502. We want our valued customers to be informed about their water utility. If you want to learn more, please attend our monthly board meeting,

which is held on the second Monday of each month at 5:30 p.m. at the fellowship of Calvary Baptist Church, 1013 Pricedale Dr., Summit, MS.

Description of Water Treatment Process

Your water is treated by disinfection. Disinfection involves the addition of chlorine or other disinfectant to kill dangerous bacteria and microorganisms that may be in the water. Disinfection is considered to be one of the major public health advances of the 20th century.

Additional Information for Lead

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. East Pike Water Association, Inc is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>.

Water Quality Data Table

In order to ensure that tap water is safe to drink, EPA prescribes regulations which limit the amount of contaminants in water provided by public water systems. The table below lists all of the drinking water contaminants that we detected during the calendar year of this report. Although many more contaminants were tested, only those substances listed below were found in your water. All sources of drinking water contain some naturally occurring contaminants. At low levels, these substances are generally not harmful in our drinking water. Removing all contaminants would be extremely expensive, and in most cases, would not provide increased protection of public health. A few naturally occurring minerals may actually improve the taste of drinking water and have nutritional value at low levels. Unless otherwise noted, the data presented in this table is from testing done in the calendar year of the report. The EPA or the State requires us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not vary significantly from year to year, or the system is not considered vulnerable to this type of contamination. As such, some of our data, though representative, may be more than one year old. In this table you will find terms and abbreviations that might not be familiar to you. To help you better understand these terms, we have provided the definitions below the table.

Contaminants	MCLG or MRDLG	MCL, TT, or MRDL	Detect In Your Water	Range		Sample Date	Violation	Typical Source
				Low	High			
Disinfectants & Disinfection By-Products								
(There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants)								
Chlorine (as Cl ₂) (ppm)	4	4	1.9	.9	2.9	2018	No	Water additive used to control microbes
Haloacetic Acids (HAA5) (ppb)	NA	60	5	5	5	2016	No	By-product of drinking water chlorination
Inorganic Contaminants								
Barium (ppm)	2	2	.0175	.0175	.0175	2016	No	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
Nitrate [measured as Nitrogen] (ppm)	10	10	.34	.34	.34	2018	No	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
Radioactive Contaminants								
Alpha emitters (pCi/L)	0	15	2.1	2.1	2.1	2018	No	Erosion of natural deposits
Radium (combined 226/228) (pCi/L)	0	5	.89	.89	.89	2018	No	Erosion of natural deposits
Contaminants	MCLG	AL	Your Water	Sample Date	# Samples Exceeding AL	Exceeds AL	Typical Source	
Inorganic Contaminants								
Copper - action level at consumer taps (ppm)	1.3	1.3	.1	2018	0	No	Corrosion of household plumbing systems; Erosion of natural deposits	
Inorganic Contaminants								
Lead - action level at consumer taps (ppb)	0	15	1	2018	0	No	Corrosion of household plumbing systems; Erosion of natural deposits	

Unit Descriptions	
Term	Definition
ppm	ppm: parts per million, or milligrams per liter (mg/L)
ppb	ppb: parts per billion, or micrograms per liter (µg/L)
pCi/L	pCi/L: picocuries per liter (a measure of radioactivity)
NA	NA: not applicable
ND	ND: Not detected

Unit Descriptions

NR	NR: Monitoring not required, but recommended.
----	---

Important Drinking Water Definitions

Term	Definition
MCLG	MCLG: Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
MCL	MCL: Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
TT	TT: Treatment Technique: A required process intended to reduce the level of a contaminant in drinking water.
AL	AL: Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
Variances and Exemptions	Variances and Exemptions: State or EPA permission not to meet an MCL or a treatment technique under certain conditions.
MRDLG	MRDLG: Maximum residual disinfection level goal. The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
MRDL	MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
MNR	MNR: Monitored Not Regulated
MPL	MPL: State Assigned Maximum Permissible Level

COMMUNITY CALENDAR

COMMUNITY CALENDAR appears in the Enterprise-Journal on Thursdays. Thursdays and Wednesdays. Times for any non-profit organizations can run for free in this section. Call the newsroom at 684-2421 during weekday business hours, fax it to 684-0346, bring it by the Enterprise-Journal office, e-mail it to news@enterprise-journal.com or mail it to Community Calendar, P.O. Box 2009, McComb, MS 39649.

GENERAL NEWS

ABSENTEE VOTING for the Aug. 6 primary election will begin Monday. People can cast absentee ballots at the circuit clerk's office 8 a.m. to 5 p.m. weekdays. The voter registration deadline is 5 p.m. July 8. Mail-in applications must be postmarked no later than July 8. Seventeen-year-olds who will be 18 on or before Nov. 5 are eligible to vote in the Aug. 6 primary. For more information, call 601-783-2581.

AMITE COUNTY NAACP will have a water registration drive and fish fry with platters for \$5 at the Penny Pincher Cafe in Gloster from 11 a.m. to 6 p.m. Friday.

CELEBRATE God and America, presented by the Pike County Baptist Association, is 7 to 9 p.m. Saturday, June 29, at the Southwest Mississippi Community College football stadium, with a patriotic program, free food, fun and fireworks.

COMMUNITY PRAYER meeting sponsored by Mission Pike County will be 7 a.m. Thursday at Pleasant Grove East McComb M.B. Church, 800 Pearl River Ave. in East McComb. All pastors and lay people in the Pike County area are invited.

JUNETEENTH celebration will be held 11 a.m. to 6 p.m. today at the Black History Gallery, 819 Wall St., McComb. Mayor Quindiah Lockley will speak. Bring a covered dish and lawn chairs. Politicians are welcome.

McCOMB RAILROAD DEPOT Museum will present Kids Day Celebration 9 a.m. to noon Wednesday at the depot with Miss Matie's Train Tales, museum tours, inflatable jumpers, T-shirts for sale, book giveaway, face painting and refreshments. Excel by a recertification is at 8:45.

MISSISSIPPI BLOOD Services will hold a blood drive 2 to 5 p.m. Thursday at FilLife SportsBar, 329 Ann Dr., McComb.

CHURCH NEWS

ABUNDANT LIFE Church of Delaware, 623 24th St., McComb, will have Inspirational Sunday, 11:15 a.m. Sunday. Guest speaker is actor, singer and writer, Joni Bovill. Call 601-248-4558 or 601-250-4470.

BETHLEHEM M.B. Church, 2131 Taylor Road, Magnolia, will celebrate Pastor Ralph Garner's 24th anniversary 1:30 p.m. Sunday. The Rev. Alfred Austin will speak. Sunday school is at noon.

BROWN CHAPEL will have its Friends and Family Day at 1 p.m. Sunday with the Rev. Gary Brumfield speaking and guests including the Fossil Hill M.B. Church choir, The New Gospel singers, Sis. Albertha Isaac and singer, actress, writer Joni Bovill.

EMERSON BAPTIST Church, Woodville, hosts a youth explosion at 5 p.m. Sunday with Elder Treveon Wells speaking.

EMPOWERING LIFE Christian Church, 600 S. Clark St., Magnolia, hosts A Night Out with Tea Burns & Dedicated, with The Gospel Upsetter, Tyun Marshall & the Guys, The Soul Consolators, Andrew Johnson and the Spiritual Disciples. Bishop Joe Carter and the Boys, Torelle and the Vocalaires, Oquavion, The Boston Singers and more at 6 p.m. today.

GETHSEMANE C.O.G.I.C., McComb, revival will be 7:30 p.m. Monday through Wednesday. Speakers in order are Elders David Nunamy, Emmanuel Heckett and Lempton Robinson.

KINGDOM RESTORATION Ministries will host the second annual Churches United Festival Saturday, June 29, at the Bo Diddley Pavilion in downtown McComb.

MESA MOUNT OLIVE Baptist Church will have family and friends day 1 p.m. Sunday. The Rev. James Jackson will speak.

MOUNT OLIVE BAPTIST Church, Highway 33 South, Centerville, revival is 7 p.m. Monday through Thursday with Pastor Percy L. Perkins speaking.

MOUNT ZION M.B. Church, Highway 584 East, Gilburg Road, Liberty, will have its June 21st noon Sunday with Sunday school at 10 a.m. The Rev. Zedric Washington will speak. Dinner will be served. Call 601-454-0992.

PINK HILL M.B. Church, McComb, will have family and friends day 1 p.m. Sunday with the Rev. Chad

Williams speaking. Morning service is at 11:15 with the Rev. Robin Baker.

ROSE BOWSER M.B. Church, 7505 Highway 24/48 West, Summit, will sponsor a "12 Tribes of Israel" program 3:30 p.m. Sunday. The Rev. W. Tobias will speak.

ST. PAUL M.B. CHURCH, 223 St. Paul Road, Tylertown, will honor Pastor Isaiah Jones for his eighth anniversary 2 p.m. Sunday. The Rev. Latimore McCoy will speak.

SHARON CHAPEL C.M.E. Church, 608 W. Walnut St., Gloster, will hold a pastor appreciation service for Pastor Pierre Hall and First Lady the Rev. Geneva Hall at 2 p.m. today. The Rev. Maxine Price of Carson will speak.

SHILOH M.B. CHURCH, Oryka, revival is 7 p.m. Monday through Thursday with Minister Claude Elyell speaking Monday and the Rev. Kendall Poole serving as the emcee for the week.

SMITHDALE C.O.G.I.C., 6347 Adams Road, will host "100 Women in Purple" 6 p.m. Sunday. Evangelist Alico Cameron Blakey of Clarksville, Tenn., will speak.

SUMMER'S CHAPEL F.W.B. Church, 6484 Highway 24 W., Liberty, will have a one-day revival 1 p.m. Sunday with guest speaker the Rev. Martin L. Washington.

SWEET HOME BAPTIST Church, Sweet Home and worship service is 11 a.m. Sunday, speaking.

SWEET HOME F.W.B. Church, Summit, will hold an installation service for the Rev. James Brown 1:30 p.m. Sunday. The Rev. Robert L. Gausby will speak.

WEST JERUSALEM Baptist Church, Liberty, will celebrate homecoming 11 a.m. Sunday. The Rev. Leffingwell Jones will speak.

WILLIAMS TEMPLE C.O.G.I.C., will have Sunday school at 11 a.m. Sunday and worship at noon.

VACATION BIBLE SCHOOL

ROSE HILL M.B. CHURCH, 6132 Highway 48 E., Magnolia, vacation Bible school is 6 to 8 p.m. Monday through Friday.

SWEET HOME F.W.B. Church, 7190 Enterprise Road, Summit, vacation Bible school. "What's the love got to do with it?" will be 5:30 to 7:30 p.m. Monday through Wednesday for all ages with refreshments each night.

BOARD MEETINGS

AMITE COUNTY SUPERVISORS meet 10 a.m. Tuesday at the courthouse in Liberty.

AMITE COUNTY SCHOOL board will hold a public hearing on the proposed annual budget 9:15 p.m. Thursday in the board room at 533 Magpie St., Liberty.

McCOMB CITY BOARD will meet 10 a.m. Friday at city hall.

McCOMB SCHOOL BOARD will meet 5:30 p.m. Tuesday in the administration building board room to approve the budget, followed by a work session.

SCHOOL NEWS

McCOMB SCHOOL DISTRICT application for Individuals with Disabilities Act Part B and preschool funds for the 2019-2020 school year is available at the administration building for input. A group meeting for parents of special education students will be held 10 a.m. Monday in the Deanna Junior High School auditorium. The application will be presented to the school board at 6 p.m. Tuesday, June 25.

SUPPORT GROUPS

ALCOHOLICS Anonymous meetings: Cornerstone Come as You Are Group meets noon Mondays and Thursdays, 7 p.m. Tuesdays, Wednesdays and Fridays, 10:30 a.m. Saturdays (literature study) and 6 p.m. Sundays at 216 Fifth St., two blocks south of Delaware Avenue in McComb (call 551-6040); East McComb Group meets at noon and 7:30 p.m. Mondays-Saturdays and 2 and 7:30 p.m. Sundays at the old food stamp office on Warren Road; Magnolia AA and NA meets 5:30 p.m. Mondays-Friday at Summit Mini Storage, 802 Walnut St., Summit, 10:30 a.m. Saturdays and Sundays, 8 p.m. Friday, 6:30 p.m. Saturday through Thursday, and a women's meeting at 5 p.m. Wednesday. Magnolia AA meets 5:30 p.m. Thursday through Saturday at the Magnolia Community Center. A Main Talk Line is 684-7457. Reach Out Group meets at 7:30 p.m. Thursdays at Walker's Chapel Baptist Church, 1003 Wall St., McComb. Liberty Group meets noon to 7 p.m. Fridays in the meeting room at Liberty Library, Tylertown. AA has open meetings at 7 p.m. Mondays and closed meetings at 7 p.m. Thurs-

days at Tylertown United Methodist Church, Meadville AA meets on the corner of Highway 81 and Bunbury Road, E. 30 p.m. Monday. Adult Children of Alcoholics (ACA) meet 4 p.m. each Sunday at the Summit AA hut.

ALA-TEEN meets 4 p.m. each Tuesday at the Wall, 614 S. Magnolia St., McComb. AL-ANON meetings: Friday night Summit family group meets at 6:15 Fridays at Summit Mini Storage, 709 Walnut St., Summit. ACDA meets 4 p.m. Sun-

days at the same location. Call 341-4507. CHRISTIAN SINGLES in Pike County and surrounding areas meet the second and fourth Saturdays to attend concerts, festivals, movies, restaurants, parks and other places of interest. Call 601-395-7336 for details.

DIVORCECARE meets 5:45 to 7:15 p.m. Wednesdays in the McComb First Baptist Church Youth Living Room. Childcare is provided. A special class will be held upstairs in room 202 for children ages 5-12. Workbooks are \$15 for each class.

Annual Drinking Water Quality Report
East Pike Water Association, Inc.
PWS #MS0570051
June 22, 2019

Is my water safe? We are pleased to present this Annual Water Quality Report. Compliance Certificate Report, as required by the State Drinking Water Act (SDWA). The report is designed to provide you with information about your water source, what we test for, and how we compare to state and federal agencies. This report is a snapshot of the water in your tap. It is an ongoing process with information because informed customers are the best effect.

It is not to be used as a general guide. Some people may be more susceptible to contaminants. A drinking water test can detect general contaminants. However, contaminants present in the water can undergo chemical reactions. Some people may be more susceptible to contaminants. People with chronic underlying conditions, pregnant women, and young children may be more susceptible to contaminants. Some elderly and infants may be particularly at risk from lead. These people should always consult with their doctor before using public water. For more information, call 601-248-4558 or visit our website at www.epwa.com.

Where does my water come from? Our water source is from the 24th Street well in the McComb Aquifer. Source water treatment and disinfection. The water is treated with chlorine to kill bacteria and viruses. The water is then filtered through a sand filter to remove any remaining chlorine. The water is then treated with a second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a tenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eleventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a twelfth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a thirteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fourteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fifteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventeenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eighteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a nineteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a twentieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a twenty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a twenty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a twenty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a twenty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a twenty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a twenty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a twenty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a twenty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a twenty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a thirtieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a thirty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a thirty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a thirty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a thirty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a thirty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a thirty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a thirty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a thirty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a thirty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fortieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a forty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a forty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a forty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a forty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a forty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a forty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a forty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a forty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a forty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fiftieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fifty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fifty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fifty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fifty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fifty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fifty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fifty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fifty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a fifty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixtieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a sixty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventy-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventy-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventy-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventy-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventy-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventy-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventy-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventy-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a seventy-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eightieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eighty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eighty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eighty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eighty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eighty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eighty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eighty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eighty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with an eighty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a ninetieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a ninety-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a ninety-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a ninety-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a ninety-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a ninety-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a ninety-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a ninety-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a ninety-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a ninety-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundredth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and tenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eleventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and twelfth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and thirteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fourteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fifteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventeenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eighteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and nineteenth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and twentieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and twenty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and twenty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and twenty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and twenty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and twenty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and twenty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and twenty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and twenty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and twenty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and thirtieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and thirty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and thirty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and thirty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and thirty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and thirty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and thirty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and thirty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and thirty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and thirty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fortieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and forty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and forty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and forty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and forty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and forty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and forty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and forty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and forty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and forty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fiftieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fifty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fifty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fifty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fifty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fifty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fifty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fifty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fifty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and fifty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixtieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and sixty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventy-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventy-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventy-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventy-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventy-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventy-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventy-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventy-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and seventy-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eightieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eighty-first dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eighty-second dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eighty-third dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eighty-fourth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eighty-fifth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eighty-sixth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eighty-seventh dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eighty-eighth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and eighty-ninth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and ninetieth dose of chlorine to maintain a residual level of chlorine in the water. The water is then treated with a hundred and ninety-first dose of chlorine to maintain a residual level of chlorine in the water.
