2019 CERTIFICATION**Consumer Confidence Report (CCR)**

Town of New Houlika / Houlika Washington Ext
Public Water System Name

0090003

0580023

List PWS ID #s for all Community Water Systems included in this CCR

The Federal Safe Drinking Water Act (SDWA) requires each Community Public Water System (PWS) to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the PWS, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. **You must email, fax (but not preferred) or mail, a copy of the CCR and Certification to the MSDH.** Please check all boxes that apply.

- Customers were informed of availability of CCR by: (*Attach copy of publication, water bill or other*)
- Advertisement in local paper (*Attach copy of advertisement*)
 - On water bills (*Attach copy of bill*)
 - Email message (*Email the message to the address below*)
 - Other _____

Date(s) customers were informed: 6/7/2020 6/17/2020 1/2020

- CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used _____

Date Mailed/Distributed: 1/1

- CCR was distributed by Email (*Email MSDH a copy*) Date Emailed: 1/2020

- As a URL _____ (*Provide Direct URL*)
- As an attachment
- As text within the body of the email message

- CCR was published in local newspaper. (*Attach copy of published CCR or proof of publication*)

Name of Newspaper: Chickasaw JournalDate Published: 6/17/2020

- CCR was posted in public places. (*Attach list of locations*) Date Posted: 1/2020

- CCR was posted on a publicly accessible internet site at the following address: _____

*(Provide Direct URL)***CERTIFICATION**

I hereby certify that the CCR has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the PWS officials by the Mississippi State Department of Health Bureau of Public Water Supply

[Signature] Mayor
Name/Title (*Board President, Mayor, Owner, Admin. Contact, etc.*)

Date 6-19-2020**Submission options (Select one method ONLY)**

CCR Deadline to MSDH & Customers by July 1, 2020!

2019 Annual Drinking Water Quality Report
 Town of New Houlika
 PWS#: 0090003 & 0580023
 June 2020

2020 JUN 11 AM 8:03

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Eutaw/McShan and Ripley Aquifers.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Town of New Houlika have received moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact David Ray at 662.542.3180. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of the month at 6:00 PM at 201 Walker Street.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2019. In cases where monitoring wasn't required in 2019, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

PWS ID#:0090003		TEST RESULTS						
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
8. Arsenic	N	2018*	1.3	.9 – 1.3	ppb	n/a	10	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes
10. Barium	N	2018*	.0401	.0338 - .0401	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2018*	3.8	1.8 – 3.8	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2015/17*	.1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride**	N	2018*	.285	.128 - .285	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories

17. Lead	N	2015/17*	2	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	N	2019	100000	No Range	PPB	0	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
Disinfection By-Products								
81. HAA5	N	2018*	3	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2019	1.12	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2019	1.5	.34– 2.72	mg/l	0	MDRL = 4	Water additive used to control microbes

PWS ID#: 0580023		TEST RESULTS						
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
10. Barium	N	2019	.0166	.0161 - .0166	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
14. Copper	N	2015/17*	.1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2019	.909	.76 – .909	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2015/17*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	N	2019	180000	170000 - 180000	PPB	0	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
Disinfection By-Products								
81. HAA5	N	2016*	4	3 - 4	ppb	0	60	By-Product of drinking water disinfection.
Chlorine	N	2019	1.7	0 – 2.22	mg/l	0	MDRL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2019.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Town of New Houlika works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

PROOF OF PUBLICATION

THE STATE OF MISSISSIPPI
COUNTY CHICKASAW

Before the undersigned authority of said county and state, personally appeared before Teresa Nichols, clerk of a public newspaper published in the City of Houston, County of Chickasaw, State of Mississippi, called the Chickasaw Journal, who, being duly sworn, doth depose and say that the publication of the notice hereto affixed has been made in said paper for 1 days, to-wit:

Vol. 114 No. 34 on the 17 day of June, 2020
Vol. ___ No. ___, on the ___ day of _____, 2020
Vol. ___ No. ___, on the ___ day of _____, 2020
Vol. ___ No. ___, on the ___ day of _____, 2020
Vol. ___ No. ___, on the ___ day of _____, 2020

Amanda Harris
Legal Ad Clerk

Sworn to and subscribed to this the 17 day of _____, 2020 before me, the undersigned Notary Public of said County of Chickasaw.

2019 Annual Drinking Water Quality Report
 Town of New Haven
 PWS# 0000001 & 0000002
 June 2020

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality of the water and services we provide to you every day. Our primary goal is to provide you with a clear and understandable report of drinking water quality. We have provided the information to help you understand the water treatment process and what our water contains. We will continue to work with you to improve the quality of our water. Our water comes from two water sources: the Connecticut and Housatonic Rivers.

The water quality assessment has been completed for our public water system to determine the overall quality of the drinking water supply to determine potential sources of contamination. A report containing detailed information to use for publically accessible water supply has been provided to the public water system and is available for viewing with consent. The work for the Town of New Haven has been completed including the following information:

If you have any questions about this report or concerning your water utility, please contact David Day at 860.441.3120. We want the highest satisfaction to be achieved about the water utility. If you need to learn more about water utility or our regular scheduled meetings, they are held on the first Tuesday of the month at 6:00 PM at 121 Water Street.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. The laws require that all of the drinking water suppliers that serve customers during the period of January 1st to December 31st, 2019, to share water quality information with their customers. The information includes the results of all of the monitoring for contaminants that are required by law. This information is provided to you in this report. The information includes the results of all of the monitoring for contaminants that are required by law. This information is provided to you in this report. The information includes the results of all of the monitoring for contaminants that are required by law. This information is provided to you in this report.

If the water you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - The concentration of a contaminant when, if exceeded, treatment of the water is required to reduce the concentration of the contaminant.

Maximum Contaminant Level Goal (MCLG) - The Maximum Contaminant Level (MCL) for a contaminant that is based on a health risk. MCLG is set at a level that is as low as possible without being technically infeasible.

Maximum Contaminant Level (MCL) - The MCL is the level of a contaminant in drinking water based on what there is or better or improved not to health. MCL is set for a range of water.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contamination.

Maximum Residual Disinfectant Level Goal (MRDLG) - The goal of a drinking water disinfectant level which does not pose a health or aesthetic risk of water. MRDLG is set at a level that is as low as possible without being technically infeasible.

Visit our website www.nh.gov or call us at 860.441.3120 for more information on our water utility and the quality of our water.

Visit our website www.nh.gov or call us at 860.441.3120 for more information on our water utility and the quality of our water.

For the purpose of this report, drinking water for specific contaminants is a monthly basis. Results of regular monitoring are as follows: if water is not at drinking water quality standards, it is not to be used for drinking water. If you have any questions about this report or concerning your water utility, please contact David Day at 860.441.3120.

If present, elevated levels of lead in your tap water could indicate a problem with your plumbing. Lead in drinking water is primarily from materials and components such as service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the quality of materials used in plumbing. To help you control lead in your drinking water, we have provided the following information: flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on how to do this is available on our website. For more information, visit www.nh.gov or call us at 860.441.3120.

All sources of drinking water are subject to natural contamination by substances that are naturally occurring in your water. These substances can be naturally occurring minerals and substances that are naturally occurring in your water. These substances can be naturally occurring minerals and substances that are naturally occurring in your water. These substances can be naturally occurring minerals and substances that are naturally occurring in your water. These substances can be naturally occurring minerals and substances that are naturally occurring in your water.

Some people may be more sensitive to contaminants in drinking water than the general population. Sensitive populations include: people with certain medical conditions, pregnant women, infants, children, and the elderly. These people should consult with their doctor about drinking water and their health. Some people may be more sensitive to contaminants in drinking water than the general population.
