## CERTIFICATION

I hereby certify that the Consumer Confidence Report (CCR) has been prepared and distributed to its customers in accordance with the appropriate distribution method(s) based on population served. Furthermore, I certify that the information contained in the report is correct and consistent with the water quality monitoring data for sampling performed and fulfills all CCR requirements of the Code of Federal Regulations (CFR) Title 40, Part 141.151 – 155.

Name

Title

Date

**2021 Annual Drinking Water Quality Report**  
**City of Pearl**  
**PWS#: 0610017**  
**April 2022**

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Sparta Sand Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for our system have received lower susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Chris Gale at 601.918.1718. We want our valued customers to be informed about their water utility. If you want to learn more, please attend the meetings scheduled for the first & third Tuesdays at 6:00 PM at the Pearl City Hall.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2021. In cases where monitoring wasn't required in 2021, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

*Action Level* - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

*Maximum Contaminant Level (MCL)* - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

*Maximum Contaminant Level Goal (MCLG)* - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

*Maximum Residual Disinfectant Level (MRDL)* - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

*Maximum Residual Disinfectant Level Goal (MRDLG)* - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

*Parts per million (ppm) or Milligrams per liter (mg/l)* - one part per million corresponds to one minute in two years or a single penny in \$10,000.

*Parts per billion (ppb) or Micrograms per liter* - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

*Picocuries per liter (pCi/L)* - picocuries per liter is a measure of the radioactivity in water.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
<b>Radioactive Contaminants</b>								
6. Radium 226 Radium 228	N	2019*	.82 .84	.33 - .82 No Range	pCi/L	0	5	Erosion of natural deposits
<b>Inorganic Contaminants</b>								
10. Barium	N	2021	.0015	.001 - .0015	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2021	2.4	.6 - 2.4	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2017/19*	.2	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2021	.161	.125 - .161	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2017/19*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	N	2019*	99000	89000 - 99000	ppb	0	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
<b>Disinfection By-Products</b>								
81. HAA5	N	2021	16.6	6.23 - 16.6	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2021	25.4	7.85 - 7.85	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2021	1	.9 - 2	ppm	0	MRDL = 4	Water additive used to control microbes

\* Most recent sample. No sample required for 2021.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", our system is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year in which average fluoride sample results were within the optimal range of 0.6-1.2 ppm was 10. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.6-1.2 ppm was 84%.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The City of Pearl works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

### 2021 Annual Drinking Water Quality Report City of Pearl PWS#: 0610017 April 2022

Present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water that you receive every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We have made the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to the quality of your water. Our water source is from wells drawing from the Sparta Sand Aquifer.

A feasibility study has been completed for our public water system to determine the overall susceptibility of its drinking water to potential sources of contamination. A report containing detailed information on how the susceptibility study has been furnished to our public water system and is available for viewing upon request. The wells for our public water system have lower susceptibility rankings to contamination.

For more information about this report or concerning your water utility, please contact Chris Gale at 601.918.1718. We want our customers to be informed about their water utility. If you want to learn more, please attend the meetings scheduled for the first 5:00 PM at the Pearl City Hall.

For contaminants in your drinking water according to Federal and State laws. This table below lists all of the contaminants that we detected during the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2021. In cases where monitoring data is not available, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of human activity, microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, industrial livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or use of herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and other chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial manufacturing, and can also come from gas stations and septic systems; radioactive contaminants, which can be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, regulations limit the amount of certain contaminants in water provided by public water systems. All drinking water, however, may be reasonably expected to contain at least small amounts of some contaminants. The important presence of these contaminants does not necessarily indicate that the water poses a health risk.

Some of the terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Violation of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Level (MCL) - The "Maximum Allowable" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as high as feasible using the best available treatment technology.

Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Infectant Level (MROL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Infectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk to health. The benefits of the use of disinfectants to control microbial contaminants.

1 Milligram per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

1 Microgram per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

1 pCi - picocuries per liter is a measure of the radioactivity in water.

### TEST RESULTS

Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/AQL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
<b>Contaminants</b>							
	2019*	.82 .94	.33 - .82 No Range	pCi/L	0	5	Erosion of natural deposits
<b>Microbial Contaminants</b>							
	2021	.0015	.001 - .0015	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
	2021	2.4	6 - 2.4	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
	2017/19*	.2	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
	2021	.16	.125 - .161	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
	2017/19*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems; erosion of natural deposits
	2019*	99000	89000 - 99000	ppb	0	0	Flowed Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
<b>By-Products</b>							
	2021	16.6	8.29 - 16.6	ppb	0	60	By-Product of drinking water disinfection.
	2021	25.4	7.85 - 7.85	ppb	0	80	By-product of drinking water chlorination.
	2021	0.0000	0.0000	ppm	0	MRDL = 4	Water additive used to control
