CERTIFICATION

I hereby certify that the Consumer Confidence Report (CCR) has been prepared and distributed to its customers in accordance with the appropriate distribution method(s) based on population served. Furthermore, I certify that the information contained in the report is correct and consistent with the water quality monitoring data for sampling performed and fulfills all CCR requirements of the Code of Federal Regulations (CFR) Title 40, Part 141.151 – 155.

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Meridian Lower Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the City of Ruleville have received moderate susceptibility rankings to contamination.

If you have any questions about this report or concerning your water utility, please contact Keith Christopher at 662.721.7098. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of the month at 6:30 PM at city hall.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2021. In cases where monitoring wasn't required in 2021, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS						
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL/MRDL	Unit Measure -ment	MCLG MCL Likely Source of Contamination
Inorganic Contaminants						
10. Barium	N	2019*	.0102	.006 - .0102	ppm	2 Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2019*	.9	.7 - .9	ppb	100 Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2017/19*	.3	0	ppm	1.3 AL=1.3 Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

16. Fluoride	N	2019*	.953	.706 – .953	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2017/19*	2	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	N	2019*	150000	No Range	ppb	0	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.

Disinfection By-Products

81. HAA5	N	2018*	6	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. THM [Total trihalomethanes]	N	2018*	15.51	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2021	.8	.5 – 1.01	Mg/l	0	MIRDL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2021.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", the Town of Ruleville is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year in which average fluoride sample results were within the optimal range of 0.6-1.2 ppm was 2. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.6-1.2 ppm was 17%.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The City of Ruleville works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

2021 Annual Drinking Water Quality Report
 City of Ruleville
 PWS#: 0670011
 June 2022

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is from wells drawing from the Meridian Lower Wilcox Aquifer.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the City of Ruleville have received moderate susceptibility rankings to contamination.

June 15, 2022

Scott Cooperwood Publisher

Sworn to and subscribed before me this the 20

day of June, 2022.

Holly Thamp Notary

ity and Woman Owned Business en-
ses are solicited to bid on this contract
me contractors and are encouraged to
inquiries regarding potential subcon-
ing opportunities, equipment, material
r supply needs.

TY OF MOUND BAYOU is an Equal Op-
nity Employer, and hereby notifies all
rs will be afforded the full opportunity
mit bids in response to this invitation
ill not be discriminated against on the
ds of race, color, religion, sex, nation-
in, age, disability, sexual preference,
al or veteran status, or any other le-
protected status in consideration for
ard.

successful bidder must comply with
avis-Bacon Act which requires that all
rs and mechanics shall be paid at
not less than those determined by the
tment of Labor to be prevailing for the
y. In which the project is located.

wner reserves the right to reject any
bids or to waive any informality in the
interest of the Owner.

ay be held by the Owner for a period
exceed 60 days from the date of the
ing of Bids for the purpose of reviewing
is and investigating the qualifications
ers, prior to awarding of the Contract.

LEIGHTON ALDRIDGE

Contracts will be awarded to the responsible
offeror whose proposal is written within a
competitive range and determined to be the
most advantageous for the program, all fac-
tors considered. Factors to be considered in
evaluating proposals and their relative impor-
tance are set forth below.

The Lead Paint Inspector shall perform all nec-
essary inspection services and make recom-
mendations to properly carry out the activities
in the project in accordance with the state and
federal law.

The contract will be on a fixed price basis.
Those desiring consideration should submit
proposals by the time and date above stated
and must include the following:

1. Qualifications - List of qualifications
of each staff person to be assigned to the
project.
2. Experience - Information regarding the
experience of the firm. Information sha
ll include
types of project activities undertaken.
3. Capacity for Performance - Identify the
numbers and titles of staff available to be
assigned to provide services.
4. Price - Price to carry out the activity

All proposals will be rated on the following

you are: NONE.

You are required to mail or hand-deliver a copy
of a written response to the Petition for Adop-
tion to: BOYD P. ATKINSON, Attorney at Law,
whose address is P.O. Box 427, Cleveland, Mis-
sissippi, 38732. You must also file the original
of your response with the Clerk of this Court
within a reasonable time afterward.

Your response must be mailed or delivered not
later than thirty (30) days after the 15th day of
June, 2022, which is the date of the first publi-
cation of this summons. If your response is not
so mailed or delivered, a judgment by default
will be entered against you for the money or
other things demanded in the petition.

You are further advised that the request in
the Petition for Adoption will be heard in the
Bolivar County Chancery Court located at the
Bolivar County Courthouse in Cleveland, Mis-
sissippi, on Monday, the 29th day of August,
A.D., 2022 at 9:30 o'clock a.m. before Hon.
Catherine Farris-Carter, Chancery Court Judge.

ISSUED under my hand and the seal of said
Court on this the 6th day of June, A.D., 2022.

BRENETT N. HAYNES, CHANCERY CLERK
P.O. BOX 789, CLEVELAND, MS 38732
