2021 Annual Drinking Water Quality Report  
 Town of Centreville  
 PWS#: 0790003  
 May 2022

RECEIVED  
 MSDH-WATER SUPPLY  
 APR 24 11:08:17

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

If you have any questions about this report or concerning your water utility, please contact the John White at 601.645.5218. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of the month at 6:00 PM at Town Hall.

Our water source is from wells drawing from the Miocene Series and the Citronelle Formation Aquifers. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Town of Centreville have received lower susceptibility rankings to contamination.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detected during the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2021. In cases where monitoring wasn't required in 2021, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

*Action Level* - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

*Maximum Contaminant Level (MCL)* - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

*Maximum Contaminant Level Goal (MCLG)* - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

*Maximum Residual Disinfectant Level (MRDL)* – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

*Maximum Residual Disinfectant Level Goal (MRDLG)* – The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

*Parts per million (ppm) or Milligrams per liter (mg/l)* - one part per million corresponds to one minute in two years or a single penny in \$10,000.

*Parts per billion (ppb) or Micrograms per liter* - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

<b>TEST RESULTS</b>								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure -ment	MCLG	MCL	Likely Source of Contamination
<b>Inorganic Contaminants</b>								
8. Arsenic	N	2019*	.8	No Range	ppm	n/a	10	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes
10. Barium	N	2019*	.0828	.044 -.0828	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits

13. Chromium	N	2019*	3.5	No Range	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
19. Nitrate (as Nitrogen)	N	2021	1.31	No Range	ppm	10	10	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Sodium	N	2019*	9000	5300 - 9000	ppb	0	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
<b>Disinfection By-Products</b>								
81. HAA5	N	2020*	7	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2021	2.69	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2021	.9	0 – 1.34	mg/l	0	MDRL = 4	Water additive used to control microbes

\* Most recent sample. No sample required for 2021.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Town of Centreville works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

2021 Annual Drinking Water Quality Report  
 Town of Centerville  
 PWS# 0790003  
 May 2022

We're pleased to present to you this year's Annual Drinking Water Quality Report. This report is designed to inform you about the quality of water services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We need your understanding and support to continue to improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

If you have any questions about this report or concerning your water utility, please contact Greg John, White at 601.548.5218. We would welcome you to be informed about your water utility. If you want to learn more, please attend any of our regularly scheduled "Meetings". They are held on the first Tuesday of the month at 6:00 PM at Town Hall.

Our water source is from wells drawing from the Miocene Series and the Cretaceous Formation Aquifers. The source water abstracted from these wells is treated by our water treatment plant to meet the overall acceptability of the drinking water supply. To identify potential source contamination, a report containing detailed information on how the susceptibility determinations were made has been attached to this report. A report containing detailed information on how the susceptibility determinations were made has been attached to this report. A report containing detailed information on how the susceptibility determinations were made has been attached to this report.

We routinely monitor for contaminants in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that we detect during the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2021. In cases where monitoring wasn't required, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and in some cases, radioactive materials, and can pick up substances or contaminants from the presence of animals or from human activities. Microbial contaminants, such as bacteria, viruses, and parasites, that may come from animal feces, farm animals, wildlife, and humans, and industrial, or domestic wastewater discharges, oil and gas production, mining, or farming practices, can also be found in drinking water. Inorganic substances, such as salts and metals, which can be naturally occurring or result from human activities, such as mining, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming practices, can also be found in drinking water. Synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also be found in drinking water. Inorganic substances, such as salts and metals, which can be naturally occurring or result from human activities, such as mining, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming practices, can also be found in drinking water. Synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also be found in drinking water. Inorganic substances, such as salts and metals, which can be naturally occurring or result from human activities, such as mining, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming practices, can also be found in drinking water.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms, we've provided the following definitions:

**Action Level** - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

**Maximum Contaminant Level (MCL)** - The Maximum Allowable (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as is feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG)** - The goal (MCLG) is the level of a contaminant in drinking water below which there is no or expected risk to health. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL)** - The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG)** - The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Parts per million (ppm) or Milligrams per liter (mg/l)** - one part per million corresponds to one minute in two years or a single penny in \$10,000.

**Parts per billion (ppb) or Micrograms per liter** - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or % of Samples Exceeding MCL/GAL	Unit - Maximum	MCLG	MCL	Likely Source of Contaminant
<b>Inorganic Contaminants</b>								
As Arsenic	N	2019*	3	No Range	ppm	10	10	Erosion of natural deposits from arsenic, result from oil and electronics production
10. Barium	N	2019*	2829	2M - 4000	ppm	2	2	Discharge of drilling water, discharge from metal refineries, erosion of natural deposits
13. Chromium	N	2019*	3.5	No Range	ppm	100	100	Discharge from steel and pig iron, erosion of natural deposits
18. Nitrate as Nitrogen	N	2021	1.21	No Range	ppm	10	10	Runoff from fertilizer used on farm fields, seepage of natural deposits
Sodium	N	2019*	6000	4000 - 9000	ppb	0	0	Road Salt, Water Treatment Chemicals, Water Softening Residuals
<b>Disinfection By-Products</b>								
HAA5	N	2020*	7	No Range	ppb	0	100	The Product of drinking water disinfection
THM4 (Total Trihalomethane)	N	2021	2.88	No Range	ppb	0	100	The Product of drinking water disinfection
Chlorine	N	2021	3	0.5 - 1.5	ppm	0	MRDL: 4	Water Disinfection Used to remove microorganisms

\* Most recent sample. No sample required for 2021.

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal requirements. We have learned through our monitoring and testing that some contaminants have been detected, however they are determined that your water is SAFE at these levels.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health requirements. In all cases, if a violation occurs, we will immediately notify you and our customers via email, text, or other means. We will also immediately notify you and our customers via email, text, or other means. We will also immediately notify you and our customers via email, text, or other means.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in water is primarily from materials and components associated with service lines and home plumbing. Our water system is required to provide high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water is sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before you drink or cook. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Act (<http://www.epa.gov/lead-in-water>). The Missouri State Department of Health (MSD) Health Laboratory (Jesse) (601) 578.7822 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or from man-made. These can be microbes, inorganic or organic chemicals, and radioactive substances. All drinking water, including bottled water, may sometimes contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more susceptible to contamination in drinking water than the general population. Infants, immunocompromised persons, persons with cancer, pregnant women, persons who have had organ transplants, people with HIV/AIDS, people with kidney disease, some elderly, and infants can be particularly at risk from exposure. These people should consult with their health care providers about appropriate means to lessen the risk of infection by cryptosporidium and giardia. Microbiological contaminants are available from the Safe Drinking Water Hotline (800) 426-4791.

The Town of Centerville works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
