Distribution (Methods used to distribute CCR to our customers)

I. CCR directly delivered using one or more method below:

- *Provided direct Web address to customer
- Hand delivered
- Mail paper copy
- Email

*Add direct Web address (URL) here:

Example: "The current CCR is available at www.waterworld.org/ccrMay2023/0830001.pdf call (000) 000-0000 for paper copy".

II. Published the complete CCR in the local newspaper.

Date(s) published: Weekend Edition
May 6-7, 2023

III. Inform customers the CCR will not be mailed but is available upon request.

List method(s) used (examples - newspaper, water bills, newsletter, etc.).

Date(s) notified:

May 23, 2023 water bill
Location distributed:

IV. Post the complete CCR continuously at the local water office.

"Good Faith Effort" in other public buildings with the water system service area (i.e. City Hall, Public Library, etc.)

Date:

Locations posted:

Certification

This Community public water system confirms it has distributed its Consumer Confidence Report (CCR) to its customers and the appropriate notices of availability have been given and that the information contained in its CCR is correct and consistent with the compliance monitoring data previously submitted to the MS State Department of Health, Bureau of Public Water Supply and the requirements of the CCR rule.

Submittal

Email the following required items to water.reports@msdh.ms.gov regardless of distribution methods used.

1. CCR (Water Quality Report)
2. Certification
3. Proof of delivery method(s)

2022 Annual Drinking Water Quality Report
Sun Creek Water Association, Inc.
PWS#: 0130003
April 2023

RECEIVED
MSDH-WATER SUPPLY
2023 APR 26 AM 10:30

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

Contact & Meeting Information

If you have any questions about this report or concerning your water utility, please contact Heather Springer at 662.552.3210. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Monday of each month at 6:00 PM at the Sun Creek Water Office Building.

Source of Water

Our water source is from wells drawing from the Gordo Formation and Eutaw Formation Aquifers. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Sun Creek Water Association have received moderate susceptibility rankings to contamination.

Period Covered by Report

We routinely monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1st to December 31st, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent testing done in accordance with the laws, rules, and regulations.

As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

Terms and Abbreviations

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level (AL) : The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level (MCL): The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per billion (ppb) or micrograms per liter: one part by weight of analyte to 1 billion parts by weight of the water sample.

Parts per million (ppm) or Milligrams per liter (mg/l): one part by weight of analyte to 1 million parts by weight of the water sample.

TEST RESULTS

Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Inorganic Contaminants								
8. Arsenic	N	2022	3.1	1.5 – 3.1	ppb	n/a	10	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes
10. Barium	N	2022	.133	.0301 - .133	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2022	1.5	.5 – 1.5	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2020/22	.5	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
16. Fluoride	N	2022	1.6	.176 – 1.6	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
17. Lead	N	2020/22	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Sodium	N	2021*	184	144 - 184	ppm	0	0	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
Disinfection By-Products								
81. HAA5	N	2022	2.13	No Range	ppb	0	60	By-Product of drinking water disinfection.
82. TTHM [Total trihalomethanes]	N	2022	5.88	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2022	1.2	0 – 1.77	Mg/l	0	MDRL = 4	Water additive used to control microbes

* Most recent sample. No sample required for 2022.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

LEAD INFORMATION

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

VIOLATIONS

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or

other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Sun Creek Water Association, Inc. works around the clock to provide top quality water to every tap. The Directors and Staff are always ready and happy to help customers with any problem or complaint. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

OBITUARIES

Virginia Mitchell Edwards

On the evening of April 17, 2023, Virginia Mitchell Edwards died suddenly in her home and was reunited with her late husband Col (Ret.) Olis Herbert Edwards (Ret.) Olis Herbert Edwards was her high school sweetheart, love of her life, and beloved husband of 65 years. Virginia and Olis lived an Air Force life for the next twenty-two years. Living in Little Rock, Arkansas; Merced, California; Columbus, Mississippi; Fairborn, Ohio; and Auburn, Alabama. During those years Virginia was an active and supportive Air Force wife, raised three children, and attended both Auburn University and Wright State University, graduating in 1977 from Wright State with her Bachelor of Education Degree in English and Journalism. Once they retired from military service and moved back to Auburn, Virginia received a Master of Education degree from Auburn University. The daughter of a school teacher, Virginia always had

Edwards

a passion for teaching and young people. After the Air Force years, Virginia taught high school English and Journalism for twenty years. She taught for two years at Hartsboro High School and seventeen years at Nottoway High School, retiring in 1996. During her teaching career, Virginia won numerous awards, being recognized as Nottoway Secondary Teacher of the Year (four times), Mason County Secondary Teacher of the Year, Tuskegee Opusist Club Recognition Award, Phi Delta Kappa Award for Excellence in Teaching, and Alabama Scholastic Press Association Journalism Advisor of the Year. She was very proud of the Nottoway High School yearbook that she was in charge of for many years. Despite her recognition as an exceptional teacher, she always felt that her greatest accomplishment as a teacher was always her students, and love from her students. One only has to talk with her former students, or read their written tributes on social media, to

bear the outpouring of love and the impact she had on so many young lives.

In addition to loving her students, Virginia had a gift for making friends and staying in touch with them through the years. She had strong beliefs regarding what was important in life - Faith, Family, and Friends. "She loved everyone," so many friends have said. She was optimistic, didn't sweat the small stuff, believed "Let go and let God" and rarely ever got in a hurry. Virginia was always very active in church - Lakeview Baptist and most recently Auburn United Methodist - both in Auburn, AL. She attended McGehee-Lacy Sunday School class, several Bible Studies, including the J.O.Y. Bible study where she served as leader, and recently served on the Administrative Board of AUMC. Her Christian faith was always a priority for her and a huge part of her life.

Despite her success as a teacher and her involvement in church, her greatest joy was her three children and watching them grow into successful, responsible adults. She loved being a mother and a grandmother, and she will be deeply missed by them. Virginia is survived by her children - Sherry Edwards of Alpharetta, GA, Gary Edwards (Anna) of Marietta, GA, and Candi Edwards Averra (Dave) of Auburn, AL. She and Olis Herbert have five grandchildren - Garrett Edwards, Lena Averra Cooper (Drew), Meredith Averra, Sydney Folghorn, and Cazy Averra Nation (Sean), her brother-in-law Bobby Edwards, many nieces and nephews, and her beloved cat, Halle. She was preceded in death by her husband, Col (Ret.) Olis Herbert Edwards, who passed in 2020, and by her parents, Eulan and Lena Mae Mitchell, and two brothers, Calvin Mitchell and Kirby Mitchell.

A Celebration of Life service will be held on May 13 at 1:00 PM in the chapel of Jefferson-Train Funeral Home in Opelika, AL. Interment will take at Auburn Memorial Park Cemetery, Auburn, AL. A time of visitation with family will be held following the services at the family home. To honor Virginia Edwards, please send any memorial gifts to St. Jude's Children's Hospital, the Dupuy Foundation of America, or a charity of your choice.

2022 Annual Drinking Water Quality Report Sun Creek Water Association, Inc.

PWS# 0130003
April 2023

We are pleased to present to you the year's Annual Quality Report. This report is designed to inform you about the quality of water and services we deliver to you every day. Our overall goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continuously improve the water treatment process and protect our water resources. We are committed to delivering the quality of your water.

Contact & Reporting Information:
If you have any questions about the report or something you see on this report, please contact Customer Service at 360.560.2272. We want our valued customers to be informed about the water they use. If you want to report a problem, please direct any of our requests, comments, or concerns to the contact information on the back of this report. We will respond to you as quickly as possible.

Report of Water:
Our water source is from wells tapping into the Tertiary Formation and Ocala Formation Aquifers. The water source is not contaminated by our public water system by the natural substances of the drinking water supply. Identified potential sources of contamination, if any, are not expected to affect the water quality. The water quality is not expected to be affected by our public water system and is not expected to be affected by our public water system. The water is not expected to be affected by our public water system.

Public Comment by Report:
The annual report for contaminants in your drinking water according to federal and state laws. This report is based on data of all monitoring points of January to December 31, 2022, or unless otherwise specified. We are committed to providing you with the most accurate information possible. We are committed to providing you with the most accurate information possible.

As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive substances. Some of these substances, such as lead, radon, and arsenic, which can be naturally occurring in our water supply, may be harmful to your health. Some of these substances, such as lead, radon, and arsenic, which can be naturally occurring in our water supply, may be harmful to your health. Some of these substances, such as lead, radon, and arsenic, which can be naturally occurring in our water supply, may be harmful to your health.

Tastes and Odors:
If you notice any tastes or odors in your drinking water, you may want to contact us. We will investigate the cause of the problem and take appropriate action. We will investigate the cause of the problem and take appropriate action.

Lead:
Lead is a naturally occurring substance in our water supply. It can be harmful to your health. We are committed to providing you with the most accurate information possible. We are committed to providing you with the most accurate information possible.

Radon:
Radon is a naturally occurring substance in our water supply. It can be harmful to your health. We are committed to providing you with the most accurate information possible. We are committed to providing you with the most accurate information possible.

Other Contaminants:
We are committed to providing you with the most accurate information possible. We are committed to providing you with the most accurate information possible.

TEST RESULTS							
Contaminant	Median %	1st Collected	Last Collected	Range of Results in %	1st Collected	Last Collected	Lead Source or Contaminant
Inorganic Contaminants							
4 Nitrate	%	280	1	1-11	200	100	1. Some nitrate levels may be high due to natural sources and some may be due to agricultural runoff.
10 Sulfate	%	300	100	100-110	200	100	1. Sulfate is a naturally occurring substance in our water supply.
10 Chloride	%	200	1.0	1-1.5	200	100	1. Chloride is a naturally occurring substance in our water supply.
10 Calcium	%	100	1.0	1-1.5	200	100	1. Calcium is a naturally occurring substance in our water supply.
10 Magnesium	%	200	1.0	1-1.5	200	100	1. Magnesium is a naturally occurring substance in our water supply.
17 Total Hardness	%	200	1.0	1-1.5	200	100	1. Total hardness is a measure of the amount of calcium and magnesium in our water supply.
10 Total Dissolved Solids	%	200	1.0	1-1.5	200	100	1. Total dissolved solids is a measure of the amount of inorganic substances in our water supply.

2022 Annual Drinking Water Quality Report Sun Creek Water Association, Inc.

PWS# 0130003

April 2023

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality of water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continuously improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

Contact & Meeting Information

If you have any questions about this report or concerning your water utility, please contact Heather Springs at 602-562-3210. We want our reporting customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the second Monday of each month at 6:00 PM at the Sun Creek Water Office Building.

Source of Water

Our water source is from wells tapping from the Gadsden Formation and Elyse Formation Aquifers. The source water is treated to protect the public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to the public water system and is available for viewing upon request. The wells for the Sun Creek Water Association have received individual susceptibility ratings for contamination.

Period Covered by Report

We routinely monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of the monitoring period of January to December 31, 2022. In cases where reporting wasn't required in 2022, the table reflects the most recent testing data in accordance with the laws, rules, and regulations.

As water flows over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity. Inorganic contaminants, such as nitrates and borates, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife. Organic contaminants, such as nitrates and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming. Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses. Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can lead to smog from gas stations and septic systems. Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA provides regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

Terms and Abbreviations

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level (MCL): The "Maximum Achievable" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLG as is feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The Goal (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety. **Maximum Residual Disinfectant Level (MRDL):** The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per billion (ppb) or micrograms per liter: one part by weight of analyte to 1 billion parts by weight of the water sample.

Parts per million (ppm) or milligrams per liter: one part by weight of analyte to 1 million parts by weight of the water sample.

TEST RESULTS

Contaminant	Violation	Unit	Health	Level	Range of Detects	Unit	MCLG	MCL	Leading Source of Contamination
	YN		Cohort	(ppb)	in 1 of 10 samples	Measure			
Inorganic Contaminants									
8. Arsenic	N	ppb	2.4	0-3.1	ppb	0.05	10	10	Errosion of natural resources, runoff from agriculture, runoff from gas and electronics production wastes
15. Boron	N	ppm	1.83	0.67 - 1.33	ppm	2	2	2	Discharge of drilling wastes, discharge from mining activities, erosion of natural deposits
13. Chlorine	N	ppm	1.5	0 - 1.5	ppm	100	100	100	Discharge from steel and other mills, erosion of natural deposits
14. Copper	N	ppm	0	0	ppm	1.3	AL=1.3	AL=1.3	Corrosion of household plumbing systems, erosion of natural deposits, leaching from brass pipes
16. Fluoride	N	ppm	1.5	1.76 - 1.5	ppm	4	4	4	Errosion of natural deposits, water pipes which promote strong acid, discharge from fertilizer and phosphate fertilizer
17. Lead	N	ppb	0	0	ppb	0	AL=1.5	AL=1.5	Corrosion of household plumbing systems, erosion of natural deposits
Sulfate	N	ppm	184	144 - 184	ppm	0	0	0	Rock Salt, Waste Treatment Chemicals, Borax Salts, and Sewage Effluents
Disinfection By-Products									
21. HAA5	N	ppm	0.13	No Range	ppm	0	0	0	By-product of drinking water disinfection
22. THM5, Total Trihalomethanes	N	ppm	0.34	No Range	ppm	0	0	0	By-product of drinking water disinfection
Chlorine	N	ppm	1.7	0-1.77	Mg/L	0	MRDL=4	MRDL=4	Water additive used to control microbes

†Initial report sample. No sample required for 2022.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems compliance with monitoring requirements, MSDM now notifies systems of any missing samples prior to the end of the compliance period.

LEAD INFORMATION

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/leadwater/lead>. The Massachusetts State Department of Health Public Health Laboratory offers lead testing. Please contact 601-876-7582 if you wish to have your water tested.

VIOLATIONS

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected however the EPA has determined that your water IS SAFE at these levels.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be synthetic, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health-care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1-800-426-4791.

The Sun Creek Water Association, Inc. works around the clock to provide top quality water to every tap. The Directors and Staff are always ready and happy to help customers with any problem or complaint. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

Subject: sun creek water ccr report

MR. MYRON TOLD ME TO GET IN TOUCH WITH YOU ABOUT THE CCR REPORT. EVERY YEAR, I ONLY DO THE NEWSPAPER PRINTING. I SEE AFTER READING OVER AND , THAT I AM TO DO NUMBERS 2, 3, AND 4. I THOUGHT IT WAS JUST ONE OF THOSE.

I WILL POST CCR IN THE OFFICE AND RUN THAT CUSTOMERS CAN GET A COPY IN THE OFFICE ON THE BILLS BEING SENT OUT ON THE 23RD OF THIS MONTH. ALSO, I WILL RESEND THE CERTIFICATION LETTER TO YOU AT THE OTHER EMAIL ADDRESS. WILL THIS CATCH ME UP TO DATE ON EVERYTHING?? I'M SORRY FOR MESSING UP!!!
