<input checked="" type="checkbox"/> III. Inform customers the CCR will not be mailed but is available upon request. List method(s) used (examples -- <u>newspaper</u> , water bills, newsletter, etc.).	Date(s) notified: 5/13-14, 2023 Location distributed:
<input checked="" type="checkbox"/> IV. Post the complete CCR continuously at the local water office. <input type="checkbox"/> "Good Faith Effort" in other public buildings with the water system service area (i.e. City Hall, Public Library, etc.)	Date: 5/13/2023 Locations posted:
Certification	
This Community public water system confirms it has distributed its Consumer Confidence Report (CCR) to its customers and the appropriate notices of availability have been given and that the information contained in its CCR is correct and consistent with the compliance monitoring data previously submitted to the MS State Department of Health, Bureau of Public Water Supply and the requirements of the CCR rule.	
Name: 	Title: Operator Date: 5-22-23
Submittal	
Email the following required items to water.reports@msdh.ms.gov regardless of distribution methods used. 1. CCR (Water Quality Report) 2. Certification 3. Proof of delivery method(s)	

2022 Annual Drinking Water Quality Report
Town of Guntown
PWS ID# 0410006
May 9, 2023

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water source is two wells. Our wells draw from the Eutaw Formation.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for Guntown water System have received a moderate susceptibility ranking to contamination.

I'm pleased to report that our drinking water meets all federal and state requirements.

If you have any questions about this report or concerning your water utility, please contact Lee Davis at (662)-348-5353. We want our valued customers to be informed about their water utility. If you want to learn more, please attend any of our regularly scheduled meetings. They are held on the first Tuesday of each month at 5:30 P.M. at the Town Hall.

Guntown Water Dept. routinely monitors for constituents in your drinking water according to Federal and State laws. This table shows the results of our monitoring for the period of January 1st to December 31st, 2022. As water travels over the land or underground, it can pick up substances or contaminants such as microbes, inorganic and organic chemicals, and radioactive substances. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Treatment Technique (TT) - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

Maximum Contaminant Level - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

MRDL: Maximum residual disinfectant level. The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants

TEST RESULTS								
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measurement	MCLG	MCL	Likely Source of Contamination
Disinfectants & Disinfection By-Products (There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.)								
Chlorine (as Cl ₂) (ppm)	N	2022	1.70	1.22—2.20	Ppm	4	4	Water additive used to control microbes
Inorganic Contaminants								
Barium	N	*2019	0.136	0.126—0.136	Ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
Fluoride	N	*2015	.108	.107--.108	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
Chromium	N	*2017	2.0	No-range	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
Copper	N	*2020	0.1	.005--.2589	ppm	1.3	AL-1.3	Corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives
TTHM (total trihalomethanes)	N	2022	1.23	No-Range	Ppb	0	80	By-product of drinking water chlorination
HAA5	N	2022	1.17	No-Range	Ppb	0	60.0	By-product of drinking water chlorination
Unregulated Contaminants								
Sodium	N	2022	19,000	17,000—19,000	Ppb	250,000	250,000	Road salt, Water treatment chemicals, Water softeners, and Sewage effluents

*Most recent sample. No sample was required in 2022

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted.

*****Additional Information for Lead*****

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. **The City of Guntown** is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/safewater/lead>. Please contact 601-576-7582 if you wish to have your water tested.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

Your CCR will not be mailed to you however; you may obtain a copy at the by calling 662-348-5353 if you have questions.

2023 Annual Drinking Water Quality Report

Town of Clanton
 PWS ID# 611966
 May 9, 2023

We're pleased to present to you this year's Annual Water Quality Report. This report is designed to inform you about the quality of water and services we deliver to you every day. Our objective is to provide you with a full and detailed report of drinking water. We want you to understand the efforts we make to consistently improve the water treatment process and ensure the water flowing from your tap is safe and healthy.

The water treatment plant has been completed for our public water system to demonstrate the overall responsibility of the drinking water supply to a satisfied customer. A report containing detailed information on how the water quality performance was maintained in our public water system and its availability for various uses required. The water for Clanton water system has received a maximum compliance ranking to demonstrate.

We're pleased to report that our drinking water meets all federal and state requirements.

If you have a new customer about this report or a concern about water quality, please contact Joe Davis at 662-548-5551. We want your feedback to be included in our future water quality reports. If you need to learn more about water quality, we're happy to help. We're also available to help you understand the quality of your water. We're committed to providing you with the highest quality water possible.

Drinking Water Report summary results for compliance in your drinking water according to federal and state laws. This table shows the results of our monitoring for the period of January 1st to December 31st, 2022. As water flows into the plant, it can pick up substances or contaminants such as sediment, iron, manganese and organic materials, and radioactive substances. All drinking water, including bottled drinking water, has the potential to contain a small amount of these substances. The likelihood is that the presence of these substances does not necessarily pose a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

As required: The concentration of a contaminant which, if exceeded, requires treatment or other requirements under state law.
As treated: The maximum concentration of a regulated pollutant intended to reduce the level of a contaminant in drinking water.
Maximum Contaminant Level (MCL): The maximum amount of a regulated pollutant that is allowed in drinking water.
Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health.
MCLD: The maximum contaminant level goal for a contaminant that is not subject to drinking water. There is no known or expected risk to health from a contaminant that is not subject to drinking water.

TEST RESULTS

Contaminant	Units	Date	As Treated	As Required	As Detected	As MCLD	MCLG	MCL	Notes
Chlorine	mg/L	5/1/23	1.0	1.0	1.0	1.0	1.0	1.0	Water quality good in central water line
Iron	mg/L	5/1/23	0.3	0.3	0.3	0.3	0.3	0.3	Exceeded MCLG due to iron in water
Manganese	mg/L	5/1/23	0.05	0.05	0.05	0.05	0.05	0.05	Exceeded MCLG due to manganese in water
Lead	ppb	5/1/23	0.01	0.01	0.01	0.01	0.01	0.01	Exceeded MCLG due to lead in water
Copper	ppb	5/1/23	1.3	1.3	1.3	1.3	1.3	1.3	Exceeded MCLG due to copper in water
Total Dissolved Solids	mg/L	5/1/23	500	500	500	500	500	500	Exceeded MCLG due to total dissolved solids in water
Calcium	mg/L	5/1/23	100	100	100	100	100	100	Exceeded MCLG due to calcium in water

Water Quality Report - Not required to be provided to 2023
 Informational information for consumers
 If you are a new customer about this report or a concern about water quality, please contact Joe Davis at 662-548-5551. We want your feedback to be included in our future water quality reports. If you need to learn more about water quality, we're happy to help. We're also available to help you understand the quality of your water. We're committed to providing you with the highest quality water possible.
