## 2022 Annual Drinking Water Quality Report Standard Dedeaux Water Association PWS#: MS 0230063

May 2023

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water.

## Contact & Meeting Information

If you have any questions about this report or concerning your water utility, please contact Linda McKay, Administrator at 228.255.6800. We want our valued customers to be informed about their water utility. Please attend meeting scheduled for the second Tuesday of each month at 6:00 PM at 24084 Standard Dedeaux Road, Kiln, MS 39556.

## Source of Water

Our water source is from wells drawing from the Graham Ferry Formation Aquifer. The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Standard Dedeaux Water Association have received lower susceptibility rankings to contamination.

## Period Covered by Report

We routinely monitor for contaminants in your drinking water according to federal and state laws. This report is based on results of our monitoring period of January 1st to December 31st, 2022. In cases where monitoring wasn't required in 2022, the table reflects the most recent testing done in accordance with the laws, rules, and regulations.

As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some contaminants. It's important to remember that the presence of these contaminants does not necessarily indicate that the water poses a health risk.

## Terms and Abbreviations

In the table you may find unfamiliar terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Maximum Contaminant Level (MCL): The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG): The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary to control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per billion (ppb) or micrograms per liter: one part by weight of analyte to 1 billion parts by weight of the water sample.

Parts per million (ppm) or Milligrams per liter (mg/l): one part by weight of analyte to 1 million parts by weight of the water sample.

				TEST F	RESULT	ΓS		
Contaminant	Violation Y/N	Date Collected	Level Detected	Range of Detects or # of Samples Exceeding MCL/ACL	Unit Measure- ment	MCLG	MCL	Likely Source of Contamination
Inorgani	ic Conta	aminan	its					
10. Barium	N	2022	.0049	.00480049	ppm	2	2	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits
13. Chromium	N	2022	.9	.59	ppb	100	100	Discharge from steel and pulp mills; erosion of natural deposits
14. Copper	N	2019/21*	.1	0	ppm	1.3	AL=1.3	Corrosion of household plumbing systems; erosion of natural deposits leaching from wood preservatives
16. Fluoride	N	2022	.132	.128132	ppm	4	4	Erosion of natural deposits; water additive which promotes strong teeth discharge from fertilizer and aluminum factories
17. Lead	N	2019/21*	1	0	ppb	0	AL=15	Corrosion of household plumbing systems, erosion of natural deposits
Unregula	ited Co	ntamin	ants					
Sodium	N	2021*	48	46.8 - 47	ppm	20	NONE	Road Salt, Water Treatment Chemicals, Water Softeners and Sewage Effluents.
Disinfect	ion By	Produ	cts					
81. HAA5	N	2022	22.8	No Range	ppb	0	60	By-Product of drinking water disinfection.
32, TTHM Total rihalomethanes]	N	2022	1.74	No Range	ppb	0	80	By-product of drinking water chlorination.
Chlorine	N	2022	1.7	1.27 - 1.82	mg/l	0	MRDL = 4	Water additive used to control microbes

<sup>\*</sup> Most recent sample. No sample required for 2022.

Sodium. EPA recommends that drinking water sodium not exceed 20 milligrams per liter (mg/L). Excess sodium from salt in the diet increases the risk of high blood pressure and cardiovascular disease.

We are required to monitor your drinking water for specific contaminants on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

## LEAD INFORMATION

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

## VIOLATIONS

As you can see by the table, our system had no violations. We're proud that your drinking water meets or exceeds all Federal and State requirements. We have learned through our monitoring and testing that some contaminants have been detected, however the EPA has determined that your water IS SAFE at these levels.

## **UNREGULATED CONTAMINANTS**

Unregulated contaminants are those for which EPA has not established drinking water standards. The purpose of unregulated contaminant monitoring is to assist EPA in determining the occurrence of unregulated contaminants in drinking water and whether future regulations are warranted.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man-made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk, More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1.800.426.4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

The Standard Dedeaux Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.

## 2022 ANNUAL DRINKING WATER QUALITY REPORT STANDARD DEDEAUX WATER ASSOCIATION

## PWS#: MS 0230063 | MAY 2023

We're pleased to present to you this years Amuel Quality Weter Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of dinking water. We went you to understand the efforts we make to continuely improve the water treatment process and protect our water resources. We are committed tolerastring the quality of your water.

Contact 3. Resetting information,
If you have any questions about this report of concerning your water fully, phoase contact Linda McKey, Administrator at 228.285.8800.

We want our valued captomers to be informed about their water fully. Pleases albund meeting conclude for the Second Tuesday of each month at 6:00 Philat 24/84 Standard Declears Road, Kilo, MS 39556. de rette reng, a dollone

## Source of Weter

Source of Weter

Our water source is from wells drawing from the Greham Ferry Formation Aquifur. The source water assessment has been completed for our public water system to determine the overall cuscoptibility of its digiting water supply to identify potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The water for the Standard Dedeator Water Association have received lower susceptibility rankings to contamination.

Period Covered by Report:

We routnely monitor for contaminantly in your dunking water according to federal and state laws. This report is based on results of our monitoring period of January 1º to December 31º, 2022. In added where monitoring water's required in 2022, the tobic reflects the most recent testing done in accordance with the laws, pales, and regulations.

As water travels over the surface of land or underground, it dissolves naturally countring minerals and, in some cases, radioactive meterials and can pick up substances or contaminants from the presence of animals or from human, activity, microbial contemplations, such as viruses and bectoria; that may come from sewages treatment, plants, septic systems, admittant fivestock operations, and wildlife; introgratio contaminants, such as satts and metals, which can be resturably occurring or result from under attemment and visible; in order to the service of minings posterior or result from understanding, which may be production, mining, or firmings; posterior and harbicides, which may come to make a productive of industrial processes and perfect of contaminants, including synthetic and visibile organic chamicals, which are by-producted of industrial processes and perfect including any come from pass stations and supple systems; radioactive contaminants, which can be neutrally occurring or to be the result of an distance of the service of the neutral of the service of the service of the neutral of the service of the se

Terms and Abbreviations
In the table you may find unfamiliar ferms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system

Meximum Contaminant Level (MCL): The "Maximum Alloyed" (MCL) is the highest level of a contaminant that is allowed in criming, water. MCLs are set as close to the MCL as as fessible using the best available treatment technology.

Maximum Contembrant Level Goal (MCLG). The 'Goal' (MCLG) is the level of a contaminant in dinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Dispreciant Level Instruct. The trighest juvid of a distractant allowed in drinking water. There is convincing evidence that addition of a distractant is necessary to control microbial conteminants.

Maximum Residual Distributed Level Goal (MRDLG): The level of a danking water distributant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of deinfoctants to control microbial contembrants.

Parts per billion (pop) or microscoms per live; one pant by weight of enable to 1 billion parts by weight of the water sample.

Parts per million (com) or Milliorems per filer (mail); one part by weight of analyte to 1 million parts by weight of the water sample.

## Water Quality Report

**Drinking Water Quality Report (Consumer Confidence Report)** 

Each year we make available a short report that tells where your water comes from and what is in it. See below for the most recent report available, or call our office and we will gladly assist you.

Good Afternoon Nel.

You've been so kind in the past to post our annual Water Quality Report on your builetin board. I've attached it again this year in hopes you can post it again. Please let me know if you have any questions.

Thanks so much!

Linda
